STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

High temperatures have stimulated crop development as a whole, helped retail trade in light summer-wear goods and improved reorder business for the latter with jobbers, all these influences favoring some growth of the feeling that early poor starts in crops and trade have been largely made up for. There is about the usual midsummer quiet in future trade lines, but fall samples are prepared, low-rate excursions begin next month, shipments of fall goods are increasing, and collections have improved at various markets. Industry exhibits a lull in some lines, notably iron and steel in its cruder forms, though the immediate effect of the strike of iron-ore miners in Minnesota has been to stimulate, temporarily at least, the demand for pig iron at all markets. Lumber is quiet, especially at the south, where production is being curtailed, and prices are easier as a whole. It is significant, however, that one of the country's basic industries—coal—is very active at the west, with general stocking up reported, and good quality bituminous coal sells well at the east. Another industry showing marked activity is that of jewelry manufacturing, which is apparently showing no sign of a summer shutdown. The crops, as above intimated, seem to be doing well. The cold spring has been followed by a hot summer, and much lost time has been regained, especially in corn and cotton. At the present writing the outlook is for heavier yields of these crops, oats and late vegetables than earlier expected, but wheat estimates do not tend to enlarge materially. Bank clearings show effects of summer quiet in reduced totals as compared with last week, and aggregates fall below a year ago, although outside of New York gains are still notable over 1906. Prices of staples show strength, cotton leading, with cereals firmer on reaction from late weakness. Money is still firm for long time accommodation, interior banks are closely loaned up, and shipments of currency to move crops are reported from the southwest. Call rates at New York reflect local influences and are easy. Speculation in securities shows more public participation, and a few securities have been sharply marked up. Building activity is less marked in the country as a whole, and real-estate speculation has been curtailed.

Crop reports to BRADSTREET'S, while more irregular than of late, are on the whole very good, considering the poor early start. Rains in the west have benefited corn, except in Iowa, where they have been too heavy and long continued, but there is complaint of damage to harvested wheat, hay and oats by too much moisture. Wheat-threshing reports are irregular, with better reports from Kansas and Missouri. The former state sends estimates of 50,000,000 to 70,000,000 bushels. Kentucky will have a fair average crop, Ohio only two-thirds of a crop and Indiana and Illinois are very irregular. It is this irregularity which renders accurate estimation very difficult, if not impossible. Spring wheat reports are fair. Rumors of poor conditions are numerous, but simmer down to predictions of a short crop in North Dakota and of isolated rust reports in parts of the Dakotas and Minnesota. Rust seems more prevalent in oats than in wheat, however. Tomato crops promise well, and tobacco has improved, but is still below the average promise.

Temperatures near or above 100 degrees throughout the south have not seemed to affect the tone of crop reports until near the close of the week, when Arkansas, Tennessee and parts of Georgia sent complaints of dry weather affecting corn and cotton. Texas, the New Orleans district and the south Atlantic district send good reports. Louisiana sugar promises well, and the rice harvest shows a large crop of good quality.

Demand for pig iron has improved a little, but the markets are still dull. In some instances prices have been shaded and spot iron is being offered more freely in Pittsburgh. Whatever improvement has developed is attributed to the strikes of dockmen on the upper Lake Superior ports and of the Mesaba miners, which, however, have had little effect as yet on production, as the furnaces are pretty well supplied with ore. These two occurrences will render it improbable that as much as 42,000,000 tons of ore will be carried down this season. Upward of 4,000 tons of open-hearth billets have been sold by an eastern mill to Pittsburgh interests, the quotation being $30 a ton at maker's mills. Negotiations are being conducted for the purchase of 15,000 tons of Bessemer pig in the Pittsburgh district. Some fair-sized orders for structural material have been taken, but none of the large contracts that have been pending for some time past have been placed as yet. Lake vessel builders furnish most of the demand for plates and shapes. Orders for about 5,000 box cars have been placed within the week, which will eventually call for a heavy tonnage of plates. New domestic business in steel rails is light, but some good-sized foreign orders have been taken, Japan, Mexico and Australia figuring in the deals. Demand for cotton ties is being curtailed to some extent because of the fear of a short cotton crop. Old material remains quiet and prices continue to decline. Coke is firmer, the warm weather being responsible for curtailment in outputs. Coal is in good demand in the west, where supplies are being stocked. In the east high-grade coal is quite active at good prices. Electrolytic copper is slightly higher, but the general market remains dull, and there seems to be an impression that a large buying movement will not set in until the metal works lower—to about 20 cents, say.

Sugar is more active than of late, raws advancing 10 points on light receipts and good buying, while refined declined 5 points because of the backward season. Present tendencies are for an improvement in demand and a high range of prices, which are now slightly above those of a year ago.

Wool is stronger, sales are larger and prices tend up for long staple wools. London sales closed earlier than expected because of large withdrawals, and low-grade wools closed lower than expected, while high grades were firm.

Stock market activity at New York increased this week, and there was apparently some enlargement of public participation. Southern Pacific was the principal feature, having a substantial advance on fairly definite assurances that its dividend rate will be increased to 6 per cent. next week. The Steel stocks were unfavorably influenced by the iron ore miners' strike, but rallied on later advices that the disturbance in question was subsiding. The general list shows strength, with a moderate reaction from early high prices. Bonds are also slightly more active. Foreign exchange has been strong on a steady inquiry for remittances, with a restricted supply of bills. Demand sterling is 4.87.10.

Bank clearings for the week ending July 25 aggregate $2,511,740,000, 12 per cent. less than last week and five-tenths of 1 per cent. under this week last year. Outside of New York exchanges amount to $1,031,011,000, 9 per cent. below last week, but 6 per cent. over the week last year.

Business failures for the week ending July 25 number 155, against 177 last week, 171 in the like week of 1906, 197 in 1905, 174 in 1904 and 190 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending July 25 aggregated 2,376,543 bushels, against 2,210,770 bushels last week, 1,708,705 bushels this week last year and 6,974,526 bushels in 1901. For the first four weeks of the fiscal year the exports are 9,950,931 bushels, against 6,942,290 bushels in 1906-07 and 21,000,194 bushels in 1901-02. Corn exports for the week are 1,665,044 bushels, against 2,066,967 bushels last week and 539,073 bushels in 1906. For the fiscal year to date the exports are 6,554,4[illegible]0 bushels, against 2,662,553 bushels in 1906-07.

IN CANADA.

Trade in Canada is active for a midsummer season, largely because hot weather has stimulated trade in light goods. Building is active and labor is well employed, general complaint being made, in fact, that the supply of the latter is unequal to the demand. Collections are good from eastern Canada, reflecting good trade in the country districts, but collections from the northwest are backward and money is very tight, necessitating shipments from the United States. It is felt that the stringency, if not relieved, may arrest industrial development in the western provinces. Preparations are making for a large fall trade, but reorders for summer goods keep dry-goods houses busy. Hardware is in active request. British Columbia lumber mills, which have been shut down since June 1, are expected to reopen August 1. Clearings for the week aggregate $82,168,467, a decrease of 7 per cent. from last week, but a gain of 14.7 per cent. over 1906. Failures for the week number 27, as against 26 last week and 24 in this week a year ago.

CROP REPORTS.

RAIN HELPS CORN, EXCEPT IN IOWA, BUT HURTS HARVESTED CROPS OF WHEAT, OATS AND HAY. CORN LITTLE BEHIND, EXCEPT IN IOWA. GOOD REPORTS FROM MISSOURI, INDIANA AND ILLINOIS. SPRING-WHEAT REPORTS IRREGULAR. NORTH DAKOTA YIELD WILL BE SHORT. RUST REPORTS SCATTERED AND NO DAMAGE APPARENT. WINTER-WHEAT THRESHINGS IRREGULAR. KANSAS ESTIMATES RANGE FROM 50,000,000 TO 70,000,000 BUSHELS. MISSOURI OUTLOOK GOOD. KENTUCKY, FAIR CROP INDICATED. OHIO, TWO-THIRDS OF A CROP PROMISED. VERY HIGH TEMPERATURES SOUTH DO NOT IMPAIR CONDITION OF COTTON, EXCEPT IN ARKANSAS. GOOD REPORTS FROM TEXAS, LOUISIANA AND GEORGIA. GOOD SUGAR AND LARGE RICE CROP. TOBACCO BETTER, BUT BELOW AVERAGE. TOMATO CROP IN MARYLAND GOOD.

CHICAGO.—Most reports from the northwest indicate improvement in spring-wheat conditions where there has been plenty of moisture, but a few sections have had too much rain. Wheat is in the flower in some parts of the northwest and is beginning to head in North Dakota. Black rust has been discovered in central Minnesota and at a few points in North Dakota, but unless the weather is favorable for its development, nothing serious is anticipated. Advices from the Canadian northwest are irregular, poor-crop sections reiterating their reports more extensively than are the good ones. Threshing and the marketing of winter wheat has been delayed by wet weather in the central regions and part of the southwest. Yields in Kansas continue irregular, ranging from 3 to 25 bushels to the acre. A yield of 10 bushels for the state would give a crop of over 50,000,000 bushels. Threshing in Illinois ranges from 25 to 50 bushels, and in Indiana 15 to 40 bushels. Oats have been damaged in Iowa by heavy rains and rust, and in Nebraska by rust. Cutting in Illinois has been delayed by heavy rains. Yields are irregular, ranging from 15 to 50 bushels. Corn has advanced rapidly under an abundance of moisture and hot weather. A few scattered points in Kansas, Oklahoma and Texas which recently complained of it being too wet are now sending reports of injury by hot winds. The corn condition generally is 2 to 5 points better than July 1 throughout the belt, but on lowlands in Iowa corn has been damaged by heavy rains. Haying is delayed by too much rain.

CINCINNATI.—The crop situation improves daily. Wheat is mostly threshed. The yield so far shows about two-thirds of a crop.

INDIANAPOLIS.—Wheat continues to be harvested and the yield varies according to locality, likewise the quality. The latter is said to be excellent in some quarters, but in others it is said to be only fair. Corn is improving steadily, and it is believed that a very excellent crop will be made. Hay harvesting has been more or less delayed on account of rainy weather, which is believed to have done some damage.

TERRE HAUTE.—As wheat threshing progresses the crop is found to be a little uneven in some localities. Hay prospects are encouraging, although rain may cause some damage. Farmers are very hopeful of securing a fair corn crop, river-bottom corn being as fully developed as it usually is at this season of the year; upland growth is small but of good color and promising.

ST. PAUL.—Good growing weather has prevailed throughout Minnesota and North Dakota during the past ten days. There is plenty of rain and warm temperatures. Much of the grain in North Dakota was already spoiled, but backward grain has been given an impetus that warrants an estimate of a yield of ten bushels per acre. Better barley and flax crops are looked for than last year. Barley and oats will be cut in about a week. Corn has made very rapid progress, and with a late fall will do well. Garden stuff and fruits are abundant.

LOUISVILLE.—A fair wheat crop has been harvested in this state. The tobacco crop will be about 80 per cent. of an average, with quality not up to standard.

MINNEAPOLIS.—The crop outlook is favorable. Weather conditions are satisfactory. Crops are rapidly maturing. Some depressing rumors come from scattered localities, but authentic reports are in the main favorable to a fair crop.

DAVENPORT.—The weather has been warm, with numerous showers. Good corn weather, but not so good for harvesting of hay, barley and oats.

DES MOINES.—Corn has sustained a probable loss of acreage by wind and flood. The loss is more than double the year's increase of acreage. With future favorable weather conditions the final yield will be fairly good. Oats, spring wheat and barley have suffered materially from wet weather and windstorms.

SIOUX FALLS.—Crops are doing well, rye and barley now being harvested.

SIOUX CITY.—Corn is growing well. Wheat and rye are being harvested and hay is being cut. Dry weather is needed.

OMAHA.—Field work has been retarded considerably on account of heavy rains, which have damaged small grain in some parts of the state. Corn is making rapid growth.

ST. LOUIS.—Weather conditions are favorable to the corn crop, which bids fair to furnish the largest yield in years. Threshing of wheat continues and is turning out better than anticipated. In many sections the yield is from 35 to 40 bushels per acre and of exceptionally fine quality.

ST. JOSEPH.—Local storms have damaged corn, but its general condition is good.

KANSAS CITY.—Growing corn has made some gain during the week, and the outlook for that crop is more favorable. Wheat threshing is in full progress, and returns confirm the early estimates of a yield of 70,000,000 bushels in Kansas.

WICHITA.—Threshing is in full swing. The yield of wheat is light but of good quality. Corn is in fine condition, though needing rain in some localities.

BALTIMORE.—The outlook is promising for a large tobacco crop.

RICHMOND.—The hay and wheat crops, which averaged fair to good, have been harvested. Cotton shows improvement, and the weather generally has been favorable to all growing

crops. Large shipments of melons to northern markets are noted.

SAVANNAH.—Cotton crop weather conditions continue favorable and a large yield is expected in Georgia.

ATLANTA. — Cotton continues to improve rapidly under hot sunshine and frequent showers.

AUGUSTA.—Cotton is growing nicely and the weather is very favorable.

MACON.—Tropical weather has parched all crops which need rain.

JACKSONVILLE.—Plentiful rains refresh crops.

BIRMINGHAM.—Crops continue to improve.

MONTGOMERY.—Improvement is noted in crops and the outlook is fairly promising.

MOBILE.—Cotton is developing nicely and with a late fall an average crop should be made.

MEMPHIS.—Corn and cotton have made good progress up to the present, but now need rain. Fields are clean and free from grass.

LITTLE ROCK.—Dry weather continues and crops are being badly damaged. Unless rain falls within the next week corn will be practically ruined and cotton damaged 50 per cent.

NEW ORLEANS. — Weather conditions are exceptionally good for crops. Cotton is growing rapidly in this section and reports indicate it to be healthy. Sugar cane is promising and the rice harvest is commencing. The yield of the latter crop is larger than last season and the quality good.

DALLAS.—Cotton is making rapid advancement under ideal weather conditions and there are but few complaints of weevil.

FORT WORTH.—Beneficial rains have fallen and cotton and corn have been much improved. Grass is in good condition for cattle, and the outlook is more promising than for some weeks, though southwest Texas remains dry. There are some complaints of boll weevil in central Texas.

WACO.—Conditions are favorable to cotton.

SPOKANE.—Wheat is ripening rapidly and the harvest will soon be under way. A large crop is expected, with good prices.

TRADE REPORTS.

At New York a good volume of business has been done in nearly all departments of the dry-goods trade. Cotton goods continue in active demand at firm prices. Silks are in good request. Men's-wear woolens are fairly active. Hosiery and underwear are in moderate request. In dress goods, trade is fair. In clothing, trade is still quiet; collections are good. Demand for worsted and woolen yarn is active, and prices, which are already high, tend to advance. Manufacturers of men's furnishings have received some good orders for fall; collections are slow. Jobbers of knit goods have had a good spring trade and expect a successful fall season. In cloaks and suits business is quiet; fall samples are about ready; collections are good; retail trade is helped by hot weather. Artificial flowers and feathers are in good demand, but makers of women's hats are doing poorly. Hat makers threaten to strike, but as trade is dull the effect is small. Manufacturers of furs report a number of advance orders. The rag and shoddy market is quiet. Cotton cordage is high and manufacturers have advanced prices accordingly. American hemp twine is in good demand and manufacturers are behind on orders. Sole and upper leather are very dull, but tanners are holding prices. Goatskins are very weak, and there is talk of still further curtailing production. Flour jobbers buy when wheat advances, but withdraw when wheat declines. Out-of-town orders for groceries are fair, but local sales are small. Canned fruits are in good demand. Trade in hardware is larger than usual at this season, and there has been some improvement in collections. Importers of china and glassware who have returned from Europe report difficulty in obtaining supplies, and domestic manufacturers are booking large orders. Pig iron is in better demand. Copper is very dull and lower prices are expected. The electrical and machinery trades are active; collections are somewhat slow. Leaf tobacco and cigars are very quiet. Drugs and chemicals are dull. Whiskies and brandies are quiet, but native and imported wines are in good demand. Receipts of live stock are small, and it is a seller's market. Dressed meats about meet the demand. Receipts of old hay and straw are heavy and prices are lower. Business in all kinds of paper, except book, is fair to good. Prices tend upward, and wrapping paper will be advanced in August. Real estate is dull. Payments in the building line are slow, and a number of speculative propositions have been foreclosed.

The following telegrams show trade conditions at the cities mentioned for the week ending July 26:

BOSTON.—Business in chemicals compares favorably with that of the corresponding period last year. Drugs are moving well for the season; morphine has advanced 15 cents per ounce; camphor is steady; opium is rather slow. Tanning materials and dyestuffs show little activity. Business in furniture, carpets, upholstery, lace curtains and pianos is of satisfactory volume for the season, but collections are only fair. Painters' supplies, with the exception of a drop of 1 cent in linseed oil, show no change in prices, trade being very fair for this time of the year. Builders' supplies are steady in price, but in quiet demand. All lines of lumber are quiet, prices showing no marked change. Anthracite coal dealers report many orders for July shipment. Soft coal is quiet. Retail trade in hard coal is very good for this time of the year, and prices are steady. Wholesale liquor dealers report having had a fair trade. Light wines are in good demand. Leaf-tobacco dealers say that there is no change in market conditions; prices continue high, and manufacturers are purchasing for immediate wants and are not making usual profits. Conditions in the wholesale grocery trade are seasonably quiet, with collections rather slow. The New England mackerel fleet had a good season, and, as a rule, made money. Shoe shipments from Boston for the week were as follows: Last week, 95,950 cases; preceding week, 82,252; last year, 98,545; total for 1907, 2,731,904; total for 1906, 2,845,732; decrease, 113,828.

PROVIDENCE. — The manufacturing jewelry trade shows a healthy condition for summer months, and prospects for fall trade are excellent. The cotton market remains firm, with prices advancing. Worsted goods manufacturers report a steady trade. Wholesale liquor trade is of good volume, brewers reporting a large amount of business. In the machinery and tool line deliveries are hard to secure and prices hold well up.

PORTLAND, ME.—Some small labor troubles exist in this state. Summer resorts are well patronized and transportation companies are doing a good business.

PHILADELPHIA.—Wool prices are firm, with trading quiet. Manufacturers who are not supplied are buying only for their needs. Dry-goods and notion jobbers report a good demand from out-of-town customers. Local retail trade is quiet; collections fair. Flour is moving slowly and the market rules rather weak, jobbers and bakers being well supplied for immediate needs. Chemicals and dyestuffs are reported very dull, though prices continue quite firm. Paints and glass are in active request, and there is now a large volume of business being done in staple grades. Wholesale lumbermen report business dull, but retailers are busy and the market rules strong, prices being firm. Hides and skins are dull, with small demand and full supply. Slight concessions are made in prices. Glazed kid demand is fair, supply full and no change in prices. Leather shows no change, demand being fair and supply good. Shoe dealers report business slightly off, with prices unchanged and an anticipated business of fair volume. Tobacco is quiet; purchases in most lines are small and for present use, buyers still seeking goods about 2 cents a pound lower than what is asked. If there is any leading feature it is the call for Zimmer Spanish, heretofore selling at 17 cents, but which grows scarcer and is now held at 19 cents firm. Cigar manufacturers are fairly busy. Liquor distillers as well as wholesalers are moving few goods. Retailers in the heart of the city during convention week did a very large business; those in the outer districts very little—less than usual, in fact—so that the gain in one section is offset by loss in the other. The reported quiet in iron has developed into decided dullness, trade during the past week being the lightest in a long time. There were practically no orders placed for deliveries late in the year. No change in prices has been announced, but concessions and prompt deliveries are obtained without trouble. Production is maintained and old orders keep manufacturers fairly busy, but uncertainty respecting prices apparently inclines buyers to await developments. For bituminous coal of established quality there is a fair demand at stable prices.

PITTSBURGH. — Pig-iron markets are quieter. There are practically no sales nor inquiry at this time. A small tonnage of spot basic iron is available, but there is no demand for same. Bessemer is well cleaned up and there is none in the market for immediate delivery. In finished lines the mills are, on an average, probably ninety days behind their orders, with a seasonable let-up in new bookings. The output of coke is large and shipments on old contracts continue heavy. Prices are firm at present quotations. Valley furnace quotations for spot pig iron are nominally as follows: Standard Bessemer, $23 to $23 50; chilled basic, $23; No. 2 foundry, $25, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2 50 to $2.60, and foundry coke, $3.25 to $3.50.

BUFFALO.—Trade at wholesale and retail is active. Wholesalers in clothing, dry goods, boots, shoes, hardware and building supplies, while they state that inclement weather affected their sales somewhat in the spring, now report that sales exceed those of last year. Collections are irregular, but on the whole fairly satisfactory.

BALTIMORE.—Buyers in fair numbers are on from Alabama, Florida and Georgia and are buying in the usual quantities. Jobbers expect a large number of buyers the first week in August by way of Jamestown. An advance of ½ per cent. is noted in prints and other lines of dry goods, and stocks are practically bare; sales at retail are of fair volume. Retail clothing merchants, as well as those in men's furnishings and straw hats, report a seasonable business. In shoes, jobbers have started delivering fall goods and report orders in excess of 1906, with the usual July business being done in filling-in orders; the stock of tan shoes has been practically disposed of by wholesalers, who, owing to increased demand, have placed orders for next year, and a number of tanneries have already sold their output in this line. A falling off in Maryland leaf-tobacco receipts is noted, but prices continue firm, with good demand for the better grades; Ohio leaf is active, with receipts liberal and prices fair; in seed leaf, some inquiry is being made for good tobacco by manufacturers. An improved condition is reported by wholesale grocers; the canned-goods report shows the market pretty well cleaned up; packers are now engaged on string beans and berries, and the last pack of peas is reported practically all sold; high prices prevail in all lines of goods. Summer dullness prevails in lumber, the chief demand being for material for suburban building; box manufacturers continue very busy; a lack of buying is attributed to the fact that plants and yards stocked up rather heavily during the winter and spring season, expecting a material advance in prices which did not materialize, and consequently prevailing lumber prices are somewhat lower. While the demand for money is somewhat easier, rates continue unchanged at 6 per cent., with increased inquiry at that rate from out-of-town sources. Collections generally show a slight improvement. Wholesale druggists report business normal, with fair collections. Prospects for increased southern business this fall are regarded as very encouraging.

CINCINNATI.—Business continues light.

CHICAGO.—The usual midsummer quiet prevails, but warm weather has favored jobbing and retail trade in summer goods, and reorders have been liberal with a majority of the dry-goods houses. Shipments of fall goods are increasing. Business in iron and steel has slackened slightly, new orders for most finished products being smaller, except for structural material, which is having a heavy sale. Railroads continue to hold off in the purchase of rails until the controversy over quality and weight is settled, and buy only small lots. Contracts have been let this month for seven large lake steamers, and three more are pending. They will want 35,000 tons of steel plates. Railroads have bought 6,000 box cars within a few weeks. Deliveries of steel generally are good. Buying of pig iron has improved moderately for 1908, but spot business is slow. Bituminous coal is having a larger sale, as the interior is stocking up, and railroads are having a larger traffic than last year. A majority of western railroads say that their general tonnage is better than last year and the car supply larger. Sales of lumber are below last year's. Furniture is selling less freely and manufacturers have smaller orders. Butter prices are firm and eggs higher. The produce trade generally is good. Live stock has averaged higher. Receipts have decreased. Money is strong and demand good. Banks are closely loaned up. Collections generally are fair, except from the Pacific coast, where returns are slow.

INDIANAPOLIS.—In the leather and wholesale paper trades business is dull. Implement houses report a good demand for farm tools.

TERRE HAUTE.—Summer clearing sales, while apparently good, do not appear to have been as brisk as in former seasons. Sales in the wholesale and jobbing district show no decided increase, although they compare favorably with last year's.

ST. LOUIS.—Jobbers of dry goods, notions, shoes, millinery, hats and kindred lines report business very satisfactory. Dry-goods merchants are busy packing and shipping advance orders and are preparing to meet the trade when they visit the open market. Manufacturers of shoes are complaining that they are unable to get leather in such quantities as they would like. In clothing, orders booked for fall shipment exceed last year's. Demand for better grades is increasing and prices are well maintained. Manufacturers of ladies' skirts are running to full capacity on orders for early shipment. Groceries are in good demand, especially canned goods. Drugs, paints, oils and glass show a slight falling off. Tanners have more orders than they can well handle. Prices are high and good hides are scarce. Hardware, both shelf and heavy, continues active at firm prices. Building materials show some improvement. Manufacturers of machinery report business very quiet. Clearance sales continue among department stores with good results. Collections in general are good. Money is firm at 5½ to 6 per cent. on good commercial paper. Banks and trust companies have shipped considerable money to the interior to take care of the wheat crop, which is just beginning to move.

LOUISVILLE.—Business in all manufacturing and jobbing lines is quiet. Retailers report large clearance sales at cut prices. Whiskey is seasonably quiet, but the price remains firm. Country merchants report business in this territory fairly good. Collections are only fair.

KANSAS CITY.—Trade with jobbers in leading lines continues active, with satisfactory increase in sales as compared with last year. Retail trade and collections are good.

MILWAUKEE.—The unusual hot spell of weather has created demand for seasonable goods with jobbers and retailers. Collections are fair.

SIOUX CITY.—Trade is good, above last year's. Collections are improving.

DAVENPORT.—Retail trade is about equal to last year's. Collections are fairly good.

ST. PAUL.—Business in all lines continues very active, and last year's figures are greatly outstripped. Collections for July have been very good. Money due last fall is coming in.

MINNEAPOLIS.—Business conditions generally are regarded as equal to if not better than last year's. Jobbers in most lines are satisfied with sales. Collections are fairly good for the season.

OMAHA.—Exceedingly warm weather has stimulated retail trade in summer merchandise very materially. Jobbers report trade about normal. Collections are fairly good.

LINCOLN. — Business has improved in some lines. Collections are fair.

RICHMOND.—Manufacturers of trunks, bags and leather novelties continue to do an active business. Those engaged in this line in Richmond and Petersburg have extended their territory, are now marketing their products throughout the country, and some foreign shipments are noted. Factories are working at full capacity, and with some demand exceeds the supply. Orders for dry goods for future shipment are larger, and in volume about equal those of the same period last year. The lumber industry is not so active, prices show a considerable decline, and manufacturing has in some instances been curtailed. Retail trade is active, with collections fair.

SAVANNAH.—Collections show an improvement over last week.

AUGUSTA.—Trade continues fair.

ATLANTA.—There appears to be an improvement in orders in nearly all wholesale lines and the only source of complaint is that regarding collections, but this appears to be only temporary. Traders look for a prosperous fall.

MACON.—Trade remains dull and collections are slow.

JACKSONVILLE.—Trade is fair for a hot season, with country orders undiminished. Collections are lagging.

BIRMINGHAM.—Demand for iron is fairly strong, with inquiries more brisk. Other lines of business are fairly good, but collections are slow.

MOBILE.—Fall orders are being placed freely and the volume is about the same as last year's. Collections are 25 per cent. less as compared with

one year ago, although the volume is about the same. Retail trade is rather active, with collections fair. The reaction which was expected in the lumber market is slow in coming, and the market is very quiet. Demand and output are steady.

MONTGOMERY.—Trade is quiet with jobbers and retailers. Collections are slow.

CHATTANOOGA.—Trade is favorable. Building continues active.

MEMPHIS.—Retail business is quiet. Wholesale trade is improving with unusually hot weather.

NASHVILLE.—Business conditions are satisfactory. Demand varies from brisk to slow in seasonable and unseasonable lines. Manufacturers are running up to their capacity. Money is plentiful at 6 per cent. Both retail and jobbing trade have shown improvement during the week and collections have been satisfactory.

LITTLE ROCK.—Extremely hot weather during the past week affected all lines of business and caused consternation among farmers, the temperature at some points reaching over 100 degrees at different times. Collections are slow.

NEW ORLEANS.—Retail trade is seasonable and is of good volume. Grocery jobbers are rather active filling small orders, while clothing, shoes and dry-goods people report good fall bookings. Collections are good for the summer season, and money is easier than usual.

FORT WORTH.—Trade conditions are fairly satisfactory, but collections are a little slow.

DALLAS.—In jobbing lines the usual summer dullness prevails. Retailers are stimulating trade with clearance sales. Collections are quiet.

WACO.—Trade is fair. Collections are slow.

SAN FRANCISCO.—All interest is focussed on the rehabilitation of the municipal government, which is progressing steadily. Interior canneries are thriving and fruit growers are realizing high prices.

SEATTLE.—Jobbers in almost all lines report business as good, but collections are still a little slow. Some of the shingle mills have shut down temporarily to curtail output and maintain prices. Lumber shipments are going forward more rapidly.

SPOKANE.—General business is good and collections are fair.

TACOMA.—Business in lumber and logging is somewhat quiet, which, in turn, affects hardwood and building materials. Retail trade, particularly furnishings and dry goods, is active.

PORTLAND, ORE.—The volume of business transacted by jobbers and retailers exceeds that of any previous midsummer season. Collections continue good.

TORONTO.—Trade here continues large. The demand for wholesale summer lines keeps active, and a good retail movement is reported from all parts of the country. This is between seasons with dry-goods jobbers, but sorting orders are still fair. All attention is directed toward fall business, which, at this writing, promises well. Foreign manufacturers are being pressed to rush forward all orders. They are somewhat behind. The hardware movement is heavy. The demands for general lines are brisk. Values generally hold firm. Wholesale grocers report a good trade. Canned goods are very firm, and sugar prices also show an advancing tendency. Collections from Ontario are generally fair to good; those from western Canada show but little improvement. Money continues somewhat scarce here and rules firm. Local industries continue active. The demand for labor is good and wages keep up. Country retail trade is active. Reports regarding Ontario crops are generally good. It had been feared that oats would have been affected by the lack of rain, but several good showers recently have helped matters considerably. Cattle are about steady, with hogs easier. Hides are dull and unchanged, and wool is easy in tone but quiet.

MONTREAL.—Business is good. Wholesale and retail stocks are moving well, and all branches of industry continue actively engaged. Dry-goods men report that an excellent summer business is still being done. In men's-wear goods there is a particularly heavy trade moving. The reorder trade, generally on summer merchandise, is much heavier than had been expected. Linens are proving one of the most popular lines of wear. Values in this line, as in many others, are firm. There is a growing tendency on the part of the purchasing public to buy mostly the better class of goods, steady advances in prices have lessened differences between the cheap and the better lines, and the latter are more in demand. Groceries continue active. Good shipments are being made to all parts of Canada. Hardware trade is active in all lines. Country trade is showing a good tone and collections are generally fair. Dairy product exports are light. Hides are easy.

VANCOUVER-VICTORIA.—Trade all along the coast shows rather a better tone. All lines of wholesale goods are moving briskly, and collections are satisfactory. Provincial industries are active, and a brisk trade is moving at interior points. Values are generally steady. There is everywhere the same complaint of the shortage of labor, which is more particularly affecting the general farming and the fruit raising industries. Lumber mills, which have been shut down since the end of June to prevent a surplus of supply, will reopen about August 1.

WINNIPEG.—A fairly good trade is moving in all lines. Sorting orders in summer goods continue to come forward freely, but the greatest interest attaches to preparations for fall. Orders all along have been heavy and the indications have promised a very successful season. Fine weather has continued to improve crop conditions, and it is reasonable to suppose that total yields will be about equal to last year. Money continues very tight and in great demand. It is becoming the opinion that the scarcity is bound, unless relieved within the near future, to have some effect upon the industrial growth of the country. Collections are still slow.

FINANCIAL.

Money Market.

Weak tendencies have prevailed in connection with rates for call money at New York, the quotation for renewals having generally ruled at from 2½ to 2¾ per cent. Exchange at interior cities is, however, adverse to New York, and the Treasury disbursements fell off for the week, though the estimates are that the metropolitan banks have gained about $6,500,000 from the aggregate movement of funds. Time money was, however, firm for short periods, and it is noted that six-month loans are held firmly at 6 per cent. While the foreign financial markets are described as showing a better tone, foreign exchange at New York has been firm at 4.87 for demand sterling, and there was little disposition on the part of bankers to put out loan bills. Commercial paper is dull at 6½@6 per cent., the supply of choice names being restricted by such quotations.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending July 25 shows an aggregate of $2,511,740,000, as against $2,875,537,000 last week and $2,526,072,000 in the corresponding week last year. Canadian clearings for the week aggregate $82,168,000, as against $88,286,000 last week and $71,580,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	July 25	Inc.	Dec.	July 18
New York	$1,480,729,000	....	4.5	$1,726,339,000
Chicago	228,713,000	10.8	....	243,483,000

† Not included in totals because containing other items than clearings. § Not included in totals because comparisons are incomplete. * Last week's.

New York Banks.

Last week's bank statement was about as expected, except that the increase in the cash item of the averages aggregated only $2,768,900, which was considerably below the estimated results of the movements of money for the week. This was attributed to the effects of the average system, and presumably represents an equalization of the unduly large gain in that respect shown in the preceding statement. The increase in loans of $414,100 was looked on as a nominal one, and would go to show that fresh borrowings were generally effected from trust companies and foreign bankers. The increase in the deposits of $2,231,500 was about $1,000,000 less than that in loans and cash taken together, making the figures somewhat discordant in that regard. The reserve requirements were consequently $557,875 larger, making the increase in surplus reserve $2,211,025. The figures of the statement compare as follows with those of the preceding week:

	July 20	July 13	Changes
Loans	$1,105,250,000	$1,104,835,900	I. $414,100
Specie	204,768,300	201,818,000	I. 2,950,300
Legal tenders	72,567,600	72,479,000	D. 181,400
Deposits	*1,072,991,300	1,070,759,800	I. 2,231,500
Circulation	50,382,300	50,321,700	I. 60,600
Total reserve	277,335,900	274,567,000	I. 2,768,900
Reserve required	268,247,825	267,689,950	I. 557,875
Surplus reserve	9,088,075	6,877,050	I. 2,211,025

The following shows the relation between the respective dates:

	July 20, 1907	July 21, 1906	July 22, 1905
Loans	$1,105,250,000	$1,045,668,700	$1,126,366,700
Specie	204,768,300	193,065,300	220,192,500
Legal tenders	72,567,600	87,509,500	89,109,600

Foreign Exchange.

Considerable strength has been exhibited in the exchange market during the present week. There was but a scanty supply of commercial bills, and while the inquiry for remittances was by no means urgent, it was sufficiently large to force the quotation for bankers' sight sterling up to 4.87, with transactions in the latter part of the week at as high as 4.87.20. Long sterling and continental bills were also correspondingly firm. At the same time there seemed to be less apprehension about a renewal of gold exports than might have been looked for, in view of the fact that the demand sterling rate was only about one-eighth below the level at which previous arrangements of that kind had been effected. While it was realized that a renewal of the offer of the Bank of France to allow interest on gold shipments while in transit would be likely to bring about renewed engagements of the yellow metal, it was also pointed out that Paris seems disinclined to offer any further inducements for the purpose of increasing its gold reserve, and that there were no bids in the London market for the specie which arrived there this week from South Africa. It is also held that in view of the cotton crop situation of this country, foreign

bankers may become more willing to put out finance bills in New York, and that considerable offerings may come in sight from this source before long. The exchange market showed additional strength on Friday, rising to 4.87.20 for demand bills on London.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.70 @ 4.87.75; commercial bills, 4.83¾@4.84; francs, 5.19⅜ less 3-32@5.16½ less 1-32; reichsmarks, 94 7-16@94¼ less 1-32.

The Bank of England's discount rate is unchanged at 4 per cent. Its weekly return showed a gain of £497,000 in gold, and its proportion of reserve to liability was 47.16 per cent., as compared with 46 per cent. the preceding week. There was also a decrease of £845,000 in the loan account. In the London open market call money is 2@2¼ per cent. and discount 3 9-16@3⅝ per cent. The Bank of France reported for the week an increase of 8,400,000 francs in the gold held and a reduction of 52,200,000 francs in loans. Its discount rate remains at 3½ per cent., the Paris market quotation being 3 5-16 per cent. At Berlin the bank rate is 5½ per cent. and the market 4¼ @4⅛ per cent.

New York Securities Market.

Not only did the activity of the stock market display a moderate enlargement this week, but the trading, while still to a large extent professional and manipulative, also represented a certain measure of increased public participation, although, as heretofore, attention was mainly centered in a few stocks, the great feature being the Harriman group headed by Southern Pacific. The publication of the very favorable preliminary statements of both the Union and the Southern Pacific systems for the fiscal year ending June 30, 1907, which is referred to elsewhere, resulted in the prompt appearance at the close of last week of dividend-increase rumors. It was argued that Southern Pacific, in particular, inasmuch as its statement showed fully 12 per cent. earned on the common stock for the year, was in such a position financially that an increase in the dividend rate from 5 per cent. to 6 and possibly to 7 per cent., was both justifiable and probable. Heavy buying orders appeared in both Southern and Union Pacific, and the former stock had a sharp advance from 82⅜ on Saturday last to 91⅜ on Thursday. After the meeting of the company's executive committee on Thursday, it was announced that action would be taken on the dividend a week from that day, and Mr. Harriman's expressions on the subject left little doubt that the intention was to place the stock on a 6 per cent. basis. The price reacted somewhat from the high figure, but the stock continued to be steady, as was also Union Pacific, although intimations that the latter might be raised from a 10 to a 12 per cent. basis found little credence. While, as already stated, the activity of the market entered in the two issues just mentioned, there were other developments which had an influence upon various leading stocks. The United States Steel shares naturally show heaviness on the news of a strike of the miners in its iron-ore properties, but became steady after a moderate decline, and at the end of the week tended to rally sharply on the news that the strike was dying out and on expectations of a very favorable quarterly earnings statement to be issued next week. Reading was the object of the bullish manipulation which is customarily seen in it under such conditions, and Amalgamated Copper received support, apparently due to assurances from inside sources that no further reductions in copper prices were probable. There continued to be further talk about a deal whereby the Northern Pacific's equity in the Burlington will be sold to the Great Northern, thus providing for what is termed a melon for the first-named company's stockholders, although it is recognized that if such a plan is contemplated its execution will be long delayed. Brooklyn Rapid Transit was active and showed strength, while, on the other hand, the Interborough-Metropolitan stocks were decidedly weak as the result of fears regarding the contemplated investigation by the Public Utilities Commission. Some of the neglected specialties were also strong, among them General Electric, while New York Air Brake had another of its spectacular rises, advancing over 20 points, to 124⅞, on statements that certain interests were endeavoring to secure options at 150 on a majority of the stock. Rates for call money, as noted elsewhere, were easier, although time money remained firm and foreign exchange neared the gold export point. The first mentioned fact, however, seemed to give some encouragement to bullish speculators.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

	Price		Sales

July 13	—18,000	—277,000	—1,021,000
July 20	—1,554,000	+3,063,000	—293,000

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
Largest exports in 1907, week ending June 6			5,263,138
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with July 20 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
July 20, 1907	322,735	3,586,661	2,952,656	2,087,118
July 13, 1907	297,460	3,075,700	3,222,516	1,885,461
July 21, 1906	379,997	7,130,873	2,785,930	3,067,310
July 22, 1905	320,621	5,280,231	2,930,900	2,606,357
Season				
July 1, 1907, to July 20, 1907	923,744	10,054,299	9,817,321	6,211,113
July 1, 1906, to July 21, 1906	1,038,290	13,759,120	9,798,773	9,616,759
July 1, 1905, to July 22, 1905	899,009	10,339,446	10,964,225	7,872,109

Cereal Exports by Ports from the United States and Canada.

Wool Markets.

The tone of the market is very much stronger, and while its surface appearance is one of quiet, sales of late have been much larger than dealers are willing to admit. There is a strong upward tendency in all wools grading staple, and delaine and half blood fleeces are already selling at higher prices. New wools are arriving very slowly, but large sales are being made to arrive, and more wool has been sold this season in the original bags than was the case last year. Sales of the week included 500,000 pounds of fine washed delaine at 39½ cents, with 40 cents asked in some cases; unwashed delaine at 32½ cents, half blood fleeces at 34 cents, with some holders asking 35 cents; Idaho wool, in the original bags, at 24 cents, half-blood Idaho at 25½@26 cents, fine and fine medium Idaho and Utah at 20@24 cents, fine clothing Idaho at 23@23½ cents; fine medium Utah at 24 cents; Montana wool, in the original bags, at 25@27 cents; eight months' Texas at 23@24 cents, twelve months' Texas at 27 cents, fine scoured wool at 68@70 cents, fine medium scoured at 65@66 cents, and sample lots of California at 67@68 cents for northern and 65@66 cents for middle counties. The London sales closed two days ahead of the schedule on account of the very heavy withdrawals, and, contrary to predictions, low crossbreds and scoured wools were 5@7½ per cent. lower than the previous sales. Fine merinos were unchanged, however, and there was no weakness in any wools suitable for this country. In the Boston market Australian crossbreds, 46s, sold during the week at 42 cents. Fine merinos are quiet on account of the small stocks. South American wools are quiet but firm.

WHY STEEL RAILS BREAK.

The *Iron Trade Review* says: "Notwithstanding the claim of inspecting engineers of some of the leading trunk lines that the rapid increase in the number of rail breakages is due to inferior steel and insufficient rolling of the sections, no data were offered which would bear out this contention, in a discussion of this subject at the annual meeting of the American society for testing materials, held last week. On the contrary, statements made by the railroad representatives indicate that the weight of rolling stock is excessive for even the heaviest section as at present designed, nor has the increase in the weight of the section been proportionate to that of the locomotives and cars in recent years. The statement was made that 85 per cent. has been added to the weight of engines and on the drivers since 1885, yet during that period the increase in weight of the rail sections would barely average 30 per cent.

"Considerable evidence was also offered which would indicate that many failures result from the operation of locomotives that are not properly counterbalanced, and flat spots on drivers likewise produce many fractures. Investigation of some fifty breakages on a western road, conducted by an uninterested party, showed that all of the broken rails were taken from one side of the track, and it was found that the locomotives on this division, which had a slight grade, had a tendency to swerve toward this side. Steel tie plates, it was believed, also were a contributing factor, as many of the failures occurred immediately over them. Analysis to ascertain the chemical properties of eight of these rails showed them to be normal, and the elements were all well within the specified limits."

PRODUCTION OF COPPER, SPELTER AND LEAD.

The United States Geological Survey has issued preliminary statements showing the production of copper, spelter and lead in the United States in 1906.

The statistics of copper have been collected by L. C. Graton, who reports that the production of copper in the United States in 1906 was 906,591,947 pounds. This is an increase of about 18,000,000 pounds, or 2 per cent., over the production of 1905, compiled on the same basis, and is a new record. In the following table the production is apportioned to the states in which the copper was mined in 1906:

LAKE COPPER AND FINE COPPER CONTENT OF BLISTER.

	Pounds fine		*Pounds fine*
Alaska	8,685,646	New Mexico	7,099,842
Arizona	262,566,103	North Carolina	582,209
California	28,153,202	Oregon	545,859
Colorado	7,427,253	Tennessee	17,809,142
Georgia	17,182	Texas	51,377
Idaho	8,578,046	Utah	50,320,119
Massachusetts	9,744	Vermont	11,694
Michigan	229,695,730	Washington	290,823
Missouri	54,347	Wyoming	106,177
Montana	283,485,517		
Nevada	1,099,635	Total	906,591,947

Of this amount, 816,386 pounds in blister were produced in foreign smelters from materials exported from the United States. In addition to the total given, 54,543,116 pounds were produced as blister in domestic smelters from foreign ore, concentrates and matte, while blister imported from foreign sources containing 136,826,906 pounds fine copper was electrolytically refined in this country.

The production of electrolytic copper in the United States in 1906, based on actual returns from all refineries, was as follows, in pounds:

Electrolytic copper from materials of domestic origin	648,614,592
Electrolytic copper from materials of foreign origin	191,370,022
Total	839,984,614

The figure for domestic production includes 24,017,833 pounds lake copper, which was refined electrolytically, and an indeterminate but very small quantity recovered from scrap. The production of domestic non-electrolytic copper refined by the furnace process and known as casting copper amounted in 1906 to 28,345,263 pounds. This does not include lake copper. The total production of refined copper of domestic origin in 1906 is shown in the table below, in pounds:

Lake (exclusive lake electrolytic)	205,608,382
Electrolytic, total domestic	648,614,592
Casting	28,345,263
Total refined	882,568,237

Complete returns show that the following stocks were on hand at the lake and electrolytic refineries:

	Pounds
January 1, 1906	118,244,028
January 1, 1907	92,470,792
Stocks depleted during 1906	25,773,236

These figures do not include undelivered sales. Stocks carried by consumers have not been estimated. In addition to these stocks at refineries, there was at smelters or in transit to refineries blister copper to the amount of 110,000,144 pounds on January 1, 1906, and 100,630,245 pounds on January 1, 1907.

The apparent consumption of refined copper in the United States in 1906 was about 680,000,000 pounds, as compared with about 600,000,000 pounds in 1905. One method of deriving this figure is shown below:

Total domestic refined copper produced in 1906	882,568,237
Imports for consumption, foreign origin	215,402,841
Stock at refineries January 1, 1906	118,244,028
Total available supply	1,216,215,106
Exports	446,750,711
Stock at refineries January 1, 1907	92,470,792
Total withdrawn from supply	539,221,503
Apparent consumption	676,993,603

This is in addition to the quantity, perhaps as much as 50,000,000 pounds, which was recovered from old copper, drosses, residues, etc., and reëntered the market, mostly in the form of casting copper.

J. M. Boutwell, of the United States Geological Survey, reports that the production of spelter was as follows in 1906, the increase over 1905 amounting to 20,921 tons of 2,000 pounds, or 10.3 per cent.:

	Tons
Colorado	6,260
Eastern and southern states	20,930
Illinois	47,939
Kansas	129,564
Missouri	11,077
Total	224,770

Mr. Boutwell figures the consumption as follows:

Supply:	*Net tons*
Stock beginning of year	3,463
Production	224,770
Imports for consumption	2,043
Total available	230,276
Withdrawn:	
Stock at close of year	3,824
Exports, foreign, in bond	1
Exports, domestic	4,670
Total withdrawn	8,495
Apparent domestic consumption	221,781

The report of J. M. Boutwell on lead contains the following statement of the production of refined lead, which embraces all desilverized lead produced at works in this country and the pig lead recovered from the Mississippi valley lead ores. It is exclusive of a product of 10,546 tons antimonial lead reported by refineries. About 25,000 tons of pig lead derived from Mississippi valley ores was desilverized, and is therefore included under desilverized lead and not under soft lead. These totals have been compiled from actual returns made to the bureau by all known refineries operating in the United States:

Production of desilverized lead	313,886
Production of soft lead	90,783
Total production of refined lead	404,669

The totals in this table of consumption include end products only. Thus, stocks, both domestic and foreign, and production are in terms of refined lead, imports and exports are in finished state, and antimonial lead is in marketable form, while lead in ores and bullion is excluded. The figures for refined and antimonial lead and for domestic stocks are based upon direct returns from all known operating refineries, and from all known smelters treating lead ores from the Mississippi valley. All other figures are from statistics compiled by the Bureau of Commerce and Labor:

Supply:		
Stock, domestic, beginning of year		3,975
Stock, foreign, beginning of year		56
Total production, refined lead		404,669
Total production, antimonial lead		10,546
Imports, foreign refined		11,763
Total available		431,009
Withdrawn:		
Stock, domestic, close of year		4,571
Stock, foreign, in bond, close of year		64
Refined in bond from foreign base bullion and ores and exported		48,558
Lead in manufactures exported under drawback		1,516
Total withdrawn		54,709
Apparent consumption of lead in the United States in 1906		376,300
	Quantity	*P. ct.*
Increase in consumption in 1906	29,285	8.44

Mr. Boutwell also presents a table showing the source of the lead produced. Idaho furnished 117,117 tons; Missouri, 111,075 tons; Utah, 56,260 tons, and Colorado, 50,497 tons, the total from domestic ores having been 347,695 tons. Chiefly from Canadian and from Mexican ores, 56,207 tons were derived, this being exclusive of 12,339 tons of Mexican bullion.

San Francisco Bond and Mortgage Co.

Capital, - - $10,000,000

10,000 shares of the Capital stock of this Company are offered for subscription at $100 per share. Subscription books close August 20, 1907.

This Company has been organized to loan money on income property in San Francisco on what is known as the bond and mortgage plan. This involves the issuance of bonds secured by first mortgages on income property, and the sale of guaranteed mortgages.

Owing to the exceptional conditions the net earnings of its capital stock should considerably exceed 12 per cent. per annum offering a good and safe investment.

1. **As to Bond and Mortgage Companies:** The first was founded by Frederick the Great of Prussia in 1770. The system proved so sound that these companies spread over Europe, and within the past few years have been introduced into America. The cities of Paris, Berlin and Vienna have been built largely through these companies. Their success has been phenomenal. The European companies have outstanding bonds aggregating billions of dollars. Their securities are of a very high order. The Credit Foncier of Paris is an instance. At the time of the Franco-Prussian War the bonds of this company sold higher than French Government bonds. Similar companies operating in New York, Chicago and elsewhere in the United States have met with great success. One such company has now outstanding loans upon New York real estate exceeding $95,000,000. The capital stock of these companies in America is earning from 12 to 15 per cent. per annum. **This Company should earn more, on account of its exceptional opportunity.**

2. **As to the San Francisco Bond and Mortgage Company:** San Francisco is the financial centre of California. As California grows in importance, San Francisco will grow correspondingly. The vast business of San Francisco has been unhoused. **Since the fire, $100,000,000 has been expended in reconstruction, but $300,000,000 more will be required for the construction of the new city,** and **$200,000,000** of this within the next five years. Higher rates of interest will be paid than before the fire, and the security offered cannot be excelled. The total of the City's present assessment roll, based on a 60 per cent. valuation, is **$429,000,000—a gain of $53,000,000 in the past 12 months.**

The population of California is 2,000,000. Its area is larger than that of Italy, which sustains a population of 32,475,000. San Francisco is the natural gateway to the growing trade of the Orient.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 3, 1907.

An acute phase was reached in the railway litigation in North Carolina on Saturday, when President Finley of the Southern Railway Company was arrested at Asheville upon a warrant from a state court and was almost immediately released by Judge Pritchard on a writ of habeas corpus. Before the day was over the railroads agreed to conditions proposed by Governor Glenn, the first of which was that the railroads should put the 2¼-cent rate into effect on August 8. As the result of the other arrangements agreed upon the state will appeal from Judge Pritchard's orders releasing the railroad men on writs of habeas corpus, while the Southern Railway Company will appeal to the State Supreme Court from the decision in the Wake county case, in which a fine of $30,000 was imposed on the company. All indictments and prosecutions now pending are to be dismissed, and no others are to instituted for any alleged violations of law up to the time the new rate is put into effect by the railroads. In the meantime the governor will discourage the bringing of penalty suits pending the final determination of the questions at issue, which is to be hastened by the cöoperation of both sides. While matters have reached this stage in North Carolina, there are possibilities of friction in Virginia, where the state authorities have been in conference on the rate situation, and in Alabama, where the [illegible] has revoked the license of the Southern Railway to do business in the state because that company recently had a suit against it removed to a federal court in alleged violation of a state law.

An important point was scored by the delegates from the United States at The Hague in the indorsement by the committee having the matter under consideration of their proposal providing for the concluding of an agreement in which there shall be introduced "some limitations in the use of force for the collection of contractual, public and ordinary debts." Thirty-seven votes were recorded in favor of the proposal, some with reservations, and there were some absentees, but no negative votes. The British proposal for the abolition of contraband of war secured a majority of votes in the committee dealing with the rules of naval warfare on Wednesday, twenty-four states supporting the proposition, with certain reservations. The result is regarded, however, as being in effect a defeat for the proposal, because the vote in its favor came from the smaller countries. Germany, France, the United States and Russia voted against it, while Japan and Spain were among those not voting on it. One of the most encouraging of recent incidents at The Hague was the reception accorded on Thursday to Mr. Choate's presentation to the first committee of the proposal for the establishment of a permanent arbitration tribunal.

Gold shipments from New York were resumed this week to the extent of $500,000, the amount in question having been dispatched on last Tuesday to Paris. It was understood that the Bank of France facilitated the engagement by advancing the sum involved, pending the receipt of the gold. In fact, most accounts have it that the institution has never withdrawn its offer to that effect, though it does not, apparently, seem disposed to make such vigorous efforts as it put forth recently to attract gold to the French capital. Coupled, as the incident was, with strong conditions in the foreign exchange market, demand sterling having sold up early in the week to 4.87.25, there was a general feeling in the money market that a further and considerable outflow of gold to Europe might result. It is, of course, rather exceptional for gold shipments to occur at this period, and, furthermore, such a drain under existing conditions would be very inconvenient for the New York money market, which is beginning to experience the effects of interior demands for crop-moving purposes. Besides this, Canadian banks, as is customary at this season, are withdrawing their funds from New York for similar purposes.

An important element in the present money situation here is the comparative absence of loans of foreign money in the American market. Foreign loans are scarce in spite of the prevalent 6 per cent. rate for six months' borrowings on collateral, and it is understood that the leading London banks have adopted an exceedingly conservative attitude toward American finance bills and display an indisposition to discount such paper freely. The appearance in the New York foreign exchange market toward the end of the week of renewed offerings of bills, evidently drawn in connection with some foreign loans, was regarded, therefore, as a hopeful sign.

It furnishes somewhat of a commentary on current money conditions, and those in particular which have a bearing on the bond market, to find that private overtures were promptly made for the purchase of certain issues which were not fully subscribed for on recent public offerings. The most interesting of the developments on that score relate to the balance of the Atchison, Topeka & Santa Fe Railroad Company's $26,000,000 of 5 per cent. convertible bonds, and to the $27,000,000 of New York City 4 per cents. In the case of the Atchison convertible bonds, it will be recalled that the stockholders took only about $9,000,000 of the issue, leaving some $17,000,000 thereof to be disposed of. It is understood that not only have stockholders but outsiders as well applied for allotments at par, and that banking concerns of the highest standing also submitted propositions to the officers and directors of the company in connection with the disposal of the remaining portion of the issue, the upshot being that a large house took the entire amount, though it is, of course, to be supposed that material concessions as to the price of the securities were allowed to the bankers. In the case of the New York City bond issue, the municipal finance department has decided to make another offering. To this end it is announced that proposals for the purchase of $15,000,000 4 per cent. city stock will be received until August 12, and it is further reported that, though the intervention of a bankers' syndicate has not been sought or obtained, responsible financial interests have expressed a willingness to take at par any of the bonds which are not subscribed for.

The government report of cotton condition on July 25, published yesterday, was something of a bullish feature in showing a gain of only 3 points in the crop's condition on July 25 as compared with June 25. The figures of condition were 75 on July 25, 1907, as against 72 on June 25, 1907, 82.9 on July 25, 1906, 74.9 on July 25, 1905, and 82.6 the average at the date reported for the past ten years. The condition figures by states on July 25 were: Virginia 65, North Carolina 75, South Carolina 81, Georgia 81, Florida 84, Alabama 72, Mississippi 71, Louisiana 71, Texas 75, Arkansas 68, Tennessee 75, Missouri 66, Oklahoma 74, Indian Territory 74. The condition figures this year are about 8 points below a year ago, in a season when 13,290,000 commercial bales were produced. Especially close resemblance is borne to the condition in the preceding year at this time, the figures are almost identical in fact, and the growth of the 1907 crop, according to the Census Bureau, was 10,700,000 bales. The area planted to cotton this year was, however, 4,500,000 acres larger than in 1905, which on indentical condition figures points to a crop not far from 12,000,000 bales. The immediate effect of the publication of the figures was an advance of 19 to 30 points, later scaled down, however, so that a gain of only 3 to 10 points was shown over the preceding day, but the advance for the week on spot cotton is 15 points, while the gain in futures is 20 to 30 points.

July being a month of heavy disbursements from the Federal Treasury, a considerable deficit is naturally looked for by the Washington officials. The excess of expenditures over receipts for the month just closed, however, appears to have been less than they expected, owing to the fact that the receipts for the month showed a decided increase over those for the first month of the last fiscal year. The receipts for July amounted to $55,906,465, an increase of over $3,600,000 over those for July, 1906, while the expenditures, amounting to $66,813,345, showed a gain of not quite $1,000,000 over the corresponding figures a year ago. The excess of expenditures amounted, as will be seen, to only a little over $10,900,000, or about $2,600,000 less than that for July, 1906. There was a reduction of nearly $24,000,000 in the public debt during the month, owing to the redemption of 4 per cent. bonds maturing on July 1.

In several respects the results of the elections held in the Philippines on Tuesday are disappointing to the authorities at Washington. In the first place, a very general apathy regarding the election was disclosed, particularly among those elements in the community from whose participation most was expected. Only a small proportion of the population qualified to vote took advantage of the opportunity to cast their ballots for representatives, a proportion put in some advices at less than 10 per cent. Such activity as was displayed was almost entirely among the less desirable classes of the population. So far as can be gathered from the information at hand, a decided proponderance has been secured by the party known as Nationalistas, one of whose demands is for immediate independence. This is particularly true as regards the city of Manila, where the Nationalista candidates secured over four-fifths of the total number of votes cast.

JULY FAILURES AND LIABILITIES.

There were 731 failures reported to BRADSTREET'S for the month of July, an increase of 8.3 per cent. as compared with June this year and of 3.8 per cent. as compared with July, 1906. The number of July failures this year is, however, the smallest, with three exceptions, reported in July for fourteen years past. This showing is certainly not an unfavorable one, considering the volume of business doing and the large increase yearly in the number of persons in business. Liabilities do not, however, make quite so favorable a showing, they aggregating $12,499,491, a decrease of 29 per cent. from those of June, but an increase of 73 per cent. over July a year ago, and being the largest July liabilities reported since 1901. In only three of the past fourteen years, in fact—in 1901, in 1896 and in 1893—were the July liabilities larger than this year. This appears to have been due largely to the occurrence of a comparatively few large suspensions of manufacturers swelling the grand total of liabilities. Manufacturers of cereals and of brick have contributed perceptibly to this total.

The failures, assets and liabilities monthly and quarterly since January 1 follow:

	Number	*Assets*	*Liabilities*
January	1,112	$8,637,164	$17,119,459
February	775	5,560,793	10,092,877
March	741	6,010,043	11,192,550
First quarter	2,628	20,208,000	38,404,886
April	733	5,626,691	9,888,052
May	755	5,290,090	10,546,963
June	675	10,899,787	17,783,774
Second quarter	2,163	21,816,478	38,218,789
Six months	4,791	42,024,478	76,623,675
July	731	7,287,430	12,499,491

It will be seen that July failures were fewer in number than in any month but June this year, but liabilities were larger than for any months but January and June. The July comparison for a period of years is found in the following table:

	Number	*Assets*	*Liabilities*
1907	731	$7,287,430	$12,499,491
1906	704	3,793,099	7,185,317
1905	705	5,809,448	10,481,204
1904	774	3,586,680	7,219,212
1903	718	4,342,412	9,785,882
1902	772	3,084,500	6,754,475
1901	841	8,498,200	15,120,204
1900	819	4,170,491	9,458,257
1899	744	1,912,746	5,753,048
1898	665	5,085,456	9,796,419
1897	1,037	5,201,117	9,265,690
1896	1,203	9,806,749	17,321,664
1895	1,135	7,245,531	12,373,257
1894	993	4,674,844	9,123,805
1893	1,892	77,663,842	89,559,384

July	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1906
New England	96	$319,668	$833,023	96	$623,503	$1,230,537
Middle	225	3,719,352	5,839,233	206	1,442,972	2,922,311
Western	155	1,154,391	1,997,347	139	599,629	1,186,348
Northwestern	44	485,150	1,172,888	47	146,012	265,357
Southern	141	1,365,854	2,216,942	136	794,542	1,247,787
Far-western	63	154,368	287,458	71	107,912	220,069
Territories	7	88,647	152,600	9	78,529	112,908
Total, United States	731	$7,287,430	$12,499,491	704	$3,793,099	$7,185,317
New York City	95	679,050	1,531,943	91	268,303	1,005,450
Manhattan and Bronx	80	638,928	1,302,871	86	249,494	953,447
Canada	101	352,400	917,349	83	200,495	593,632

Features brought out in the detailed table given herewith are the increases over a year ago shown in the number in the middle states, the western and the southern groups, while fewer failures are noted in the northwest, the far west and the territories. As regards liabilities, it is to be noted that New England alone of all the groups shows smaller failure loss. Middle states liabilities are double those of July a year ago, those in the south are almost double, and those in the northwest are over four times as large. New York City failures show only a moderate increase over July, 1906, but the liabilities are 50 per cent. larger.

Canadian failures for July number 101 and liabilities aggregate $917,349, increases of respectively 22 and 54 per cent. over July, 1906.

A REVISED ESTIMATE OF GOLD STOCKS.

A highly interesting statement regarding the stock of gold in the United States has been issued this week from the Mint Bureau, whose retiring chief, Director George E. Roberts, has been for some time carrying on an inquiry for the purpose of verifying or revising Treasury estimates bearing on the matter. The director was led to make the inquiry by recurring criticisms of those estimates by persons believed by him to be competent to form an opinion on the subject, who thought the estimates were too high The criticisms, it may be said, were not directed to the amounts reported to be in the Treasury and in national banks, but to the large residue assumed to be in other banks and in circulation. The Treasury estimate, it is recalled, dates from June 30, 1873, when the then Director of the Mint, Dr. Henry R. Linderman, estimated the total stock of gold in the country at $135,000,000. At that time the country was on a paper basis and the stock of gold was comparatively small, so that the conditions were regarded as favorable to a close estimate. In framing his estimate Dr. Linderman said that he had taken the amounts in the Treasury and in national banks and added an allowance of $20,000,000 for the amount in circulation on the Pacific coast and $10,000,000 for the holdings of the public in different parts of the country. Since that time the estimates have been built up by regularly adding the coinage of the mints and the imports of United States coin and deducting the exports of United States coin and an allowance for the amount consumed industrially.

It now appears that Dr. Linderman's original estimate of the stock of money in the country on June 30, 1873, was too high. He apparently included certain "coin items," such as bonds, in his figures for gold in the Treasury. The stock of gold actually in the Treasury on that date after various "coin items" had been eliminated was only $71,188,548. This discovery was made by Mr. Maurice L. Muhleman, who was formerly an official in the Treasury Department and is well known as a student of monetary statistics. The stock of "specie" in national banks was put at $4,818,086, but it is now regarded as probable that $1,000,000 of this was silver, for the holdings of silver coin by the banks three years later, the nearest date for which figures are obtainable, were $1,472,507. The deduction of $1,000,000 as silver coin would leave the gold holdings at $3,818,086. Adding to the amount in the Treasury and that in the national banks the sum estimated as in other banks and in the hands of the public, viz, $30,009,000, we get a total of $105,006,634 instead of the $135,000,000 estimated.

In carrying along the estimates from year to year three other possible sources of error have been taken into account, all affecting the amount assigned to other banks and the public, namely: first, errors in custom-house returns of coin imports and exports; second, errors in estimating the industrial consumption, and, third, the unrecorded movement of coin in and out of the country in the immediate possession of travelers. Touching the first source of error, it is pointed out that there being no duty upon gold bullion or coin, customs officials are not so particular to verify the accuracy of declarations as they would otherwise be. If, for example, a shipment of gold bullion or foreign gold coin should be accidentally entered at a custom house as United States coin it would be taken up in the statistics as an addition to the stock, but the same shipment would probably go directly to some office of the mint service and after coinage be added to the stock again, thus effecting a duplication. As the result of a comparison of entries at the New York Custom House with entries at the Assay Office in that city, duplications were discovered to an aggregate of $23,404,710, and it is thought that there is warrant for raising this estimate to $30,000,000. Owing to the fact that the custom house figures for the movement of gold coin between the United States and Canada show a balance against the former of only $15,115,689 for the period under review, while the stock of United States gold coin in the Dominion Treasury and in the chartered banks increased in the same period from about $5,000,000 to $43,914,154, Mr. Roberts is led to estimate the loss to Canada in excess of the custom house records at $25,000,000.

As regards the industrial consumption of gold, a revised estimate based upon more definite information obtained in recent years is held to justify an increase of previous estimates by the sum of $25,000,000. Touching the movement of gold in and out of the country in the possession of travelers, the assumption has been that coin carried out of the country in this way was usually brought back in the same manner. It is now, however, considered probable that some of it is melted down abroad and finally lost to our circulation. Estimates based in part upon replies from consular officers abroad put the losses from this source since 1873 at $20,000,000. Summing up the various amounts which, in the view of Mr. Roberts, should be deducted from former estimates, he gets a total of $135,000,000. This is applied by the Director in his statement to the reduction of the estimate of money "in other banks and in circulation" for June 30, 1906. That estimate showed an amount of $480,944,793. Of this it is suggested that $100,000,000 represented a fair estimate of the gold coin in banks other than national, while the gold coin held in the custody of treasurers under the laws of California on the first Monday in July, 1906, was $20,151,409. These items the Director places to the account of gold "in sight," leaving $360,793,384 to be considered as "in other banks and in circulation." From this amount the estimated excess of $135,000,000 is deducted, leaving the figure for that item at $225,793,384. Bringing the calculation down to June 1 of this year on the same basis, a total stock of gold coin and bullion (in the mints) of $1,484,845,280 is arrived at, of which $1,109,458,330 is held by the Treasury and national banks. These conclusions of the Director of the Mint will doubtless call for some revisions of our monetary statistics. It is comforting to learn, by the way, that in no other country of the world can so large a percentage of the estimated stock of standard money be definitely located.

MUNICIPAL OWNERSHIP OF PUBLIC UTILITIES.

While differences of opinion upon particular phases of municipal ownership have been disclosed in special reports by members of the National Civic Federation's investigating committee, a close approximation to unanimity has apparently been reached in the final report of the committee, in which the general conclusions of that body are set forth. These conclusions, it may be said, have not been arrived at by starting from the viewpoint of any particular class in the community. The committee is made up of representatives of business interests, labor leaders, college professors and journalists, the chairman being Mr. Melville E. Ingalls, who is well known as a railroad director, and the vice-chairman Dr. Albert Shaw, editor of the *Review of Reviews*. The report is signed by nineteen out of twenty members of the committee. A statement of minor exceptions is presented by two members, and a separate paper presenting his special views on certain matters is submitted by another, who does not sign the report.

It is pointed out in the report that it is difficult to give positive answers of universal application to the questions arising as to the success or failure of municipal as compared with private ownership. The local conditions affecting particular plants are, it says, in many cases so peculiar as to make a satisfactory comparison impossible, and it is very difficult to estimate the allowance that should be made for these local conditions. For instance, in making deductions from the financial conditions of Wheeling as affected by its gas plant as compared with those of Atlanta and Norfolk with their private plants, allowance must be made for the presence of natural gas in Wheeling. Again, in comparing the public waterworks of Syracuse with the private waterworks of Indianapolis from the point of view of the success or failure of municipal operation, geographical conditions must be taken into consideration. The situation at Syracuse is extremely favorable to the establishment of an efficient plant with comparatively little effort on the part of its management. At Indianapolis the conditions are unfavorable. In Syracuse the water flows to the city by gravity; in Indianapolis it must be pumped. In short, both in the United States and abroad the results have been affected favorably or unfavorably by special conditions applicable to each city.

The difficulty of reaching satisfactory results by the comparative method is not, however, confined to special conditions. The committee [illegible]

attempt to compare municipal with private electric-light plants in the United States would be fruitless if allowance were not made for the fact that in most cases such municipal plants are confined to street lighting and may not do commercial business. Allowance must be made also for the fact that many municipal plants have had a struggle to exist in the face of unsympathetic public opinion. In England, consideration must be given to the fact that the municipal electric-light and street-railway plants have permanent rights, while the rights of the private companies operating these particular utilities are limited as to the length of their existence, many street-railway franchises expiring twenty-one years after they were granted. Finally, it is insisted, regard must be had to the differences in the social and political conditions and in the nature of the people of the two countries—differences which must be taken into account in considering the question whether a measure of success attained in the municipal management of utilities in England would be followed by a like measure of success in the same directions in the United States.

In its report the committee says that it desires to emphasize the fact that the public utilities studied are so constituted that it is impossible for them to be regulated by competition, and that therefore they must be controlled or regulated by the government; or they must be left to do as they please; or they must be operated by the public. None of the men signing the report is in favor of leaving them to their own will, so that the question is presented whether it is better to regulate or to operate. The opinion is expressed that a public utility which concerns the health of the citizens should not be left to individuals where the temptation of profit might produce disastrous results, and that undertakings in which the sanitary motive largely enters should be operated by the public. The conclusion is further reached that municipal ownership of public utilities should not be extended to revenue-producing industries which do not involve the public health, the public safety, public transportation or the public occupation of public streets or grounds, and that municipal operation should not be undertaken solely for profit. The committee also entertains the conviction that all future grants to private companies for the construction and operation of public utilities should be terminable after a certain fixed period, and that meanwhile cities should have the right to purchase the property for operation, lease or sale, paying its fair value.

To carry out these recommendations effectively and to protect the rights of the people, it is suggested that the various states should give to their municipalities the authority upon popular vote, under reasonable regulations, to build and operate public utilities, or to build and lease the same, or to take over works already constructed. It is also recommended that provision be made for a public authority with power all public utilities a uni- records and accounts, al data and all informa- the quality of service and which data shall be pub- the cost thereof, w

lished and distributed to the public like other official reports, and, furthermore, that no stock or bonds for public utilities shall be issued without the approval of some competent public authority. In case the management of public utilities is left with private companies, the public, it is urged, should retain in all cases an interest in the growth and profits of the future, either by a share of the profits or a reduction of the charges, the latter being preferable, as it inures to the benefit of those who use the utilities, while a share of the profits benefits the taxpayers.

It will not escape attention that the committee directs attention to the danger of turning over public utilities to the present government of some of our cities. The conditions in Great Britain are regarded as distinctly favorable to municipal operation, and the level of municipal government in the United States is not believed to be up to the standard reached in British cities. The committee refers to the idea entertained by many people that the mere taking by the city of all its public utilities for municipal operation will at once result in ideal municipal government through the very necessity of putting honest and competent citizens in charge, and says that while an increase in the number and importance of municipal functions may have a tendency to induce men of a higher type to become public officials, this of itself will not accomplish municipal reform. In short, the signers of the report are unable to recommend municipal ownership as a political panacea. On the broad general question of municipalization or not, the committee holds that the general expediency of either private or public ownership is a matter to be determined by each municipality in the light of local conditions. In any case the people must remember that it requires a large class of able men as city officials to look after the matters involved, and that municipal ownership will create a large class of employees who may have more or less political influence. Taken as a whole, the report must be regarded as a very conservative document. Sweeping conclusions are conspicuously absent, and the importance of local conditions of one kind or another as elements in success or failure is emphasized. In brief, the recommendations of the committee may be characterized as counsels of precaution, upon which, perhaps, it is well that at this stage emphasis should be laid.

UNITED STATES STEEL'S RECORD QUARTER.

It was fully expected that the quarterly statement of the United States Steel Corporation, covering its operations during the months of April, May and June, would be a favorable one, but even the largest estimates of the net earnings for that period were exceeded by the actual figures, which showed net earnings of $45,503,705, as compared with $40,125,033 in the corresponding three months of 1906. Not only did these earnings exceed those of any other June quarter in the history of the organization, but they were, in fact, the largest for any three months since it was formed, being $4,869,215 above the record-breaking net returns of the December quarter of 1906. The following gives a comparison by months for the first six months of 1907 and the corresponding portions of the years 1906 and 1905:

	1907	1906	1905
January	$12,838,703	$11,856,375	$6,810,847
February	12,145,815	10,958,275	6,629,463
March	14,137,974	13,819,840	9,585,586
First quarter	39,122,492	36,634,490	23,025,896
April	14,600,838	12,581,902	9,037,925
May	16,056,832	14,041,601	10,602,187
June	14,846,035	13,501,530	10,665,004
Second quarter	45,503,705	40,125,033	30,305,116
Total, six months	84,626,197	76,759,523	53,331,012

This may be supplemented by the detailed statement for the quarter just ended, as well as the similar figures covering the results of the first six months of 1907, compared with the similar part of 1906:

Quarter ended June 30	1907	1906
Net earnings	$45,503,705	$40,125,033
Sinking funds subsidiary companies	595,670	547,756
Depreciation, etc	6,127,560	5,604,289
Total	6,723,230	6,152,045
Balance	38,780,475	33,972,988
Interest on bonds	5,662,385	5,718,162
Sinking fund U. S. Steel	1,274,578	1,218,801
Total	6,936,963	6,936,963
Available for dividends	31,843,512	27,036,025
Dividend on preferred	6,304,919	6,304,919
Available for common	25,538,593	20,731,106
Dividend on common	2,541,513	....
Surplus	22,997,080	20,731,106
Special funds	1,000,000	2,500,000
Special appropriations	18,500,000	13,000,000
Total special deductions	19,500,000	15,500,000
Final surplus	3,497,080	5,231,106
Half year ended June 30		
Net earnings	84,626,197	81,869,997
All int., s. f. and reg. dep. and res.	24,751,677	26,162,995
Available for dividends	59,874,520	55,707,002
Dividends on preferred	12,609,838	12,609,838
Available for common	47,264,682	43,097,164
Dividends on common	5,083,026	....
Surplus	42,181,656	43,097,164
Special funds, etc	35,000,000	32,000,000
Final surplus	7,181,656	11,097,164
Previous surplus	97,720,714	84,738,451
Total surplus	104,902,370	95,835,615

In other words, the Steel Corporation, in the June quarter and in the first six months of 1907, earned, after paying its charges, sinking funds and preferred stock dividends, about ten times the proportion of the 2 per cent. per annum dividends on its common shares. Moreover, it has kept up its policy of charging a large sum out of the earnings for construction and similar purposes, the amount charged to such accounts for the quarter under consideration being $19,500,000. While pursuing this course, it is, of course, not to be expected that the dividend rate on the common would or could with propriety be increased. So fully understood is this matter that Wall street at large neither expected an increase in the rate nor felt any disappointment because the directors on last Tuesday made no change in the regular ½ per cent. quarterly distribution on the common shares.

Another reason for conservatism was furnished by the record as to orders and new business. The tonnage of unfilled orders on the books of the subsidiary companies on June 30, 1907, and at the conclusion of each quarter to March 31, 1903, inclusive, is as follows:

Quarter ended	1907	1906
June 30	7,603,878	6,809,589
March 31	8,043,858	7,018,712
	1906	1905
December 31	8,489,718	7,605,086
September 30	7,936,884	3,855,377
June 30	6,809,589	4,829,655
March 31	7,018,712	5,579,560
	1904	1903
December 31	4,696,203	3,215,123
September 30	3,027,436	3,278,742
June 30	3,192,277	4,666,578
March 31	4,136,961	5,410,719

This, coupled with the fact made public by the officers of the corporation, that since July 1 the amount of new orders booked has decreased 25 per cent. from the record of a year ago, would seem to show that the remarks made a few weeks ago by leading members of the management about a probable decline in business activity were well founded, though Wall street and the public at large had failed to realize the extent of the decline.

DETAILS OF THE FISCAL YEAR'S FOREIGN TRADE.

Final returns of foreign trade for the fiscal year 1907 are not materially different from those already published, but are of interest because showing that while import trade expanded largely in all lines, our export trade in foodstuffs fell off slightly, and that chief credit for the increase in exports is due to the exports of crude materials for use in manufacturing, notably cotton, which furnished $80,000,000 of the $93,000,000 gain in this branch of export trade, and the $137,000,000 gain in all domestic exports.

The Bureau of Statistics this week published its detailed report of the country's foreign trade for the fiscal year ending June 30, 1907, with comparisons for the preceding fiscal year:

DOMESTIC EXPORTS.

	1907	1906	*Increase*
Foodstuffs and food animals	$167,323,674	$177,216,467	*$9,892,793
Foodstuffs, prepared	345,676,856	347,385,462	*1,708,606
Crude materials	593,907,939	500,536,700	93,371,239
Partly manufactured	250,613,878	226,210,513	34,403,365
Manufactures	479,700,679	459,812,656	19,888,023
Miscellaneous	7,330,930	6,791,584	539,346
Total domestic	1,854,553,956	1,717,293,382	137,260,574
Foreign mdse exp	26,138,741	25,911,118	227,623
Total exports	1,880,692,697	1,743,864,500	136,828,197

IMPORTS.

	1907	1906	*Increase*
F'dstuffs and animals	$150,074,765	$134,315,448	$15,759,317
Foodstuffs, prepared	158,340,736	140,358,114	17,982,622
Raw materials	477,505,154	414,687,099	62,817,155
Partly manufactured	274,249,005	220,293,751	53,950,254
Manufactures	363,660,918	307,681,622	55,979,296
Miscellaneous	10,590,850	9,220,512	1,370,338
Total imports	1,434,421,425	1,226,562,446	207,858,979

* Decrease.

In imports, it will be seen, every branch of trade shows gains, ranging from 12 and 13 per cent. in the case of crude and prepared foodstuffs to 15 per cent. in the case of crude materials for use in manufacturing, 24 per cent. in the case of partly manufactured goods, and 18 per cent. in the case of manufactures ready for consumption. In exports the features are the 5.6 per cent. loss in exports of crude food products and the fraction of 1 per cent. loss in prepared foods, while the exports of crude materials for use in manufacturing increased 18.6 per cent., partly prepared goods for further use in manufacturing increased 15 per cent., and manufactured goods increased 4 per cent. The directions in which foreign trade has expanded or contracted during the past fiscal year are shown in the following tables, which show the imports and exports by grand divisions and by leading countries:

IMPORTS.

	1906	1907
Europe	$632,202,184	$747,201,255
North America	235,353,322	263,576,349
South America	140,422,876	160,165,537
Asia and Oceania	204,865,320	242,260,820
Africa	12,628,735	21,127,464
Principal countries—		
United Kingdom	210,029,437	246,112,047
Germany	135,142,996	161,544,552
France	108,415,350	127,803,445
Netherlands	27,007,107	32,454,016
Canada	68,237,653	73,334,615
Mexico	50,961,177	57,233,416
Cuba	84,979,821	97,441,690
Brazil	80,416,524	97,881,158
Chinese empire	28,531,207	33,436,542
Japan	52,551,520	68,910,594

EXPORTS.

	1906	1907
Europe	$1,200,166,036	$1,298,203,909
North America	308,382,972	349,840,641
South America	75,159,781	82,157,174
Asia and Oceania	140,593,361	133,889,857
Africa	19,562,350	16,511,026
Principal countries—		
United Kingdom	583,090,123	607,592,682
Germany	234,742,102	256,653,060
France	97,892,480	113,604,692
Netherlands	95,471,593	104,450,319
Canada	156,736,685	183,206,667
Mexico	58,188,278	66,248,098
Cuba	47,763,688	49,305,274
Chinese empire	43,774,375	25,704,532
Japan	38,464,952	38,770,660

Imports from Europe provided $115,000,000 of the $209,000,000 increase in the grand total, while $98,000,000 of the $137,000,000 gain in all exports went to that continent. It is notable that while imports from all geographical divisions and leading countries gained, exports to Asia fell off, owing to heavily reduced takings by China, and made for a loss of $18,000,000 in that country's purchases from us, which reduction measures the loss in all takings by Asia. This reduction is explained by the falling off in our sales of cotton cloth to China, that country taking only 83,367,188 yards of cloth, valued at $5,534,919, as against 475,021,781 yards, valued at $28,091,416, in the preceding fiscal year, a reduction of 80 per cent. in both quantity and value.

JULY BANK CLEARINGS.

Bank clearings for July, as reported to BRADSTREET'S, are larger than a year ago, not only outside of New York, as has been the normal condition for some time past, but also at the metropolis itself. As to the reasons for this latter expansion, it might be noted that stock speculation will not explain it, because the July totals of sales of stocks and bonds, while larger than those for June, were respectively 21 and 30 per cent. smaller than the like totals a year ago. The fact appears to be that July this year saw a great deal of business settled for, which would ordinarily have been done in June. In other words, it is probable that July clearings this year were swelled largely by overdue collections, which usually appear in the April, May and June totals, but which were delayed this year owing to the backward spring.

The total clearings at ninety-seven cities for the month of July aggregated $12,257,040,413, a gain of 10.6 per cent. over June, and of 5.8 per cent. over July a year ago. The clearings at New York City aggregated $7,311,762,404, a gain of 14.8 per cent. over June, and of seven-tenths of 1 per cent. over July, 1906. The clearings at ninety-six other cities for the month were $4,945,278,009, a gain of 5 per cent. over June, and of 14.4 per cent. over July a year ago.

The monthly clearings at New York and at all other cities reporting compare with preceding months of 1906, 1905 and 1902 as follows:

[Six figures omitted.]

	New York City				*Outside New York*			
	1907	1906	1905	1902	1907	1906	1905	1902
Jan	$6,638	$11,238	$7,735	$6,920	$5,273	$5,007	$4,050	$3,634

* Contains other items than clearings, hence excluded from totals. § Not included in totals because of incomplete comparisons.

Bank clearings at ninety-seven cities for seven months of the calendar year aggregated $89,285,888,832, a decrease of 2 per cent. from 1906. New York City clearings furnished $55,214,776,389 of this sum, a decrease of 8.5 per cent. from a year ago, but the ninety-six other cities' clearings aggregated $34,071,112,443, a gain of 10 per cent. over the same period a year ago.

Canadian clearings for July aggregated $378,337,157 and those for seven months aggregated $2,396,950,234, gains of respectively 17 and 10.8 per cent. over the corresponding periods one year ago.

EDITORIAL NOTES.

In accordance with the programme which the controlling factor in the company's management made public a week in advance, the directors of the Southern Pacific Company have placed the common stock of that corporation on a 6 per cent. dividend basis. As the action had been known and discounted in advance, its effect on the stock market was slight. In fact, when the formal announcement was made on last Thursday, there were more or less of the usual realizing sales which are to be expected on the actual appearance of any piece of good news which Wall street has been anticipating with interest. The declaration of the regular dividend on Union Pacific stock was delayed by the absence of a quorum of the company's directors, and action on this matter was accordingly delayed for a week. The most important development in connection with the Harriman railroad dividends seemed to be the fact that Mr. Harriman himself was quoted as taking a rather optimistic view of the securities market and as predicting that the present congestion of new bonds will not continue, the prospect, in his opinion, being that a demand for bonds will come with a rush.

The Census Bureau, having perfected its arrangements for collecting cotton-ginning statistics for the cotton crop of 1907-08, announced its programme for the coming season early in the current week. There are to be ten reports, the first appearing on September 8, 1907, and the last on March 20, 1908. The intermediate dates of publication will be October 2 and 25, November 8 and 21, December 8 and 20 and January 9 and 23. In each instance, except in that of the March report, the statement will represent the condition of the crop about a week before the date of publication. The report of March 20 will deal with the ginning done up to March 1. As heretofore, the agents will have six days in which to visit the ginneries and secure the returns. Summaries of these will be telegraphed to the bureau on the last day of the canvass. On the day following the close of the canvass these telegraphic summaries will be added and the results will be given to the public. The reports will be printed and mailed within twenty-four hours after publication to all ginners and to all others interested. Last season these reports were published at 2 p. m. on the day following the close of the canvass, but this season the bureau will endeavor to publish the results at 10 a. m. The publication at this hour will permit the results to reach Europe within trading hours on the day they are published in America. This is in line with the earnest requests of European spinners of American cotton.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Note—Indorsement—Joint Maker.

The Supreme Court of Illinois held, in the case of Kistner vs. Peters, that the indorsement upon a note by the payee of a statement that he acknowledges himself a part maker of the note with one of the parties whose names are signed to the note is not sufficient to render him a joint maker.

Confusion of Goods—Stolen Jewelry.

The Texas Court of Civil Appeals held, in the case of Rabe vs. Jourdan, that where a purchaser of rings and gems from a thief had intermixed them with his own stock so that neither he nor the owner was able to distinguish them from the others, such act of commingling amounted to a refusal of the owner's demand for the goods.

Telephone—Burden—Compensation.

The Supreme Court of Alabama held, in the case of Hobbs vs. Long Distance Telephone & Telegraph Company, that the poles and wires of a long-distance telephone strung along a public road do not constitute an additional burden which will entitle the fee owner to compensation unless he shows that there will be an actual and substantial injury to his property,

Carriers—Statutes—Regulating Commerce.

The Supreme Court of South Carolina held, in the case of Skipper vs. Seaboard Air Line Railway, that statutes requiring a carrier receiving baggage for transportation into another state over connecting lines, in case of loss, to adjust the loss with the shipper or inform him as to where the loss occurred, or produce a receipt from the carrier to whom it delivered the property, unless it proves that with the exercise of due diligence it has been unable to trace the property, and holding the initial carrier liable to the shipper, permitting it to recover over against the carrier liable for the loss, do not constitute an unconstitutional interference with interstate commerce.

Statute of Frauds—Notes—Agreement.

The Supreme Court of Nebraska held, in the case of Patrick vs. Barker, that an agreement made by the president of a bank with a proposed purchaser of its stock that the bank would accept certain notes and mortgages held by him, amounting to the face value of said stock, in payment therefor, and that if such purchase were made he would hold the purchaser harmless and indemnify him against any action of the bank to recover any further or other amount, either on his indorsement of said notes or otherwise, in payment for said stock, was not a contract to answer for the debt, default or miscarriage of another, and that where by reason of such agreement the bank stock was actually purchased and paid for according to its terms, such purchase was a sufficient consideration to support the agreement.

Insurance—Statement—Evidence.

In the case of Metropolitan Life Insurance Company vs. Ford, recently decided by the Kentucky Court of Appeals, it appeared that a deceased policy-holder of the company in his application for the policy stated that he had not applied for and been refused insurance in any other company. In an action on his policy it was shown in evidence that he had applied for a policy in another company a very short time before the policy sued on was obtained, but had not received the policy and had not had notice that it had been rejected. The court held that the burden was on the company to show that the rejection had been made known to the deceased before he applied for the policy sued on, and that in the absence of such proof it would be presumed that his answer was correct.

Foreign Corporation—Local Agent.

The Supreme Court of Minnesota held, in the case of Thomas Manufacturing Company vs. Knapp, that where a foreign corporation ships its goods to a distributing warehouse within the state, where they are received and forwarded by a distributing agent, under a special contract on the order of the corporation, to parties within the state, under contracts contemplating their sale at retail within a defined territory, and providing that the title to the goods and the proceeds of the sales in the corporation until it thereof shall remain nt of the contract price, and receives the full amou nder certain conditions may that the corporation with numerous other provisions inconsistent wit a sale and consistent only with an agency), such a corporation is doing business in the state through local agents established therein. The court further held that in an action by a foreign corporation against its agent to recover money received by the agent for its use, the agent is not estopped to show that the corporation has not complied with chapters 69 and 70 of the General Laws of 1890, and that where the action is upon a promissory note the maker may show as a defense that he was the local agent of the corporation engaged in selling its goods in the state under the terms of a written contract, and that the note represented the proceeds of sales of such goods for which he was liable under the contract.

Railroad—Consolidation—Eminent Domain

The Supreme Court of Indiana held, in the case of Smith et al. vs. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, that the appellee company was so far legally organized by incorporation, consolidation and otherwise that it had authority to take land for railroad purposes under the power of eminent domain; that a consolidated corporation succeeds to the rights of eminent domain possessed by its constituent companies, and that a railroad may take land to any necessary width for a limited distance in order to make a local cut or embankment.

Receiver—Affidavit—Verification — Notice.

The Supreme Court of Indiana held, in the case of Henderson vs. Reynolds, that an affidavit for the appointment of a receiver sworn to only "to the best of affiant's knowledge and belief" was not sufficient to justify a court in appointing a receiver without notice, but that such affidavit, to be admissible evidence, must be verified in positive terms. The court further held that the necessity for the immediate harvesting of a crop, and plaintiff's fear that the defendant would cut and appropriate it to his own use if given notice, formed no excuse for failure to give notice before appointing a receiver where no reason was shown for not giving notice and not applying for a receiver earlier.

Publication—Complaint—Libel.

The Supreme Court of Minnesota held, in the case of Nixon vs. Dispatch Printing Company, that the publication of judicial proceedings, if fair and impartial, is privileged, but that a complaint or other pleading in a civil action which has never been presented to the court for its action is not a judicial proceeding within the rule, and that its publication, if it contains libelous matter, can only be justified by showing that it is true. The court said: "It is true, as claimed by counsel for defendant, that a complaint when filed in the office of the clerk of the court becomes a part of the records in the action, and that by virtue of the statute the clerk must exhibit the records in his office for the inspection of any person demanding the same free of charge, except in cases where fees are provided by law, and then upon tender of such fee. This right, however, does not authorize the person inspecting the record to make an improper use thereof or to publish to the world through the medium of the press libelous matter contained in the record."

Railroad—Fire—Spark Arrester.

The Kentucky Court of Appeals held, in the case of Southern Railway Company in Kentucky vs. McGeoughey, that in an action against a railroad company for setting fire to a barn 260 feet from the right of way by sparks from a passing train, where no eye witness saw the cinders or sparks flying from the train, or the fire when it started, the truth must of necessity be arrived at by evidence of a circumstantial nature, such as that the weather was dry, that inflammable material was scattered between the railroad and the barn, that there was a strong wind blowing, and that cinders large enough to ignite material were found near the burned building. The court said that the evidence of employees that the engine was furnished with a first-class spark arrester in good condition and that the engine was carefully handled were facts to be considered in connection with the other physical facts and circumstances in determining whether the fire was occasioned by sparks or cinders from the engine, and, on the other hand, that although the engine was equipped with the best spark arrester in general use, yet if the engineer was negligent in the management and operation of the engine the company was liable for fires resulting from such negligence, but that the jury under all the proof had a right to infer that either the spark arrester was not sufficient or that the engine was handled in a negligent manner.

BUSINESS NOTES.

New Railway Enterprises.

Railway construction continues surprisingly active and to the projection of new lines there is no end, judging from the weekly record of the *Railway Age*. The last issue of that paper, for example, gave information concerning the incorporation, promotion or progressing construction of seventy-eight different roads. In the first six months of the year its construction department contained 1,015 reports of roads under construction or projects (some of the names, of course, being repeated), an average of about forty roads each week, and the number of enterprises requiring attention is increasing steadily. In this connection our contemporary says: "How many will pass successfully the period of financing remains to be determined by the public temper in regard to corporate securities. In a few instances promoters are undertaking to raise the necessary capital by selling the stock of their companies in advance, along the proposed lines, a method of financing which may be entirely legitimate, but which hitherto has not been found workable."

Transactions on New York Stock Exchange.

Dealings in stocks on the New York Stock Exchange in July aggregated 12,797,738 shares, an increase of 3,063,379 shares as compared with the previous month, but a decrease of 3,502,820 shares as compared with July, 1906. Last month's total was the smallest in any July since 1900. Trading by months is set out in the following:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
May	15,755,363	33,959,500
June	9,734,359	21,666,500
July	12,797,738	25,348,700
Total	129,256,299	263,395,100

Comparisons on stock trading back to 1900 follow:

	July	*Seven months*
1907	12,797,738	129,256,299
1906	16,300,558	164,390,078
1905	13,018,538	150,659,420
1904	12,134,845	62,770,441
1903	14,780,826	96,988,752
1902	16,317,957	103,865,277
1901	15,920,898	191,719,331
1900	6,274,439	72,220,650

Bond dealings back to 1900 follow:

	July	*Seven months*
1907	$25,348,700	$263,395,100
1906	36,510,500	433,013,300
1905	54,346,000	636,156,200
1904	62,070,960	368,262,960
1903	57,513,600	399,370,450
1902	71,962,200	559,284,600
1901	49,477,000	686,471,720
1900	23,708,900	313,990,260

Copper and the Electric Age.

"The nineteenth century was the age of steel, and the twentieth century, in its beginning at least, is the age of electricity. Electricity demands copper in ever-increasing quantities. For the last six decades of the nineteenth century," says the "Copper Handbook for 1906," published by Horace J. Stevens, of Houghton, Mich., "the production of the leading metals increased at the rate of almost exactly 6½ per cent., compounded yearly, but in the last decade of the century copper left the other metals behind, and for fifteen years past the average ratio of increase in copper production has been 8 per cent., compounded yearly. This difference of only 1½ per cent. in the ratio of yearly increase may seem small, but like the fable of the horse's shoes, for which the first nail brought a penny, and each nail thereafter was doubled in price, the cumulative results are surprising, and at the end of fifteen years have run into hundreds of millions of dollars. In 1881, a quarter century past, the world's production of copper was 163,000 long tons, worth an average of 18 cents a pound, giving a total value of $65,000,000 in round figures, while at the present moment the copper mines of the world are producing at the rate of nearly 800,000 tons per annum, worth, with copper at a little more than 20 cents a pound, $1,000,000 for every day in the year, or at the rate of $365,000,000 for 1906—an increase of almost fivefold in the world's copper bill in a quarter of a century."

Trade with Non-Contiguous Territories.

The value of merchandise sent from the United States to all of its non-contiguous territories in 1907 was over $67,000,000, while that of France to all her colonies was, in the latest available year, $113,000,000; Netherlands to her colonies in the latest available year, $30,000,000, and from Germany to her colonies, $11,000,000 in the latest year for which statistics are available; while from the United Kingdom the exports to all British possessions were in 1906 $590,000,000. The value of merchandise received from all of the non-contiguous territory of the United States was $75,000,000, while the imports into France from all of her colonies were, in the latest available year, $87,000,000; into Netherlands from the Dutch colonies, $161,000,000; Germany from German colonies, $4,333,333, and into the United Kingdom from her colonies, $692,000,000. The following table shows the trade of the United States with its non-contiguous territories in 1907, compared with the figures for 1897:

Imports from—	1907	1897
Alaska	* $12,155,198	$3,975,000
Hawaii	29,071,813	13,687,709
Porto Rico	22,070,133	2,181,024
Philippine Islands	11,510,438	4,383,340
All other	108	....
Total	74,807,690	24,227,073
Exports to—		
Alaska	18,402,765	3,926,000
Hawaii	14,435,725	4,690,075
Porto Rico	25,686,265	1,988,888
Philippine Islands	8,661,424	94,597
All other	64,407	....
Total	67,250,586	10,699,560

* Exclusive of $18,583,702 worth of goods produced in and shipped into the United States from Alaska.

National Bank Development.

The status of our national banks on June 30, 1907, as compared with June 30, 1905, shows a large strengthening in the two years. Here are the figures of the Comptroller of the Currency:

	June 30, 1907	*Increase in two years*
Number of banks open	6,521	771
Authorized capital	$898,156,275	$96,825,960
Circulation on bonds	555,570,881	92,901,466
Bonds on deposit	558,442,910	90,375,970
Circulation, lawful money	48,217,809	15,167,417
Total circulation	603,788,690	108,068,883
Banks organized in fiscal year 1906		470
Banks organized in fiscal year 1907		490
Banks liquidated, etc., in 1907 fiscal year		76
Net increase in banks in that year		414
Capital of 1907 fiscal year organizations		34,015,000
Capital increase in 1907 by old banks		31,067,500
Total capital increase in 1907 fiscal year		65,082,500
New banks chartered since March 14, 1900		3,510
Total capital		207,893,300
Where located	*No.*	*Capital*
Middle western states	985	$62,927,500
Southern states	889	50,724,500
Eastern states	575	45,211,500
Western states	807	27,141,000
Pacific states	208	15,623,800
New England states	40	5,515,000
Hawaii	4	600,000
Porto Rico	1	100,000
Alaska	1	50,000
Total	3,510	207,893,300

Texas leads the country in the number of new banks with 381, which have $17,181,000 capital, while Pennsylvania leads in new capital, $25,187,000 in 340 new banks. It is particularly worth noting that Oklahoma has 295 new banks, with $9,180,000 capital. When admitted as a state Oklahoma will come to us with ample resources.

Some Phases of the Foreign Outlook.

"Several points of foreign interest are attracting attention at the present time,' says the *Wall Street Journal*. "Among them is the progress of Japanese control in Korea. Another is the developments along the Russian frontier of Siberia, including the building of the Amoor River Railroad, giving to Russia a complete line within her own territory to the Pacific, and the other is the exploring expedition which the Russian Geographical Society is sending out through the country of Tibet. The Geographical Society is nominally an exploring organization, but politically and commercially it represents the advance guard of Russian influence in the effort to extend her frontier and to widen the range of her markets. Conditions in Egypt suggest another great service which has been rendered by European powers in placing that country upon a more businesslike footing, both in its public finance and in private enterprise. Yet there is much to do there. The Egyptian situation has been brought to a crisis, not, as some people presume to intimate, by the undue extension of the cotton-growing industry, but by the land speculating officials and hangers-on of government, who have together helped to create a condition which is now giving the European banking world some concern. In Africa, especially in British possessions, there has been a fairly prosperous fiscal year. Germany's colonial policy, with the imperial secretary on the spot, begins a more businesslike era of activity. South America and Australia are both securer financially than they have ever been before. These conditions suggest that none of the great continental divisions show any signs of general danger. The broad outlook is good. In most of the less advanced countries two dollars of capital could be profitably used where there is one available."

CURRENT BUSINESS NEWS.

Commercial.

The following was the value of French foreign trade in the first six months of the last two years:

	1907	1906
Imports—		
Food	F479,834,000	F391,398,000
Raw materials	2,058,394,000	1,963,691,000
Manufactures	555,905,000	493,624,000
Total	3,094,133,000	2,848,713,000
Exports—		
Food	338,810,000	307,749,000
Raw materials	785,292,000	720,712,000
Manufactures	1,431,044,000	1,294,978,000
Post parcels	205,449,000	200,495,000
Total	2,760,595,000	2,523,934,000

The exports of post parcels comprised 20,389,000 francs of silk goods, against 16,542,000 francs in 1906.

The Minneapolis *Market Record* estimates the spring-wheat crop at 112,000,000 bushels for the three northwestern states, excluding 50,000,000 bushels durum. The total crop last year was 175,000,000 bushels, as given by the government report.

The foreign commerce of Mexico during April and for the ten months of the fiscal year ended on June 30 was as follows:

April	1907	*Changes*
Imports	$19,599,939	Dec. $321,621
Exports	21,363,008	Inc. 4,773,424
Total trade	40,962,947	Inc. 4,452,403
July 1 to April 30		
Total trade	395,952,308	Inc. 2,343,986

Of the total imports during the month of April, 1907, which amounted to $19,599,939, mineral substances contributed $6,720,893, vegetable substances $2,840,368, dry goods $2,443,731, machinery and apparatus $1,934,349, animal substances, $1,515,663, and vehicles $1,015,806. Of the countries which supplied the merchandise represented by the foregoing figures, and other materials for which the total amount in each case was less than $1,000,000, the United States stood first by all odds with $11,904,704, or considerably more than one-half the grand total. Great Britain came next with $2,256,014, France was third with $1,717,719, and Germany fourth with $1,563,417. Canada contributed to the extent of $36,403.

The new Brazilian immigration law favors the coming of Japanese labor, and it is largely to this end that a subsidy is offered for the establishment of a regular line of ships between Rio de Janeiro and Japan. Mr. Uchida, who presented his credentials as Japanese minister to Brazil on June 3, in the course of conversation, declared that in the consummation of these proposals is to be found the principal aim of his mission. The new steamship line, according to Mr. Uchida, will be in operation as soon as arrangements can be perfected, and will probably touch at the west coast ports of Ecuador, Peru and Chile, and passing through the Straits of Magellan visit Buenos Aires, terminating the voyage at Rio de Janeiro. The purpose would be to bring to Brazil in these ships Japanese coolies to engage in rice growing.

The foreign commerce of leading American ports for the fiscal year ending June 30 was:

New York	$1,450,000,000	Philadelphia	$174,000,000
Galveston	251,000,000	Baltimore	145,000,000
Boston	230,000,000	San Francisco	93,000,000
New Orleans	217,000,000		

The Weather Bureau at Washington on Tuesday issued its usual summary of weather conditions. It follows: Very hot weather prevailed over the central and eastern portions of the southern states during the week ending July 29, and the mean temperature was normal or slightly above on the middle Atlantic coast, in the west gulf states, on the south Pacific coast, and over most of Washington and Oregon. Weather was unseasonably cool in the southern plateau region and the upper Missouri valley, and somewhat cooler than usual in the lake regions, the upper Mississippi and Ohio valleys and northern New England. Rain is badly needed in Texas and Oklahoma, and the need of moisture is beginning to be felt in portions of Mississippi, Tennessee, southern Indiana, the middle Atlantic states and southern New England. Elsewhere east of the Rocky mountains there is generally ample moisture for present needs.

The Appellate Division of the New York Supreme Court, Second Department, recently held, in the case of Halstead et al. vs. Postal Telegraph Cable Company, that a regulation by a telegraph company that it will not be liable for mistakes or delays in the transmission or delivery or for non-delivery of any unrepeated message beyond the amount received for sending the same was a reasonable one, and that where a third person, in response to a request by the plaintiffs, delivered to the defendant telegraph company a message addressed to and for transmission to the plaintiffs, and written on a blank furnished by the defendant containing a notice of the regulation mentioned, the defendant was not liable for damages sustained by the plaintiff through an error in transmission, by which a quotation for cotton goods, which as delivered to the company read "two-eighty wide three-eighty net," read when received by the plaintiffs "two-eighth wide three-eighth net." This decision, rendered by a vote of three to two, reverses a judgment secured by the plaintiffs at a trial term of the court in March of last year.

Foreign crop conditions as published Tuesday in Broomhall's *Corn Trade News:* United Kingdom — The favorable weather during the week has caused improvement and forced harvesting. The first cutting of oats occurred last Saturday, and the prospects are that the cutting of wheat will be general next week. The cutting of wheat is usually general about August 20. France—All reports are of an improved outlook. Harvesting will commence next week in the chief districts. Distant deliveries are selling at 7 shillings discount. The importing of wheat for the present is unlikely. Germany — The weather during the week has been more favorable. Early rye samples show a poor condition. The wheat yield is reckoned as promising 35 per cent. less than last year. Hungary—Shows great variation as regards both yield and quality. The corn crop is badly in need of rain. Austria—Recent heavy rains caused much damage to outlying crops. Bulgaria—New wheat is arriving in small lots and bringing high prices. The prospects for corn have been improved by the recent rains. Turkey—The outlook on the whole is good, and the yields in some districts will be above expectations. Russia—The winter-wheat crop has been harvested and is in a poor condition. Poland sends very bad reports. The reports of spring crops are less favorable. Italy — New wheat is being offered freely. Sweden — The outlook for the crop shows an improvement, but is very backward. Norway—Reports received are unfavorable. Tunis—Yields are above expectations. Algeria — The crop is backward and the yield will be below last year. Australia — General rains have fallen. Asia-Minor—The outlook for the crop is poor.

Cable advices received at the Department of State from the American consul at Harbin are to the effect that the cereal crops throughout northern and central Manchuria are very badly injured, owing to severe drought. It is estimated that this season's crop in that region will be only one-fourth of the average yield, in consequence of which the price of wheat is already rapidly advancing. It is believed that this shortage in the wheat crop of Manchuria, its staple article of production, will result in an increased demand for American flour.

The Russo-Japanese treaty of commerce and navigation and the fishery convention were signed Saturday. Both will be published after an exchange of ratifications. M. Kurino, Japanese minister to France, says that the treaty on commerce and navigation embraces five subjects: Commercial relations, fishery rights, the junction of the Manchurian railroads, the delimitation of frontiers, and political relations. The clause dealing with the last-named subject is a duplicate of the Franco-Japanese agreement for the maintenance of the status quo.

According to Paris dispatches, what has been characterized as the obstacle in the way of the continuation of the tariff negotiations between France and the United States has been removed. France has notified the United States that she had extended from August 1 to October 1, 1907, the decree providing for the collection of the minimum duty on coffee brought in from Porto Rico. The negotiations will now proceed between Ambassador White and the Foreign Office.

A Broomhall cablegram from Russia, published Wednesday, read: "Latest advices are that the weather has become favorable, rains having stopped. It is expected that the new crop will shortly commence to arrive freely. Arrivals of barley are liberal. Odessa reports rather liberal arrivals of new wheat."

It is announced officially that the French government has decided to adhere to the Brussels sugar convention of 1903. Notice of withdrawal from it must be given twelve months before the expiration of the convention in September of the next year.

The Baltimore *American* estimates the wheat crop of Maryland at 15,000,000 bushels, the money value of which is expected to reach $12,000,000. Moreover, the crop is the largest since 1900, when the yield was 15,188,000 bushels. Maryland's crop in recent years was as follows: 1900, 15,188,000 bushels; 1901, 13,315,000; 1902, 11,129,000; 1903, 10,121,000; 1904, 10,328,000; 1905, 13,197,000; 1906, 12,902,000.

The Interstate Commerce Commission has ordered a reduction from 41 cents to 35 cents per hundred pounds in the rate on cotton waste from Augusta, Ga., to New York City.

Consul-General R. P. Skinner reports that within a year between 3,000 and 4,000 tons of petroleum coke have been received from the United States at Marseille, concerning which he says that if American manufacturers of this article would put themselves in touch with French purchasers, with a view to perfecting the product, a market could be created in which price would be a matter of very secondary consideration. American petroleum coke has a heating power exceeding by one-half that of ordinary coke, leaves no ash, but produces abundant smoke. It cannot compete with ordinary coke in the metallurgical industries, owing to its high price, and its future lies in the reduction of chemicals if the smoke it now yields can be eliminated.

Broomhall reports that new La Plata wheat sells for winter shipment at a price equal to 99 cents.

Major O. Long, dispatched to Australia and New Zealand by the British Army Council to inspect the packing houses, says that supplies in the future will be taken in greater quantities from Australia, where now about one-third of the total supply was bought.

The Ogilvie Flour Mills Company, Limited, makes the position of the Manitoba, Saskatchewan and Alberta wheat crop of 1906, on July 20, as follows:

Inspected to July 20, delivered at Winnipeg and shipped south	70,054,700
In stock C. P. R., interior	5,230,900
In stock C. N. R., interior	500,000
	5,730,900
In transit west of Winnipeg, 400 cars at 1,100 bushels	440,000
Ground by interior mills	6,042,000
Seeding 5,000,000 acres at 1¾ bushels	9,000,000
	91,267,600
Yet to market	1,232,400
Total crop	92,000,000
Stocks available—	
Interior	5,731,000
Transit east and west of Winnipeg	940,000
Port	6,551,000
Keewatin	250,000
Winnipeg	200,000
St Boniface	100,000
Yet to market	1,232,000
	15,004,000
Required, west of port	3,044,000
Available for eastern mills and export July 20	11,960,000

Financial.

Plans are progressing for the organization of a stock exchange at Winnipeg, Manitoba. The date for opening the exchange has not been decided as yet.

British consols touched 82 11-16 Monday, the lowest record since 1848.

The Minister of Finance of Buenos Aires has asked Congress for an authorization for the municipality of Buenos Aires to issue a loan of 15,000,000 pesos, gold.

It is estimated that the dividend payments by leading corporations in August will amount to $39,453,575, an increase over 1906 of $4,758,233, and that the total disbursements for interest and dividends for August amount to $76,053,575. The increase in dividend disbursements is due to the increase in rates made by some corporations and to additions made to the dividend rates. Industrial dividends for the month are estimated at $19,633,750, an increase of $2,884,268; steam railroad dividends, $17,764,350, an increase of $1,335,365, and street railways, $2,055,475, an increase of $538,600.

J. P. Morgan & Co. have bought the hitherto unsold balance of the $26,000,000 Atchison 5 per cent. convertible bonds which were offered to the stockholders at par and interest and who subscribed for a little less than $9,000,000 of the issue. Practically $15,000,000 represents the unsold balance which has been taken by J. P. Morgan & Co. No official statement has been made as to the price paid by the bankers, but it is believed to be a little better than 98.

At a special meeting of the stockholders of the Philadelphia, Baltimore & Washington Railroad Company, held Wednesday, the proposition of the directors to increase the indebtedness of the company by $5,000,000 was approved. The additional debt will be secured by bonds or otherwise, as the directors may order. The increase makes the authorized bond issue of the company $25,000,000.

Deputy Comptroller McCooey of New York City announced Tuesday that Governor Hughes had signed the bill permitting the comptroller of the city of New York to sell municipal bonds at private sale, and that $15,000,000 of corporate stock and bonds would be offered on August 12.

The figures for the Cuban budget of 1907-08 were announced Monday. They do not differ materially from those of last year. The total amount is $23,309,538, divided as follows: Provisional Government, $105,980; Departments of State and Justice, $680,265; Government, $8,973,002; Treasury, $3,440,954; Education, $4,195,868; Public Works, $4,445,226; Agriculture and Commerce, $274,988; Judiciary, $1,193,255. The estimated receipts are $25,466,325, of which the customs are $23,046,000 and internal revenue $831,000.

A reduction of ½ per cent. in the semi-annual dividend on the common stock of the Buffalo, Rochester & Pittsburgh Railway was announced Tuesday. At the directors' meeting last week a 2½ per cent. rate was agreed on, which compares with 3 per cent paid semi-annually since the opening of 1904. In 1903 the year's dividends reached 5½ per cent.; in 1902 and 1901, 4 per cent. Prior to 1901 no dividends were paid. The reduction, it was said, is compensated for by the dividend of 2 per cent. which has been declared on the stocks of the Mahoning Investment Company.

Industrial.

The *American Federationist* states that 1,026 labor unions, with an aggregate membership of 81,500, had two-tenths of 1 per cent. without employment in June. In May the ratio of unemployed was 1.7 per cent., and in June, 1906, it was 1.75 per cent.

A cablegram from Rome states that more than 1,000 Italians, mostly destitute, have arrived in Naples from the United States, and that several thousand more are expected shortly.

A great steel-manufacturing center is to be developed on the south shore of Lake Erie, just north of the town of Geneva, Ohio. The Jones & Laughlin Company, independent steel manufacturers, have purchased more than 1,000 acres on the lake front four and one-half miles northeast of Geneva and purpose to move their entire plant to that site. The most potent factor in the upbuilding of this new industrial center is the completion of plans for the immense ship canal to connect Lake Erie and Pittsburgh.

The American Iron and Steel Association has received from the manufacturers complete statistics of the production of pig iron in the United States for the first half of the year 1907. The output for the period mentioned was 13,478,044 tons, against 12,724,941 tons in the last half of 1906, 12,602,901 tons for the first half of that year, and 11,163,175 tons for the first six months of 1905. The outturn of charcoal pig iron in the first half of 1907 was 205,796 tons, compared with 225,285 tons in the last half of 1906. The production of bituminous coal and coke pig iron in the first six months of 1907 amounted to 12,514,014 tons, contrasted with 11,702,492 tons in the last half of 1906.

In the average earnings of male members of labor organizations in the state of New York for the first quarter of 1907, there was a decline compared with the first quarter of 1906 from $212 to $205. This difference of $7 is at the rate of 3⅓ per cent. The course of average earnings, as represented in twenty or more occupations, for the first quarter of the last five years was as follows: 1907, $205; 1906, $212; 1905, $187; 1904, $175; 1903, $186. During the same quarter of this year 13.8 per cent. of the members of labor unions were idle, which was the largest in ten years excepting 1904. Labor disputes were least potent among causes of idleness at the quarter's end. At the end of March 67.3 per cent. of idleness was due to lack of work, compared with 44.9 per cent. in 1906, 52.4 in 1905 and 33.3 in 1904. The probabilities are that the inclemency of the weather caused much idleness in the building trades and thus affected the averages. Yet the average rate of wages per day was $3.04, the highest in any of the first quarters of the five years from 1903 to 1907.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Crops, particularly corn and cotton, have shown further improvement, there is freer buying for fall at leading southwestern markets, shipments of fall goods are expanding, and there is evident a more optimistic feeling as to distributive trade generally, based upon the active trade done of late at retail. Relatively most activity is noted in the larger southwestern markets, at a few central western centers, and at the larger eastern cities. At the south midsummer quiet rules, except at infrequent intervals. In some lines of wholesale trade, such as cotton dry goods, the activity manifested is still notable, considering the long spell of preceding buoyant buying, but other lines display more quiet; and in iron and steel, while production is of record proportions and orders ahead are heavy, new buying of both crude and finished products is less active than a year ago at this time, with price concessions more readily obtainable. Speculation in securities has a bearish tone, reflecting stiffening money rates and predictions of more stringent conditions later on, when fall trade activities expand. Bank clearings for this week are behind a year ago, but for July they exceed last year, largely because reflecting receipt of delayed collections at leading interior markets. July failure returns were irregular, reflecting few failures but large liabilities.

Weather and crop reports are favorable as a whole, and corn and cotton especially have made up much lost ground. Corn is tasseling in the leading surplus states, and the crop as a whole is not much over a week late. There is a good crop of corn at the south. Dry winds have done some damage in the southwest. Spring wheat has not lost much ground, but is not doing as well as the other crops, such as rye, barley and flax. North Dakota reports are relatively the poorest. Rust is prevalent in some sections, but is claimed to have done little damage. Oats will, it is claimed, be a short crop. Rains have helped cotton at the south, and reports as to condition are the best of the year. The fields are clean, the plant is fruiting well, and with favorable conditions henceforth a good crop is possible. Citrus fruits in Florida have been helped by rains. The weather has latterly been too dry in New York and New England, and some complaints are heard.

While the disposition is still to order freely of cotton goods and to pay the high prices asked, there are signs of conservatism at some markets, where mill men themselves are advising against overbuying. Cotton yarns are quieter than of late. Dress goods are active for fall, and silk fabrics are also bought more freely. There is, however, said to be more conservative buying of men's-wear fabrics for next spring.

A notably strong branch of business at present is that of raw wool, particularly fine staple wools adapted to making worsteds. Prices tend upward. The new clip appears to have been well cleaned up, and interest has been transferred to the east, where the new wools are arriving slowly.

In the east business in foundry pig iron has improved a little, but on the whole the markets are listless, and prices have worked lower both for spot and forward deliveries. Bessemer pig is lower, although the leading interest has purchased about 14,000 tons in the Pittsburgh district, or practically all of the available supply there. Structural material is in fair demand, but a number of contracts are being held up on the theory that price concessions will be made by the sellers. New business in steel rails is fairly good, though activity is confined to Chicago. Demand for plates for shipbuilding is quite good. Steel bars, wire and merchant pipe are active. An order for 1,000 steel cars has been placed with a western concern, and it is estimated that about 20,000 tons of structural shapes will be required. Scrap material is lower and bar iron is easier in price. Coke is firmer, the warm weather having operated to reduce production. Bituminous coal is active at the central west, where prices are up 25 cents per ton. Spelter, copper and lead are weaker, and business is very light.

Decreased activity prevails in stock speculation at New York, opinion being adversely influenced by firm money here and abroad, attacks on corporations, and the failure of dividend increases and phenomenal earnings like those of the United States Steel Corporation to stimulate interest in stocks. Operations by bears have been more in evidence, and covering from that quarter creates rallies. Copper stocks were weak on further reported cuts in the metal. Foreign exchange was weak at a decline after having shown considerable early strength, with the shipment of $500,000 gold to Paris. Demand sterling is 4.86.70.

July failures, as reported to BRADSTREET'S, numbered 731, with liabilities of $12,499,491, increases of respectively 3.8 and 73 per cent. over July, 1906. Only three preceding years in the past fourteen, however, had fewer failures than were reported this year in July. On the other hand, liabilities in July were larger than in eleven out of fourteen preceding years. A few large suspensions, notably of manufacturers of cereals and of brick, have swelled the liabilities greatly.

Business failures for the week ending August 1 number 142, against 155 last week, 170 in the like week of 1906, 178 in 1905, 179 in 1904 and 164 in 1903.

Bank clearings for the week ending August 1 aggregate $2,510,191,000, a small fraction of 1 per cent. less than last week and 7 per cent. under this week last year. Outside of New York exchanges amount to $1,001,474,000, 2 per cent. below last week, but 4 per cent. over the week last year.

Wheat, including flour, exports from the United States and Canada for the week ending August 1 aggregated 2,739,836 bushels, against 2,376,543 bushels last week, 2,895,020 bushels this week last year and 6,463,585 bushels in 1901. For the first five weeks of the fiscal year the exports are 12,690,767 bushels, against 9,837,310 bushels in 1906-07 and 27,463,585 bushels in 1901-02. Corn exports for the week are 1,608,121 bushels, against 1,665,044 bushels last week and 623,146 bushels in 1906. For the fiscal year to date the exports are 8,162,611 bushels, against 3,285,699 bushels in 1906-07.

CROPS STILL IMPROVING.

MUCH LOST TIME REGAINED IN CORN AND COTTON. CORN ONE WEEK LATE. HOT WINDS HURT CORN IN SOUTHWEST. SPRING WHEAT MAKING FAIR PROGRESS. OUTLOOK NOT GOOD IN NORTH DAKOTA. RUST DAMAGE REPORTS NOT SERIOUS. RYE, BARLEY AND FLAX DOING WELL IN NORTHWEST. COTTON FIELDS CLEAN. PLANT FRUITING WELL. HOT, SHOWERY WEATHER FAVORS GROWTH. PACIFIC COAST CROPS GOOD. TOO DRY IN NEW YORK AND NEW ENGLAND.

CHICAGO.—Corn has made fair improvement over a large part of the belt. In parts of Illinois and Iowa the stand and condition is as good as last year, but on the whole the crop is not up to the average of a year ago. Only part of the Iowa crop is tasseling, in Illinois the greater portion of the area has tasseled, in Kansas it is tasseling and silking short, and in the southeastern portion it needs rain. A little damage was reported in Oklahoma from dry weather and hot winds last week, but rain has since fallen and temperatures have moderated. Threshing returns on oats are irregular, particularly in Iowa, where yields run 22 to 30 bushels to the acre, with weight 28 to 30 pounds. The crop is not expected to be over 100,000,000 bushels, or 40,000,000 bushels short of last year, and some figure that it will be much shorter. The next government report is estimated to show a loss of 6 to 8 points in the condition of oats and an improvement of 2 to 3 points in corn. Spring wheat has improved over most of the northwestern states and Canada, weather being more favorable, and harvest of early wheat in Minnesota will begin next week. Black rust has been discovered in a number of points in South Dakota and southern Minnesota, but no serious damage has resulted, fine weather preventing its spread. The red rust is more prevalent, with slight injury. Threshing returns on winter wheat show little change from previous reports. The government report next week is expected to give the yield at about 12 bushels to the acre.

CINCINNATI.—Rain has interfered with farmers and there is considerable threshing yet to be done. Some damage is reported. The oats crop is uncertain, and late reports furnish little that would be likely to change views regarding expectations of a short crop. Corn continues to make good progress. Fair crops of hay and timothy are expected.

INDIANAPOLIS.—Harvesting of winter wheat is almost over, and, considering the conditions that prevailed during a considerable part of the growing season, the crop is a very fair one. Oats are in fair condition. Corn is in excellent shape and growing rapidly.

ST. PAUL.—The crop outlook improves daily. Rye is being cut and will be a good crop. Oats and barley promise the largest yields and will average 30 bushels to the acre. Wheat and corn are not doing well in Minnesota, but everything else is. In North Dakota the financial returns from the crop will easily equal those of last year if all the grain in sight matures. Wheat will average between 10 and 12 bushels.

MINNEAPOLIS.—Conditions continue favorable for the maturing and harvesting of crops throughout the northwest. Harvesting has already commenced in northern Minnesota and South Dakota. Wheat will undoubtedly be cut next week, and other grains are already being cut. Rust has appeared on wheat early in isolated localities and has usually disappeared quickly under favorable atmospheric conditions. The weather is generally very favorable.

SIOUX CITY.—Corn is in the tassel and growing well. Small grain shows fair yields. A small amount of rust is reported.

DAVENPORT.—The weather is favorable to growing corn and the harvesting of hay, oats and barley.

ST. LOUIS.—The weather continues favorable to growing crops. Threshing of wheat continues to show good results. Corn is advancing nicely and the yield is expected to be large.

ST. JOSEPH.—The entire territory reports the condition of corn as promising. Hay and pasturage are in good shape.

OMAHA.—Corn is making excellent headway. Wheat threshing is in progress; reports as to quantity and quality are much better than anticipated.

KANSAS CITY.—Growing corn has made some gain during the past week. The crop in Kansas is now reported to be about a week late, as an average, throughout the state. Harvesting of winter wheat is completed, but the crop is moving slowly and considerable remains in the stack in Kansas.

RICHMOND.—Cotton in North Carolina continues to improve. In the sun-cured tobacco belt of Virginia and North Carolina the crop is 25 per cent. short and its condition is fair.

CHARLESTON.—Cotton continues to look fine. Corn is looking unusually well and is ahead of any year in the past five years.

ATLANTA.—The weather has been favorable for all crops, and cotton has been making rapid progress.

AUGUSTA.—Cotton has been greatly benefited by recent rains.

JACKSONVILLE.—Crops and citrus fruits promise better yields, owing to abundant rains.

MACON.—Crops are flourishing under seasonable weather.

BIRMINGHAM.—Farming operations are more satisfactory, though the cotton crop is a little late.

MONTGOMERY.—Weather conditions are good for crops in this section. Cotton is growing rapidly and is reported to be in a healthy condition.

MOBILE.—Cotton shows further improvement.

MEMPHIS.—Recent rains benefited corn and cotton, which continue to make good progress. The fields are clean and well worked.

LITTLE ROCK.—Timely rains have greatly benefited cotton and corn, and farmers are much encouraged. The cotton crop condition is now 80 per cent. The plant is fruiting well and fields are clean.

NEW ORLEANS.—All crops are doing splendidly in this section. It is a little dry in some directions, but, as a rule, there are showers alternating with hot sunshine, which is the most favorable condition possible at this time. There will be a fair yield of corn, possibly enough to supply local consumption.

DALLAS.—Cotton is making good growth and is reported as being in good condition.

WACO.—Dry, hot weather is favorable to growing cotton, and the boll weevil can do no serious damage as long as it continues.

PORTLAND, ORE.—Weather conditions are favorable to the harvest which is now under way, and which promises well.

SPOKANE.—The harvest has commenced and the yield is heavy.

NEW HAVEN.—Owing to excessive dryness, crops are hardly up to the standard.

TRADE REPORTS.

A good volume of business has been transacted at New York in silks, dress goods and cottons. Cotton goods maintain their lead and there is considerable scarcity in some lines. The silk business is steadily improving. Dress-goods orders for the spring of 1908 are much better than earlier expected. Men's-wear woolens are in light demand and there is a tendency to buy carefully for the spring of 1908. Collections with dry-goods commission houses and jobbers are satisfactory, but they are not good with the clothing trade. Trade in cotton yarns is rather quiet, the larger mills being well covered for some time to come, and the smaller ones buying conservatively because of high prices. Worsted and woolen yarns continue active. Manufacturers of cloaks and suits report an increasing business, and collections are good. Wholesale millinery and hats are quiet, but manufacturers of artificial flowers are doing well. In furs many advance orders have been received, and prices are high and firm. Business in wholesale men's furnishings continues in large proportion, and manufacturers of shirts, gloves and neckwear have obtained some good early orders. Fall prospects for an active business in hosiery and underwear are considered promising. Wholesale grocers report trade fitful and not entirely satisfactory. Prices are firm, but buyers of most lines are cautious. Butter is in good demand, but, though receipts are light, prices are unsteady. Supplies of eggs are not equal to the demand, and prices continue high. Peach arrivals are large, but condition is poor. The wholesale flour trade is fairly active, but prices are firm and millers exact full quotations. Manufacturers of domestic automobiles are busy turning out machines to order, and importations have fallen off. Pig iron is slightly more active. Structural steel is being bought freely, and collections in these lines are fairly good. Reduced prices of copper have not produced anticipated orders, and a further reduction is looked for. Manufacturers of machinery are transacting a good business, and a fair volume of trade has been done in electrical supplies, but collections have been poor. In the furniture trade collections have improved and business all around is fairly good.

Linseed oil is dull, consumption is low, and manufacturing consumers have all they want for present needs. Leaf tobacco continues quiet; old stocks are light; Sumatras and Havanas are in very good demand. In drugs and chemicals business is fairly satisfactory. There is less demand for paper, but prices are steady and collections fair to good. The real-estate market has been quiet, very little new work being done in the building line.

The following telegrams show trade conditions at the cities mentioned for the week ending August 2:

BOSTON.—In seasonable dry goods an active business is still being done by jobbers. Demand has been large, especially for cotton fabrics, despite very high prices, and expectations of a large fall business generally prevail. There is, however, more conservatism shown in ordering far ahead from mills, at prices asked, and leading mill agents have advised customers against overbuying. Dress goods for fall are in active demand from manufacturers of garments. Men's furnishing goods at wholesale have been selling actively. The figures of shoe shipments are as follows: Last week, 98,558 cases; preceding week, 95,950; last year, 103,587; total for 1907, 2,830,462; total for 1906, 2,949,319; decrease, 118,857. Jobbers in paper report business seasonably quiet, sales being chiefly to supply pressing wants. Mills have a fair amount of orders on hand in many instances, but new business is limited in volume. Only a moderate midsummer volume of business is being transacted in paper stock. In lumber no marked change in prices is noticed, the demand being fair in most lines. Metals, particularly steel and iron, are fairly active and prices generally steady. Anthracite coal orders are plenty, retailers being busy on winter orders. Soft coal is quiet. Builders' supplies and paints and oils are in fair demand. The flour market is easier, with moderate reductions on some grades. The usual midsummer dullness is noted by grocery jobbers, collections being fair. Canned-goods brokers report large sales for fall delivery.

PROVIDENCE.—The paint and oil trade is active. Building materials generally are moving slowly. Cotton goods are firm in demand and price. Collections are fair.

PORTLAND, ME.—Prospects for fall in boots and shoes, millinery and fancy goods are very good. Trade throughout the state is a little better than last year at this time. Collections are good. Weather conditions are good for agriculturists.

NEW HAVEN.—Business is quiet and sales in practically every line show a decrease. Collections are slow.

PHILADELPHIA.—Domestic wools are firm and trading is light. Carpet wools are dull. Worsted spinners and weavers are apparently busy. Dry-goods jobbers report a good trade for fall from out-of-town customers. Local retail business is dull; collections are fair. Flour continues dull and unsatisfactory, millers endeavoring to maintain prices and jobbers and consumers claiming concessions. Chemicals and dyestuffs are inactive, a moderate volume of business being done, but prices remain firm. Paints and glass are moving freely and the market is strong and active. Lumber wholesalers report trade rather dull, while retailers are busy; prices are firm and prospects for future business good. Leather demand is of fair volume, with supply good and prices showing slight concessions where purchases are of moment. Hides and skins are dull, with quiet demand, full supply and prices slightly off, buyers not being in the market. Goatskins continue dull and weak on quiet demand and full supply. Shoe dealers report fair business. Tobacco requirements just now are not so heavy, and buyers hold off, except for small lots to be used immediately. They are using up their reserve stocks closer, and an early heavy fall trade is looked for. Zimmers are the most asked for, are scarce and held at 21 cents. Sumatra, though higher in price than last year, yields better, and is therefore cheaper. Seed leaf ranges from 20 to 22 cents; Havana Remedios, first capaduras, 72 to 75 cents in large lots. Liquor sales are few and small, as usual in midsummer, and general conditions are favorable. Dullness continues in iron, and there seems small probability of improvement in the near future, though inquiries during the week have, perhaps, been slightly more numerous. The recession in the price of pig has been $2 per ton or thereabouts, and a further reduction is looked for before buying to any considerable extent is probable, but at present there is a disposition to firmness, influenced by uncertainty respecting ore supplies. The volume of coal business is fair for the season, with prices generally steady and satisfactory. The use of gas in the manufacture of steel has occasioned increased demand for coal of good quality. Operators in the southern bituminous field, as well as many in the eastern district, have their product for the year about all sold, and higher prices for soft coal are predicted for the fall season.

PITTSBURGH.—The pig-iron market is stagnant and there have been no transactions of moment for some time, with but little inquiry for iron for delivery at any time. Present quotations are called nominal, and the present quiet conditions are likely to prevail until later in the year. It appears to be generally conceded that the price of pig iron is too high, and a change in prices may occur at the time mentioned, though furnacemen do not think there is much chance of a recession, everything considered. Coke is steady at present prices and there is a free movement. There is a small shortage of labor, usual at this season, which has reduced the output somewhat and has a tendency to stiffen prices. Quotations for pig iron at valley furnaces for immediate delivery are nominally as follows: Standard Bessemer, $23; chilled basic, $22; No 2 foundry, $23.50, and gray forge, $22.35. Standard Connellsville furnace coke is quoted at $2.50 to $2.60, and foundry coke at $3 25 to $3.50.

BUFFALO.—Aside from a seasonable quietness in certain lines, reports from local jobbing and wholesale houses are favorable. Demand remains steady and collections are reported to be satisfactory. Retail trade in summer goods is active.

BALTIMORE.—Seasonable dullness prevails at wholesale, but favorable weather conditions have assisted retailers in moving stocks, and a fair busness is reported. Clearing sales continue. The outlook for fall business is encouraging, and a decided increase in business is anticipated. Jobbers of dry goods report a scarcity of brown goods, also of prints. Desirable fabrics in general are scarce. Prices are firm, with an upward trend. Department stores have had a fair business. Collections continue slow, and less discounting is being done by retailers than heretofore. A fair business is being done in immediate orders for shoes, with fall orders fully up to 1906. The stock of tans is very light, with increasing demands. Road orders for crockery are ahead of last year. Prices are firm and advances are expected. Trade in paper fairly active, but collections are slow. Maryland leaf-tobacco receipts are very light, owing to farmers being busy with the new crop; prices are firm. Ohio leaf is in fair demand for all grades, with receipts falling off gradually. Manufacturers of shirts report a very good spring order business, and some firms have sold their entire output. Overall manufacturers report dealers buying cautiously, due to increased prices. Mercantile deposits and balances show a decided falling off for July. Local banks are fully loaned up, with increased demands from depositors and out of town.

CINCINNATI.—Retail stores have held clearance sales during the past three weeks and a good volume of trade is reported. Jobbers of clothing say business is slow, while notions and dry goods are fairly active. Building trades have experienced a busy summer. Steel, iron, brick and hardware lines are doing well, with enough work and contracts on hand to keep going until late in the fall. Groceries are active. Whiskey is firm. Collections generally are good. Country merchants report trade fair.

CHICAGO.—Increased sales are reported in a few lines, especially in dry goods, and with better crop prospects there is more disposition to buy goods than existed thirty days ago. Retailers are not carrying heavy stocks and are beginning to stock up. Shipments of fall goods are increasing. Shoes and leather goods have a fair sale, and clothing men are doing about the usual amount of business. Pig iron is meeting with increased inquiry, and sales have enlarged. Steel rails are selling better, orders for 50,000 tons being placed here by western roads. Structural material is selling well and there is a large business in sight. Prices for bituminous coal are stronger, with some sales at 25 cents advance. Lumbermen report slightly larger sales, although there is easiness in prices of hemlock and yellow pine. Groceries are having a fair sale, with consumption about normal. Butter has declined, but eggs, poultry and potatoes advanced. Hogs are lower, while cattle and sheep are higher. Receipts of cattle decreased; those of hogs and sheep increased. Money is firm, demand good, and banks are closely loaned up. Eastern paper is offered freely at 5½ to 6 per cent. Collections are better, although not above normal.

LOUISVILLE.—Business in all manufacturing and wholesale lines is quiet. Boot and shoe dealers report small sizing-up orders for seasonable goods. Dry goods are fairly active, principally for fall. The grocery and drug trades report an active business. Demand for hardware is only fair. Clothing manufacturers report fall business practically over, and they are busy making and shipping goods. The whiskey market continues strong. Usually during the summer it has been the case that prices drop, but this year they are holding firmly at the increased quotations. Retail trade in all lines is good. Collections are reported considerably improved.

INDIANAPOLIS.—Dry-goods houses are doing a good business. Wholesale grocers are collecting country accounts with success.

ST. LOUIS.—Jobbers in dry goods, shoes, notions and kindred lines are still busy with advance orders. A few buyers are in the market, and orders placed by them have been liberal. Hats and gloves show an increase over last year. House trade in all lines is expected to be very active within the next week. In millinery many large orders have already been placed. Manufacturers of clothing are now booking a number of good orders for immediate shipment, the demand being for a better grade than heretofore. Prices are firm and well maintained. Manufacturers of stoves are very busy. Orders now on hand equal previous years, and with the season just opening business bids fair to exceed all former records. Manufacturers of overalls are behind with orders for early shipment, owing to the scarcity of experienced operators. Groceries, drugs, paints and oils show a decided improvement at firm prices. Clearance sales continue among department stores, which have had a tendency to greatly reduce stocks of summer goods. On the whole the outlook for the year is very encouraging. Money is steady at 6 per cent., and demand is good.

KANSAS CITY.—Business in all leading wholesale lines has been uniformly good. Jobbers in dry goods report unprecedented gains in July. Retail business is active and collections range from fair to good.

MILWAUKEE.—Trade conditions are reasonably satisfactory for the season. Collections are fair.

SIOUX CITY.—Business is active in all lines. Collections are good.

DAVENPORT.—Trade, retail and wholesale, equals that of this time last year.

ST. PAUL.—Business is active. Few cancellations are attributed to the crop outlook, although many are received from the Mesaba range, where a strike is on. Collections were quite good in July. The railroads are in good shape to handle crops, which will allow farmers to be paid in bulk, thereby benefiting the merchant and jobber. In Minnesota creamery interests are prospering greatly.

MINNEAPOLIS.—Jobbers of dry goods, shoes, hats, notions, drugs, clothing, groceries and hardware report excellent autumn sales, with shipments equally satisfactory. Other lines are quiet, though they are not complaining. Collections are excellent for the season. The flour output is less than last week, but buyers are said to show more interest, and prospects are more encouraging. Lumber trade is brisk.

OMAHA.—Collections are fair.

LINCOLN.—Business is fair to good and collections are fair..

CHARLESTON.—Wholesale dealers are exceedingly busy shipping fall orders and report trade very good. Collections are slow.

RICHMOND.—Manufacturers of and wholesale dealers in shoes and rubber goods are active, and sales show an increase over last year's. Dealers continue to extend their territory farther into the west and south with encouraging results. Lumber continues to show a decline in price. The metal market is not so active as it was earlier in the year; orders for some lines show a falling off. Demand for money is active. Retail trade shows a falling off. Collections are fair.

AUGUSTA.—Trade continues fair.

ATLANTA.—Trade in wholesale lines continues active. A total prohibition bill has been passed by the legislature and becomes effective January 1, next. Opinions differ as to the effect the bill will have on business, but the general view is that if any damage results from the same it will be only until business affairs can be readjusted to meet the changed conditions. Several contracts have recently been let for large store buildings and costly residences.

MACON.—Trade is dull and collections are slow.

JACKSONVILLE—Trade reflects the usual summer dullness, and collections are slow. Building continues active and real estate is firm.

BIRMINGHAM.—Iron prices are steady and inquiries are more brisk. Other lines of business show an increase. Collections are from fair to good.

MOBILE.—Jobbers report doing a good volume of business, but collections are slow, which is usual at this season. Lumber remains exceedingly quiet. Building is fairly active. Real estate owners will raise rents 10 per cent. after November 1. Plans recently completed for a new paving venture call for an expenditure of over $200,000.

MONTGOMERY.—Trade conditions are fairly satisfactory. Collections continue slow.

CHATTANOOGA.—Trade conditions are fair. Collections are about the average.

MEMPHIS.—Collections are slow.

NASHVILLE.—Local markets are in excellent shape considering the season, and there is a comparatively lively movement of all commodities, particularly staples and seasonable produce.

LITTLE ROCK.—Midsummer trade is unusually good, owing to favorable weather and conservatism in spring buying. Collections are improving.

NEW ORLEANS.—Retail trade is showing some dullness as midsummer approaches and jobbing business is correspondingly quiet, but there is a feeling of confidence that business will be good in the fall, as present conditions are healthy.

DALLAS.—Collections are slow.

WACO.—Jobbers report a satisfactory business. Collections continue slow.

SAN FRANCISCO.—The regeneration of the municipal government is progressing rapidly and influencing the commencement of many delayed projects of importance. Business is somewhat better with collections still backward.

SEATTLE.—Trade conditions show a marked improvement. The demand for merchandise from Alaska has been fairly good. Collections, however, are still slow.

SPOKANE.—Building operations are active. General trade is good. Collections are fair.

TACOMA.—Lumber is quiet and other lines are running better than a year ago.

PORTLAND, ORE.—General trade is good and collections are satisfactory.

FINANCIAL.

Money Market.

By the operations between the Treasury and the New York banks the latter lost over $3,000,000 for the week. They gained from the interior, but, including the shipment of $500,000 gold to Paris and further withdrawals for Canadian account, the estimated decrease in cash holdings amounted to about $2,300,000. The loan market throughout the week continued to be easy so far as call money was concerned, the supply being ample and the prevalent rate for renewals around 2½@3 per cent. On the other hand, time money was slightly firmer. The offerings were on the whole fair in quantity, but lenders would not consider any rate less than 6 per cent. for six to seven months' arrangements and ninety-day loans were held at 5½ per cent. A considerable amount of business was reported at such figures, and the prevalent sentiment in the market is that relatively high rates must be expected for the balance of the season. The unsettled foreign financial position and the apparent unwillingness of the European markets to discount American finance bills is much commented on. Toward the close of the week it would seem that some foreign loans were put out in the New York market, the amount being sufficient to bring foreign exchange below the gold export rate. Commercial paper was extremely dull, with 6 per cent. quoted for double names, the only buying being of a scattered sort coming from interior banks and institutions.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending August 1 shows an aggregate of $2,510,191,000, as against $2,511,612,000 last week and $2,710,000,000 in the corresponding week last year. Canadian clearings for the week aggregate $74,419,000, as against $82,168,000 last week and $72,970,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	August 1	*Inc.*	*Dec.*	*July 25*
New York	$1,508,716,000	....	13.8	$1,480,729,000
Chicago	223,427,000	5.5	....	228,713,000
Boston	138,707,000	1.1	....	149,076,000

New York Banks.

Last Saturday's bank statement had only one important feature—the increase in the average loans of nearly $18,000,000. This was due apparently to the comparative cheapness of call money and the substitution of such borrowings for maturing time loans, while the call on the Union Pacific bond syndicate for part of its members' participation also had some effect in the same direction. The increase of $5,866,000 in the cash averages was in accordance with what was known as to the actual movement of money during the week, and the gain of $22,781,000 in deposits, while it did not agree with the changes in loans and cash by about $1,000,000, was sufficiently close to the alterations in those items under the system of averages. The reserve required, however, was $5,695,400 larger, and the surplus reserve consequently increased only $170,600, so that the statement, on the whole, was a nominal one. The figures of the statement compare as follows with those of the preceding week:

	July 27	*July 20*	*Changes*
Loans	$1,123,163,700	$1,105,250,000	I. $17,913,700
Specie	210,451,500	204,768,300	I. 5,683,200
Legal tenders	72,750,400	72,567,600	I. 182,800
Deposits	*1,095,772,900	1,072,991,300	I. 22,781,600
Circulation	50,293,900	50,382,300	D. 88,400
Total reserve	283,201,900	277,335,900	I. 5,866,000
Reserve required	273,043,225	268,247,825	I. 5,695,400
Surplus reserve	9,258,675	9,088,075	I. 170,600

The following shows the relation between the respective dates:

	July 27, 1907	*July 28, 1906*	*July 29, 1905*
Loans	$1,123,163,700	$1,058,415,100	$1,144,847,400

Foreign Exchange.

The exchange market was irregular in its movements this week. It began with a display of decided strength, demand sterling rising to 4.87.25 on Monday, on which day $500,000 gold was engaged for shipment to Paris. The situation abroad was also disturbed owing to the Egyptian financial complications, and it was stated that London was decidedly averse to taking American loan bills at present. The lack of such drawings was plainly seen in the New York market, and the inquiry for remittances was quite brisk. While rates continued firm there were no further gold engagements, the strength of money operating as a check on such arrangements. By Wednesday the market began to weaken, there being a better supply of bills and a decrease of inquiry. Some of the indications would point to renewed selling of finance bills by houses identified with various bond syndicates. The market consequently sold off rather sharply, the demand rate going to 4.86.80 on Thursday, with a further drop to 4.86.70 on Friday, on free offerings of bankers' bills.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

July 27	*July 29*	*July 30*	*July 31*	*Aug. 1*	*Aug. 2*
4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84½ @ 4.88	4.84 @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87.10 @ 4.87.15	4.87.10 @ 4.87.25	4.87.20 @ 4.87.30	4.87.00 @ 4.87.20	4.86.80 @ 4.87.00	4.86.65 @ 4.86.80

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.84.00 @ 4.84.10	4.84.05 @ 4.84.15	4.84.30 @ 4.84.45	4.83.75 @ 4.83.90	4.83.50 @ 4.83.85	4.83.40 @ 4.83.50

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.25 @ 4.87.35; commercial bills, 4.82¾ @ 4.83½; francs, 5.20@5.17 less 1-64; reichsmarks, 94⅜ @ 95⅛.

The Bank of England's discount rate is unchanged at 4 per cent. The bank this week showed a loss of £610,000 in gold, and its reserve was given as 46.74 per cent. of the liability, against 47.16 per cent. the week before. In the London open market call money is 2½ @ 3 per cent. and discount 3⅝ @ 3¾ per cent. The Bank of France this week showed a decrease of 10,475,000 francs in gold, but increased its loans by 147,900,000 francs. Its discount rate remains at 3½ per cent., the Paris market quotation being 3¼ per cent. At Berlin the bank rate is 5½ per cent. and the market 4¼.

New York Securities Market.

Activity in the stock market fell off more or less during the past week. Moreover, this was accompanied by a perceptible reassertion of bearish feeling on the part of Wall street interests. In fact, the bullish sentiment which made its appearance coincidently with predictions of a further increase in the dividend rate on Southern Pacific seems to have partially died away. The Harriman stocks, it is true, were the objects of some additional bullish manipulation in the early part of the week, but when the actual announcement came on Thursday that the Southern Pacific dividend had been increased, weakness developed, the support which had been extended to the stocks in question being apparently withdrawn. The quarterly report of the United States Steel Corporation showing record-breaking earnings practically fell flat, the effect on the Steel stocks being of the slightest kind. This was not due to any disappointment over the failure of the directors to increase the dividend on the common stock. It had been fully expected that there would be no change, and what seemed to influence the market chiefly in connection with the Steel statement was the additional announcement that since July 1 there has been a marked falling off in the volume of new orders received. A circumstance which contributed more or less to weaken the market was a further lowering of speculative copper prices, which was held to indicate that further considerable concessions will be made in the price of the metal by the large producers before they can count upon receiving any considerable volume of orders. This naturally caused a selling movement in Amalgamated, and other copper mining stocks were heavy. Not a little discussion was heard throughout the street in regard to the complications growing out of the North Carolina passenger rate law and the surrender by the Southern Railway and others to the state authorities, this being reflected by the very heavy tone of Southern Railway stocks. Another and perhaps the most effective factor in the market was the tendency of time money to become somewhat harder. This was believed to be due in a considerable degree to the unsettled financial situation abroad and the unwillingness which London and the other financial markets display in regard to putting out money at New York, as they are accustomed to do at this season in most years. A shipment of $500,000 in gold was made to Paris early in the week, but exchange weakened later on and further transfers of the same kind were averted. On the other hand, it is pointed out that the strain at both Paris and London has not been relieved and that they are quite likely to take more gold from this country. Under these combined influences the market, as already stated, became narrow and remained so during most of the week, with augmented activity on the part of the bearish operators. The latter, however, by covering from time to time, caused moderate rallies and prevented the declines from being in any way severe ones, and on Friday the market again developed a certain amount of strength, being helped by a continued decline in exchange and the offering of foreign loan bills with greater freedom.

Boston Stock Market.

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
August 1	2,739,836	2,895,020	1,041,696
Largest exports in 1907, week ending June 6			5,263,138
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending July 25, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	579,023	214,571	55,170
London	273,196	68,744	22,204
Bristol	32,000	....	700
Glasgow	114,472	68,471	23,673

All other	....	89,066	3,451
Total	1,529,619	1,674,058	222,551

Exports of oats amounted to 409,460 bushels, of barley to 57,648 bushels, and of rye to 18,000 bushels.

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with July 27 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
July 27, 1907	341,583	4,238,927	2,503,967	2,034,765
July 20, 1907	322,735	3,586,661	2,952,656	2,087,118
July 28, 1906	466,317	8,460,599	2,631,029	2,693,748
July 29, 1905	348,265	7,285,068	3,207,701	4,021,330
Season				
July 1, 1907, to July 27, 1907	1,265,327	14,293,226	12,321,288	8,245,878
July 1, 1906, to July 28, 1906	1,504,607	22,219,719	12,429,802	12,310,507
July 1, 1905, to July 29, 1905	1,247,274	17,624,514	14,171,926	11,893,439

Grain on Passage.

To	*Wheat and flour*	*Corn, bush.*
United Kingdom	20,320,000	8,500,000
Continent	10,080,000	13,770,000
Total week ending July 25	30,400,000	22,270,000
Preceding week	32,000,000	22,142,000
Corresponding week 1906	28,000,000	20,783,000

Statistical Situation of Cotton.

The aggregate world's visible supply of American and other cotton last week, as made up by the New Orleans Cotton Exchange, is shown, with comparisons:

Week ending	*July* 26, 1907	*July* 19, 1907	*July* 27, 1906
American	1,789,526	1,867,675	1,287,955
Other kinds	1,172,000	1,233,000	1,107,000
Total	2,961,526	3,100,675	2,394,955

Of the world's visible supply, as above, there were afloat for or held in various countries on the dates given the following quantities:

	July 26, 1907	*July* 19, 1907	*July* 27, 1906
Great Britain and continent	1,791,000	1,883,000	1,211,000
Egypt	52,000	58,000	47,000
India	697,000	719,000	749,000
United States	421,000	441,000	388,000
Total	2,961,000	3,101,000	2,395,000

World's Wheat and Corn Shipments.

WHEAT—BUSHELS.

	July 25, 1907	*July* 18, 1907	*July* 26, 1906
United States and Canada	2,376,000	2,211,000	1,709,000

Total	7,215,000	8,177,000	5,623,000

Wool Markets.

The wool-growing districts have been cleaned up of the new clip at an unusually early date this year and interest is now centered in the east, where new wools, especially Oregon and Montana grades, are arriving very slowly. Manufacturers are taking new wools almost as fast as they are opened, and since the dealers were able to secure similar grades at lower prices than the heavy purchases of the manufacturers were made at, there is a very much stronger and better feeling in the market, with greatly increased activity. Demand is still largely for fine staple fleece and territory wools grading three-eighths blood or above, practically wools suitable for making worsteds. There is also a good demand for high grade fine clothing territory wool. The tendency of prices is strongly upward, and many of the grades most in demand have been advanced during the past few days. Among the sales of the week have been fine Idaho, in the original bags, at 24 cents, staple Idaho at 25 cents, half blood Idaho at 25@26 cents; Utah and Wyoming fine and fine medium at 23½@24 cents; Arizona fine and fine medium at 23 cents; Montana half and three-eighths blood, in the original bags, at 26@26½ cents; staple Oregon at 23@24 cents, Oregon clothing at 20@21 cents; eight months' Texas at 23@24 cents, twelve months' at 27 cents, delaine fleece at 39½ cents; half blood fleece at 34@34½ cents for Ohio and 32½@33½ cents for Michigan; unwashed delaine fleece at 32@32½ cents, No. 1 washed at 40@41 cents; 60,000 pounds quarter blood clothing at 27½ cents; Ohio quarters at 31 cents; Michigan quarters at 30 cents; baled California at 70 cents for fine and 65@66 cents for fine medium; scoured territory at 68@72 cents for fine and 66@68 cents for fine medium, and pulled B super at 45@46 cents. The last sale in the country was in eastern Montana at 24 cents, which is considered high. The new Montana wools are much lighter than last year, and in staple and strength are about up to expectation. Foreign wools are quiet, though there is a good demand for Australian 60s to 64s. A sale is reported of Australian 46s at 58 cents scoured and of Adelaide wool at 40 cents. South American wools are neglected on account of low quality.

HAWKS AND OWLS.

A pamphlet issued by the Department of Agriculture, Biological Survey, protests against the deep-rooted hatred displayed by farmers and sportsmen against hawks and owls. It is pointed out that only a few species of hawks and owls attack poultry, and that the vast majority of these birds are really friends of the farmer, in that they search for voracious rodents which destroy alike grain, produce, young trees and eggs of birds. The birds of prey, the majority of which labor day and night to destroy the enemies of the husbandman, are persecuted unceasingly, while that most destructive mammal, the house cat, is petted and fed and securely sheltered to spread destruction among the feathered tribe. The difference between the two can be summed up in a few words—only three or four birds of prey hunt birds when they can procure rodents for food, while the cat seldom touches mice if she can procure birds or young poultry. A cat has been known to kill twenty young chickens in a day, which is more than most raptorial birds destroy in a lifetime.

The rapacious birds breed slowly, rearing only one brood a year, though if the first set of eggs is destroyed another will be laid. The young grow slowly and need a relatively large amount of food. To satisfy their hunger requires constant foraging on the part of the parents, and the strain of rearing the family is probably twice that of any of the other land birds. Even the adults are large eaters, gorging to the utmost when the opportunity presents; and as digestion is very rapid and assimilation perfect, a great quantity of food in relation to the body weight is consumed every day.

Hawks and owls are complementary to each other. While hawks hunt by day and keep diurnal mammals in check, owls, whose eyesight is keenest during twilight and before dawn, capture nocturnal species. Again, owls are less migratory than hawks, and during the long winter they remain in the land of ice and snow to wage incessant warfare against the enemies of the orchard, garden and harvest field.

Although much may be learned by observing the food habits of live birds, the only way to determine the full range and relative percentages of the food elements is by examination of the stomach contents. A moderately complete and reliable index to the food of some birds of prey can be obtained by examining the "pellets." Hawks and owls often swallow their smaller victims entire, and tear the larger ones into several pieces, swallowing each fragment as it is detached. After the nutritious portion of the food has been absorbed, the indigestible parts, such as hair, feathers, scales, bones and other hard parts, are rolled into a solid ball by the action of the muscles of the stomach. These masses, known as "pellets," are regurgitated before fresh food is taken. The pellets contain everything necessary to identify the food, and in the case of some of the owls which have regular roosting places the pellets that collect underneath give an almost perfect record of the results of their hunting.

It is the object of the present paper to review briefly the food habits of the principal birds of prey of the United States, so that those interested may be able to distinguish between friends and foes, and thus be spared the necessity of indiscriminate slaughter.

Hawks and owls may be divided arbitrarily into four classes, according to their beneficial and harmful qualities:

1. Species wholly beneficial.
2. Those chiefly beneficial.
3. Those in which beneficial and harmful qualities about balance.
4. Harmful species.

It should be stated that several birds of prey belong to one or another class according to locality. A hawk or owl may be locally injurious because at that place mice, squirrels, insects and other noxious animals are scarce, and consequently the bird is driven to feed on things of more or less value to man, while in other regions where its natural food abounds it does absolutely no harm. A good example of this kind is given under the head of the great horned owl.

To the wholly beneficial class belong the large, rough-legged hawk, its near relative, the squirrel hawk or ferruginous rough leg, and the four kites—the white-tailed kite, Mississippi kite, swallow-tailed kite and everglade kite.

The chiefly beneficial class contains a majority of our hawks and owls, and includes the following kinds: Marsh hawk, Harris hawk, red-tailed hawk, red-shouldered hawk, short-tailed hawk, white-tailed hawk, Swainson hawk, short-winged hawk, broad-winged hawk, Mexican black hawk, Mexican goshawk, sparrow hawk, Audubon caracara, barn owl, long-eared owl, short-eared owl, great gray owl, barred owl, western owl, Richardson owl, Acadian owl, screech owl, flammulated screech owl, snowy owl, hawk owl, burrowing owl, pygmy owl, ferruginous pygmy owl and elf owl.

The class in which the harmful and beneficial qualities balance includes the golden eagle, bald eagle, pigeon hawk, Richardson hawk, Aplomado falcon, prairie falcon and great horned owl.

The harmful class comprises the gyrfalcons, duck hawk, sharp-shinned hawk, Cooper hawk and goshawk.

With the exception of the destructive Cooper hawk, sharp-shinned hawk and great horned owl—species which all farmers and sportsmen should learn to distinguish—we may safely say that the rapacious birds are among the most, if not the most, valuable birds that wage war against the foes of the agriculturist.

OPEN DOOR IN MANCHURIA.

The State Department is advised in a dispatch from the United States legation in Peking that the custom houses at Antung and Tatung-Kou, on the Chinese-Korean frontier, and at Dalny, within the Japanese leased territory, are now in operation, the latter since July 1. The dispatch gives assurances that the Chinese imperial maritime custom houses are about to be opened on the Chinese-Russian frontier.

These changes are regarded by the State Department as practical steps toward the restoration of the "open door" in Manchuria, in which the United States is deeply interested, and officials declare that this news should be encouraging and gratifying to American merchants. The agreement as to Dalny was signed at Peking on May 30 last by the Japanese minister at that capital, Gonsuke Hayashi, and Sir Robert Hart, the Englishman who has been in charge of Chinese customs affairs many years and is now inspector-general of the Chinese imperial maritime customs.

This agreement provides for the establishment of a maritime customs office at Dalny and steam navigation rules for Dalny and the leased territory in the Liao tung peninsula. The establishment of a maritime customs office at Dalny is stipulated in the agreement, which is practically identical with the agreement signed by the German minister and the inspector-general of Chinese customs on April 17, 1899, for the leased territory in the German sphere of influence at Kiao-chau. It is to be revised in the spring of 1908, when local conditions and needs are more fully understood.

The agreement for the opening of the Dalny trade, signed by Hayashi and Sir Robert Hart, provides that the chief of the maritime customs office at Darien "is to be of Japanese nationality," and that the members of the foreign staff of that office must be of Japanese nationality. Sir Robert Hart is to come to an understanding with the Japanese legation at Peking in the appointment of new chiefs. Then Sir Robert Hart must, according to the agreement, inform the governor-general of Japanese leased territory beforehand about any change in the commissioner or chief of customs at Darien.

All correspondence between the Darien customs officials and the Japanese authorities and merchants is to be conducted in the Japanese language, but should merchants of other nationalities reside in Darien they shall be at liberty to correspond in the English language. Correspondence in the Chinese language will likewise be permitted.

The important feature of the agreement is the section providing "that on merchandise brought by sea to Darien no import duty shall be levied," and that "import duty according to existing treaties shall be levied by the maritime customs office on all merchandise passing the frontier of the Japanese leased territory into the interior of China."

The Japanese authorities have agreed to take "suitable" measures to assist, as far as possible, in the prevention of merchandise passing the frontier of the Japanese leased territory when not provided with a permit or pass.

When Chinese merchandise brought from the interior of China into the Japanese leased territory at Darien is shipped from that port to other places it is to pay the export duty according to existing treaties, but produce raised in and manufactures from produce raised in or imported by sea into Japanese leased territory is not to pay any export duty. The duties to be paid by articles made in Japanese leased territory from material brought there from the Chinese interior are to be the same as those in the German leased territory of Kiao-chau. Chinese products brought from Chinese treaty ports to Darien are to pay no duty as long as they remain inside Japanese leased territory, but must pay duty according to existing treaties when shipped past the Japanese frontier.

Chinese merchandise shipped from Darien and having paid export duty shall be given a receipt, the agreement says, which, when presented at a Chinese treaty port, will provide for the payment of a coast trade duty according to existing treaties.

COAL EXHAUSTION REMOTE.

Officials of the United States Geological Survey have recently been cited in the press as authorities for sensational items predicting the early exhaustion of our fuel supplies. In the hope that erroneous impressions derived from these somewhat misleading articles may be corrected, Dr. George Otis Smith, the director of the survey, has given out an authoritative statement prepared by M. R. Campbell, in charge of the economic geology of fuels, and E. W. Parker, coal-mining expert and statistician. The articles as originally published represented the judgment of the survey's experts, but the trouble has arisen from incomplete quotations made from them, which have omitted essential qualifying statements. These quotations have been quoted in modified form until nearly all semblance of the original has disappeared.

The statement referred to is as follows: "The survey's experts wish to emphasize the fact that the uncertainty in predicting for the future rests upon many unknown factors, chief among which is the future rate of increase in consumption. During the last fifty years production has increased enormously, the output for each decade being nearly double that of the preceding one, and if this rate of increase were to continue uninterruptedly we might look for an exhaustion of the bituminous coal supply early in the twenty-first century. Against this, however, must be set a number of counteracting influences. Improvements in mining methods are increasing the amount of coal recovered, and improved methods of consumption are increasing its efficiency as fuel. As the most accessible coal becomes exhausted and the deeper and more expensively mined beds have to be worked, the higher cost will necessitate further increased economy in mining methods and greater efficiency in utilization.

"The facts are that an estimate of our bituminous coal fields, prepared with much care by Mr. Campbell, shows that the total quantity of coal stored in the ground was about 2,200,000,000,000 short tons. From this supply there have been extracted, according to Mr. Parker's figures, to the close of 1906, about 4,625,000,000 short tons, and, estimating a recovery of 66⅔ per cent.—or, in other words, assuming that for every ton of coal mined there is a half ton lost—this represents an exhaustion of nearly 7,000,000,000 tons, or only about one-third of 1 per cent. of the total supply. We produced and consumed in 1906 (in round numbers) 343,000,000 short tons, which represented, say, 500,000,000 tons of exhaustion, for our practice in this regard is improving with each year, and less coal is lost per ton mined than formerly. At this rate, if no increase were to be allowed for, the bituminous coal supply would last about 4,000 years. Taking into account, however, the probable rate, first, of increase, and, later, of decrease in production, Mr. Campbell and Mr. Parker are of the opinion that the bulk of the cheaply mined bituminous coal will be exhausted within 200 years; but when the period of decreasing production sets in, the need for fuel will, doubtless, be supplied in considerable degree by the utilization of other forces of nature, thus extending the life of the bituminous coal fields.

"So far as the anthracite region of Pennsylvania is concerned, predictions of exhaustion have been based mainly on estimates made by the Pennsylvania Geological Survey, which show that there were originally in the ground about 19,500,000,000 long tons of coal, and that for every ton of coal mined, one and a half tons were lost. This would mean that only 7,800,000,000 tons of the original supply were recoverable. To the close of 1906 the production has amounted to approximately 1,650,000,000 tons, which would leave 6,150,000,000 tons still available, and this, at the rate of production during the last four years (about 65,000,000 tons a year) would last about ninety years. Later estimates made by Mr. William Griffith, of Scranton, Pa., placed the quantity of minable coal in the ground at the close of 1895 at 5,073,786,750 long tons. Since then a little over 600,000,000 tons have been mined, leaving, say, 4,470,000,000 tons available, which, at the rate of 65,000,000 tons a year, would last about seventy years. But against both of these must be set the fact that production will not be maintained at the present rate until the coal is gone.

"The annual anthracite production has about reached its maximum. When it does begin to decrease the rate will probably be slow. Moreover, with improved mining methods and increased prices of coal, beds are now being worked which were not included in the available reserves when the estimates were prepared. In addition to this, the present practice is such that probably 60 per cent. is now recovered, instead of 40 per cent. under the old methods. This saving alone would extend the life of the region one-half.

"The utilization of small sizes of anthracite for steaming purposes, which has increased rapidly within the last few years, has not only reduced the waste in mining but is making possible the recovery of usable fuel from the great culm banks that have stood as unsightly monuments to the wasteful methods of former years.

"To what degree these factors will extend the life of the anthracite field it is not possible to say, but the conditions now existing indicate no danger of exhaustion during the present century. A conservative statement is that soon the annual production and consumption of anthracite will decrease gradually, so that the supply will probably last for 150 or 200 years."

ALCOHOL—AFTER SEPTEMBER.

Prof. Robert Kennedy Duncan contributes to *Harper's Magazine* for August a discussion of "The Problems of Industrial Alcohol." He closes with a reference to the patented processes of Simmonsen and Classen for converting cellulose into alcohol. If it can be accomplished according to the inventors' "claims," Professor Duncan predicts that in due time it may be possible to buy alcohol, unfit for beverages, at from 8 cents to 10 cents a gallon.

What effect would this retail cost have on manufactures and the arts? After September 1 American farmers will have the same privileges as German farmers for operating stills, tax free, in the production of denatured alcohol for light, heat and power. Industrial alcohol at 40 cents a gallon, in lamps equipped with the German incandescent burners, Professor Duncan says, would compete with kerosene at 18 cents a gallon, affording a peculiarly agreeable light for a longer time, an inoffensive odor, and perfect cleanliness with the least danger of catching fire. At 10 cents a gallon alcohol should drive petroleum out of the market.

Even at 30 cents a gallon, which Professor Duncan thinks may be its retail price within a year or so, alcohol can still compete with petroleum in its various forms as an illuminant and heating agent. Moreover, certain industries which now depend upon the highly taxed ethyl alcohol will expand considerably when the duty is lifted from the product. As a solvent and chemically active agent alcohol has labored under a tax of $2.08 a gallon. It cuts shellac, which "literally paints our civilization." Professor Duncan estimates a gain of tens of millions of dollars to industries which use this finisher, as in manufactures of furniture and all wood products.

But this is only one use in the many important industries, working under an aggregate capital of $500,000,000, and employing 300,000 workmen, whose operation must be vastly extended by the unrestricted removal of the tax.

THE TROUBLE IN EGYPT.

The London *Statist* of July 20 says: "Last week negotiations were going on for dealing with the embarrassments connected with the Egyptian crisis which had come to light in Manchester. The negotiations have since continued, and have proved less easy than was anticipated. It is understood that all that has yet been agreed upon is that time is to be given. No doubt it is hoped that as soon as the Egyptian cotton crop begins to be marketed there will be a revival of activity. Just now everybody who could get away from Egypt has got away. Even in ordinary years there is in July and August a marked slackening of business. This year, just after the crisis, it is natural that business should be at a standstill. But when the cotton crop begins to be marketed, not only will commercial business proper revive, but the absentees will also begin to return to Egypt. It is natural to expect, therefore, that with the revival of commercial activity and with the knowledge that the crops are good, the Bourse will revive also, and, therefore, that it will be possible to sell securities which now are unsalable.

"There is also a recrudescence of uneasiness about the state of affairs in Egypt itself. It is not feared that there will be any serious failures, but the speculation that was carried on was utterly reckless, and large numbers of persons contracted liabilities altogether beyond their means. As long as confidence continued there was a chance, of course, that these persons might be able to sell at a profit, and that, therefore, they might come out of the speculation very material gainers. But once confidence failed prices dropped heavily, and at present it is extremely difficult to sell at any quotation. Really good securities—such, for example, as the shares of the National Bank of Egypt and of the Agricultural Bank—of course, can be sold. Even in these, however, though their value is undoubted, there has been a heavy fall.

"Local securities which are not dealt in in Europe are not salable. The local people, for the moment, will buy nothing. Many of these securities, no doubt, prove to be good, but for the moment nobody will buy, and in consequence it is feared that many of the speculators, who have ventured altogether beyond their depths, may have to declare themselves insolvent. The losses will, of course, even if the fears are realized, be widely distributed, and, therefore, will not seriously affect any particular market. But the mere fear that there will be more failures is exercising an unfavorable influence upon the bourses and the stock exchanges.

"It will be understood that all the trouble has been caused by pure speculation in finance and on the Stock Exchange. People drew upon Europe for sums far beyond what they ought to have been allowed to draw. They then lent out the money, or they bought securities outright. In both cases the securities which they either bought or took over as cover have greatly depreciated. What is worse, even depreciated as they are, many of them cannot be sold. But this has not affected Egypt proper. The country is as prosperous as ever.

Indeed, it is no exaggeration to say that it is more prosperous than ever, for all the crops are good, and, particularly, the cotton crop is excellent. As the American cotton crop is not good the price is high.

"A private telegram received in this city this week from Cairo states that nearly a third of the whole crop has already been sold forward at exceedingly profitable prices. It is clear, therefore, that the wealth of Egypt itself is steadily increasing. And it is possible that, if time is given to the embarrassed speculators, the stock markets even may recover when the cotton crop begins to be marketed, and the whole trouble may subside."

OVER ROCKIES BY ELECTRICITY.

According to the Spokane *Spokesman-Review*, "electric power will be lifting freight across the Bitter Root divide and turning the wheels of a score of mills in northern Idaho in less than three years; thirty-five miles of rushing mountain river will be subdued and harnessed, and the railroad world will watch with interest the first practical test of the substitution of electricity for steam power by one of the big railroad systems of the country on one of its heaviest divisions. What Hill has been contemplating for several years, the Chicago, Milwaukee & St. Paul is now in the field making a practical reality—hauling trains over its mountain divisions, particularly through tunnels, by electricity. While electric power has not made the progress in supplanting steam that was predicted for it a few years ago, where the power is generated by combustion, yet reduction in the cost of generation when water power is available and the scarcity of fuel for steam purposes in the northwest have operated to cause the Milwaukee to attempt electrical power on its Bitter Root mountains division as far as Chatoclet, Idaho, possibly all the distance from Missoula to the coast.

"In the acquisition of available water-power sites in the northwest the swift water stretch of the St. Joe river has been overlooked until within the last few months. This is not strange when it is remembered that such a valuable property as Kettle falls, on the Columbia river, was not acquired by a power company until a little more than a year ago, and Albany falls, on the Pend d'Oreille, could have been bought for a song in the not distant past. Possibly the St. Joe has not appealed to power companies for the reason that while it is a swift-running stream there are no precipitous falls, and development necessitates dams and the consequent heavy expense. The character of the country along the river, most of which is rough, mountainous timber land, might also tend to retard the development of water-power resources. Until a few months ago, when the Idaho & Montana Power Company, a subsidiary company of the Chicago, Milwaukee & St. Paul, filed claims on several sites along the river between the head of navigation and North Fork, none of the power sites had been surveyed. Since then private parties have acquired some rights.

"Besides economy and the solution of the fuel problem, which has been a thorn in the side of all the railroads in the northwest during the last two years, the Chicago, Milwaukee & St. Paul is following the lead of other railroads in using electric power for operating its trains through tunnels. The stretch of the line between the Bitter Root and Rock Lake, Wash., is one of recurring tunnels. As the survey now stands there will be fourteen tunnels on about 150 miles of line, and the aggregate of these tunnels will be 10,000 feet, ranging in length from the 4,000-foot tunnel in Lost Pass to the numerous small bores through projecting cliffs not more than fifty feet long.

"Following as the line does the very brink of the St. Joe river for nearly 100 miles, it would have been strange had no attempt been made to put all the useless energy wasting itself lashing rock-ribbed banks or tumbling over riffles, to practical use in behalf of the railroad. The possibilities were early seen by the officials of the railroad, who had an investigation made by their engineers, who reported adversely.

"The value of the river on the swift water division will be apparent when it is known that theoretically 200,000 horse power can be developed between North Fork and St. Joe, a distance of thirty-five miles. How much of this will be developed has probably not been decided by the railroad company, but it is reported that dams will be built as closely together as possible and that practically every available cubic foot in the river will be harnessed. As cost of development in this river is about $50 a horse power, something like $9,000,000 will have to be expended to fully develop the river."

Remington Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 10, 1907.

After nearly a week of a condition of strain brought about by the revocation of the Southern Railway Company's license to do business in the state of Alabama, an agreement was suddenly reached on Thursday between the state officials and the representatives of the railroad. As the result of this settlement the license of the railway company will be restored, while it and its allied lines will put into effect, beginning September 1, the 2½-cent passenger rate and a schedule reducing rates on 110 commodities of general use in the state. The railroad has secured a modification of the order made by Judge Jones some time ago restraining the state officials from enforcing the laws in question. It is understood, however, that their continued operation will be subject to judicial determination as to their constitutionality and reasonableness.

While the epidemic of attacks on railroad corporations in various southern states is apparently being checked by compromises and agreements, the serious harm recent rate legislation and administrative action growing out of it might do to the business interests of that section has attracted widespread attention. The great expansion of southern industries of all kinds—agricultural, mining and manufacturing—though attended by a marked growth of its railroad systems, has nevertheless left the transportation facilities of that part of the country far in the rear. One of the most pressing necessities of the southern states is that their railways should be completely modernized with all speed and thus be placed in condition to handle traffic safely, promptly and economically. The double-tracking of the trunk lines extending southward from the Potomac and Ohio within the next few years is regarded by many competent authorities as absolutely essential, while the construction of new branches and feeders of the existing roads, as well as of short independent lines to open up new territory, is equally necessary.

In short, there is a field in the south which calls loudly for the expenditure of an enormous amount of fresh capital upon such work. Only recently has the credit of the principal southern companies become established upon such a basis that their securities could command the confidence on the part of investors in the United States and Europe, which would enable their managements to raise the capital so urgently required to let them enlarge their facilities and equipment and make an advance in the direction of providing adequate service. The attacks on the roads which have been seen in North Carolina, Alabama and Arkansas, with the threat of similar proceedings in other southern states, have already had their natural effect upon the sentiment of investors. For any of the large southern systems at present to place a bond or stock issue with which to build double tracks, buy additional equipment or otherwise add to its efficiency, would be almost an impossibility. Leaving aside any question as to the justification for charges of unduly high rates, discrimination or other evils which require remedies, the recent wholesale onslaughts on such interests are of a nature to hamper the development of the south's railways on a scale commensurate with the growth of its business and the proper exploitation of its many latent natural resources.

While showing a better probable outturn of some crops than was indicated a month ago, the August 1 report of the Department of Agriculture is rather disappointing, in that the gains are comparatively slight and certainly smaller than were expected, considering the known good character of the weather in July. Most disappointment will probably be evoked by the small gain shown in corn and the heavy loss in spring wheat, which has almost neutralized the gain shown in the yield of the winter-sown article. The corn condition on August 1 is given by the government at 82.8, as against 80.2 on July 1, and 88.1 on August 1 a year ago. The spring-wheat condition is given at 79.4, as against 87.2 on July 1, and 86.9 on August 1 a year ago. This latter large decline was, it might be observed, heavier than might have been expected, considering the almost general impression that spring wheat had improved. The oats condition figures of 75.6, as against 81 on July 1, and 82.8 on August 1 a year ago, were about what were looked for. The condition of barley is placed at 84.5, as against 84.4 on July 1. A quantitative rendering of the wheat and corn condition figures results in a fairly good gain over the crop indicated a month earlier. Thus the winter-wheat yield per acre worked out points to 409,500,000 bushels, as against an estimate of 382,600,000 on July 1, while the spring-wheat yield is estimated at 228,850,000 bushels, as against 251,899,000 bushels on July 1, a gain of nearly 27,000,000 bushels in the winter-wheat crop, but a loss of 23,000,000 bushels in spring wheat, thus pointing to a total wheat crop of 638,350,000 bushels, as against 634,494,000 bushels indicated on July 1, comparing with a total actual yield last year of 735,260,000 bushels and with the record crop of 748,460,218 in 1901. A shortage of 97,000,000 bushels from 1906 and of 110,000,000 bushels from the record yield is here indicated. The corn crop promises 2,648,650,000 bushels, as against 2,560,000,000 bushels indicated on July 1, and an actual yield last year of 2,927,416,000 bushels. Oats promise 910,000,000 bushels, against 964,904,522 bushels last year and the record yield of 987,842,704 bushels in 1902. There is here shown a probable loss in the three cereal crops from a year ago of 430,000,000 bushels, or about 9 per cent.

Reports by the savings banks of New York to the Banking Department of the state, covering the year ending June 30, exhibit results calculated to attract attention. The returns indicate a healthy growth in the main. The number of depositors increased 103,573 over the preceding year, and the aggregate resources, which amounted to $1,490,760,675, represented an augmentation of $46,316,183. On the other hand, it is noted that the increase in the aggregate deposits was only about $5,000,000 for the year, and that the amount withdrawn by depositors was $389,508,985, or $32,598,764 more than in the year before. The total surplus of the institutions was $95,743,206 at the end of the fiscal year 1907, as compared with $108,671,735 a twelvemonth before, this shrinkage of $12,928,529 representing the decline in market values of the securities held.

All signs indicate that Canada is now passing through a period of very tight money. That condition, indeed, is the real dominating influence in trade at present. Stringency has existed for some time, due to the immense development of the country, particularly the west, which has been progressing at a tremendous rate for the past five years. Expenditures of money attendant upon the building of railroads and the general opening up of a new country, together with the demands made by the natural business expansion, have been very large. Furthermore, the crops of last year were heavy and their movement proved a serious problem; indeed, some of the western wheat crop still remains in the hands of farmers. This must be moved, and there is rapidly nearing harvest another crop, the volume of which is thought not likely to be far behind that of last season. That there has been much speculation in land for some years past also seems certain. Altogether, therefore, it does not seem reasonable to expect easier money for some time to come. There is no doubt that in some quarters this money stringency to some extent interferes with trade expansion that would otherwise take place. General trade in other respects has a decidedly healthy tone. Industrial activity has followed the general prosperity, and manufacturers in almost every branch of trade find difficulty in looking after the business offering. As a result labor is more or less scarce, and it is well paid. The money stringency that Canada is passing through may, in fact, be likened to the so-called growing pains which afflict the young.

Another installment of the Bureau of Corporation's reports upon the oil industry has been submitted to the President by Commissioner Smith. This report, which deals with prices and profits, is largely concerned with the operations of the Standard Oil Company, the methods of that organization being criticised in most vigorous terms. The point is made in the report that during eight years covered by its figures, that is, from September, 1897, to June, 1905, there was an increase in the average margin between the cost of crude oil and price of illuminating oil of 1.3 cents per gallon, and that a much greater increase in total margin has taken place in the by-products than in illuminating oil. The report gives figures as to the earnings and dividends of the Standard Oil Company which constitute a most remarkable contribution to the statistics of modern industry.

Once again Morocco has came into disagreeable prominence, this time as the result of the killing of a number of Europeans and the looting of shops by wild tribesmen at Casablanca, on the Atlantic coast. It being quite evident that the present Moroccan government was unable to secure protection for foreigners or to punish the lawless tribesmen, the French government sent a fleet to the coast which, after an attack by the Moors upon a landing party, bombarded the native quarter of the city, killing a considerable number of the rioters and reducing part of the town to ruins. Reports of other outbreaks in Morocco indicate that the French government may have a prolonged task before it in bringing the country to a condition of peace and order.

THE STANDARD OIL SENTENCE.

The unprecedented amount of the fine imposed upon the Standard Oil Company by Judge Landis of the United States Circuit Court at Chicago, not less than the prominence of the defendant and the importance of the questions involved, has attracted unusual attention to the disposition of the case and justifies more than a passing reference to it. The case arose out of a prosecution of the Standard Oil Company of Indiana for alleged violations of the Elkins law, approved February 19, 1903, the charge being that the defendant's property had been transported by the Chicago & Alton Railway Company at rates less than those named in the carrier's schedules filed with the Interstate Commerce Commission, as required by law. The offenses were alleged to have been committed during the period from September 1, 1903, to March 1, 1905. The indictment contained 1,903 counts, each charging the movement of a car of oil. Certain of the transportation was alleged to have been from Whiting, Ind., to East St. Louis, Ill., the remaining counts covering transportation from Chappell, Ill., to East St. Louis, Ill. The defendant company pleaded not guilty. On the trial 441 counts were withdrawn from the consideration of the jury on grounds not going to the ultimate questions involved in the case, and on the remaining 1,462 counts a verdict of guilty was rendered. The law under which the defendant was tried, it may be said, provides that every person or corporation who shall offer, grant or give, or solicit, accept or receive, any such rebate, concession or discrimination, as is forbidden by its terms, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than $1,000 nor more than $20,000.

It was proven on the trial that the shipments involved in the case were made from Whiting, Ind., where the Standard Oil Company of Indiana operates an oil refinery, to Chappell, Ill., by way of the Chicago Transfer Railroad Company; thence to East St. Louis over the Chicago & Alton Railway Company's road, and from East St. Louis over the lines of three terminal companies to St. Louis, Mo. It was also shown that prior to the shipments upon which the prosecution was based the Chicago & Alton Company had filed with the Interstate Commerce Commission and distributed to its various freight agencies tariff schedules showing the rates for the transportation of oil in car lots from Whiting, Ind., to East St. Louis, Ill., to be 18 cents per 100 pounds, and the rate for like transportation from Chappell to St. Louis, Mo., to be 19½ cents per 100 pounds. It appeared that for the service rendered to the Standard Oil Company in the transportation in question, that company paid the Chicago & Aiton road 6 cents per 100 pounds on the traffic to East St. Louis and 7½ cents for the shipments to St. Louis, bills at these rates being rendered by the Chicago & Alton Company to the defendant semi-monthly, the railroad company paying the terminal companies for their part of the service.

In justification of the use of the 6-cent rate, the defendant's traffic manager testified that in December, 1902, 1903 and 1904, he applied to the chief rate clerk at the office of the general freight agent of the Chicago & Alton Company for the rate on oil from Whiting to East St. Louis for each succeeding year, and that on each occasion the clerk handed him a document purporting to be a special billing order fixing a rate of "6 cents per cwt." "on oil and petroleum products car load in tank cars," and an application sheet applying Chicago and East St. Louis rates to similar traffic from Whiting to East St. Louis. The traffic manager further testified that on each of those occasions he inquired of the clerk whether the rate had been filed and was assured by him that it had been, and that the payments complained of were made under the honest belief that the rates in question had been filed with the Interstate Commerce Commission. It appeared, however, that the special billing order did not purport to have been filed with the Interstate Commerce Commission and was not distributed by the Alton Company to any freight agent for use in quoting rates to the general public, with the single exception that, as the rate clerk testified, a copy was retained in the tariff files at the general rate office.

It should be added that the defendant company offered in evidence certain tariff schedules as tending to show that during the period covered by the indictment there was in force on the Chicago & Eastern Illinois Railroad, from Whiting to East St. Louis, a rate on oil of 6¼ cents, which it was claimed, owing to certain terminal charges at East St. Louis to which the Alton traffic was subjected, was equal to the 6-cent rate by way of the other route. This evidence, which was offered to establish an absence of motive on the part of the defendant to accept an unlawful rate from the Alton, was excluded by the court as not being admissible on the question of the defendant's guilt or innocence in accepting the unlawful rate from the Alton. Subsequently, after a minute examination of the facts in reference to this matter, the court said that they could not be regarded as affording any ground for the mitigation of punishment.

The counsel for the defendant company raised certain constitutional objections to the Elkins law and pertinent portions of the Interstate Commerce law. They contended, for example, that the defendant had a natural right to make a private contract for a railroad rate, of which right it would be deprived by the provision of the Elkins law requiring it to pay the rate published and filed by the carrier and making a failure to do so criminal, and that that provision was in violation of the fifth amendment to the Constitution of the United States, which provides that no person shall be deprived of life, liberty or property without due process of law; that the commerce clause of the Constitution did not empower Congress to make criminal the act of the defendant in accepting a less rate than that published and filed by the carrier as required by section 6 of the Interstate Commerce law; that in the authority given to common carriers to establish rates which when published and filed shall be binding on the shipper, legislative power was improperly delegated to them in violation of section 1, article 1, of the Constitution, and that the function of the judiciary was infringed upon by the provision vesting in the Interstate Commerce Commission the power to pass upon the reasonableness or unreasonableness of freight rates. These grounds of objection were all declared unfounded by the court.

Upon a review of all the circumstances of the case, including the refusal of the defendant's counsel to furnish certain information regarding the ownership of the defendant's stock, and to present evidence tending to show that neither it nor the Standard Oil Company of New Jersey had ever violated the Interstate Commerce law before, Judge Landis imposed the maximum penalty of $20,000 upon each of the 1,462 counts—each count representing a car lot of oil—upon which the defendant was found guilty. These penalties aggregated make a total of $29,240,000, the most enormous fine ever imposed by a court of justice. It need scarcely be said that this judgment will be brought for review to the Circuit Court of Appeals and doubtless to the Supreme Court of the United States. The officials of the Standard Oil Company, of course, regard the fine as excessive. One of them said just after its imposition that it represented fifty times the total value of the oil carried in the shipments out of which the indictment arose, and without doubt the fine itself will be made the subject of review upon appeal. So, also, the Standard officials take the ground that the evidence relating to the existence upon the Eastern Illinois Railroad during the period covered by the indictment of a rate similar to that paid to the Chicago & Alton Company should have been admitted, as should other evidence of a like purport relating to other articles. The president of the indicted company is particularly concerned about the ruling of the judge regarding the responsibility resting upon the shipper of knowing the lawful rate for a shipment, a ruling which, he says, subjects shippers of freight to the risk of enormous penalties in the event of being misinformed and not exercising such diligence as the court judges proper in ascertaining what the rate really is. This ruling also will doubtless be among those brought up for review. Pending the ultimate decision in the matter it may, perhaps, be appropriate to content ourselves with remarking that it will serve a useful public purpose to have the questions at issue maturely and thoroughly considered in a case which may be said to present in their most extreme aspect the possible effects of the legislation thus far had touching the regulation of transportation rates.

PRICES LOWER ON QUIETER TRADE.

Staple prices drifted lower during July, the quieting down in trade, due partially but not entirely to midsummer influences, being instrumental in lowering the levels of nine out of thirteen groups of commodities, and causing a net decline of 1.2 per cent. in the general level of all prices from the level on July 1 to that touched on August 1. The declines were irregular, being largest in metals, which displayed weakness in iron, copper and lead as the result of lessened demand. Like influences were at work in hides and leather, many miscellaneous products, fresh and dried fruits, and vegetable oils, which latter reflected also better crop prospects. Textiles were the strongest feature, cotton goods being especially strong, while raw cotton eased, as did, indeed, most farm products (and especially breadstuffs), most dairy products and some live animals and products thereof. The approximate index number on August 1 was $8.9297, a decline, as before stated, of 1.2 per cent. from July 1 and of 2.2 per cent. from March 1, but still marking a gain of 7 per cent. over August 1, 1906, and of 10 per cent. over August 1, 1905. Compared with the high level touched on February 1, 1900, over seven years ago, the advance is 8.4 per cent., while the gain from the low level of July 1, 1896, is over 56 per cent. It is of interest as showing the widespread effect of causes making for lower prices in July, that the cable also reports a decline of about 1 per cent. in the London *Economist's* index number in the same period. Fluctuations in the price level in the past fifteen years are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Dec. 1, 1905	$8.3014
July 1, 1896	5.7019	Jan. 1, 1906	8.3289
Jan. 1, 1897	6.1164	Feb. 1, 1906	8.2415
July 1, 1897	5.8537	Mar. 1, 1906	8.2321
Feb. 1, 1900	8.2307	April 1, 1906	8.2987
June 1, 1901	7.4181	May 1, 1906	8 3054
Dec. 1, 1902	8.1413	June 1, 1906	8.3203
Aug. 1, 1903	7.7473	July 1, 1906	8.2835
Feb. 1, 1904	8.0973	Aug. 1, 1906	8.3376
July 1, 1904	7.6318	Sept. 1, 1906	8.4528
Jan. 1, 1905	8.0827	Oct. 1, 1906	8.5580
Feb. 1, 1905	8.0805	Nov 1, 1906	8.7509
Mar. 1, 1905	8.0976	Dec. 1, 1906	8.9023
April 1, 1905	7.9996	Jan. 1, 1907	8.9172
May 1, 1905	7.9700	Feb. 1, 1907	8.9953
June 1, 1905	7.9073	Mar. 1, 1907	9.1293
July 1, 1905	7.9160	April 1, 1907	8.9640
Aug. 1, 1905	8.1111	May 1, 1907	8.9356
Sept. 1, 1905	8.2705	June 1, 1907	8.9901
Oct. 1, 1905	8.2298	July 1, 1907	9.0409
Nov. 1, 1905	8.2097	Aug. 1, 1907	8.9277

The net result of the various movements during the month is illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Aug.* 1, 1906	*Mar.* 1, 1907	*July* 1, 1907	*Aug.* 1, 1907
Breadstuffs	$0.0524	$0.0762	$0.0817	$0.0927	$0.0905
Live stock	.1855	.3090	.3315	.3325	.3290
Provisions	1.3619	1.8762	2.1049	1.9107	1.9107
Fruits	.1210	.1582	.2003	.2158	.1995
Hides and leather.	.8250	1.1600	1.1975	1.2000	1.1850
Textiles	1.5799	2.5470	2.7369	2.8076	2.8312
Metals	.3757	.7213	.8466	.8442	.7773
Coal and coke	.0048	.0068	.0080	.0068	.0069
Oils	.2082	.3008	.3428	.3877	.3655
Naval stores	.0402	.0941	.1170	.0970	.0948
Building materials	.0716	.0902	.0906	.0871	.0872
Chem. and drugs	.6607	.7083	.7083	.7141	.7141
Miscellaneous	.2150	.2895	.3632	.3447	.3290
Total	5.7019	8.3376	9.1293	9.0409	8.9297

The detailed movement during July shows the following changes:

AUGUST 1, 1907, COMPARED WITH JULY 1, 1907.

INCREASES.

Oats	Tea	Connellsville coke
Beeves, live	Potatoes	Linseed oil
Hogs, live	Flax	Rosin
Hogs, carcasses	Print cloths	Brick
Eggs	Standard sheetings	Opium
Hams	Silver	Rubber
Lard	Anthracite coal	Cotton seed
Coffee	Bituminous coal	

DECREASES.

Wheat	Sugar	Copper
Corn	Beans	Lead
Barley	Apples	Tin
Flour	Lemons	Cotton-seed oil
Sheep, live	Raisins	Olive oil
Horses	Currants	Turpentine
Mutton, carcasses	Hides	Glass
Milk	Oak leather	Hops
Beef	Cotton	Tobacco
Bacon	Silk	Paper
Cheese	Pig iron, eastern	Ground bone
Mackerel	Pig iron, Bessemer	Hay
Codfish		

UNCHANGED.

Rye	Ginghams	Lime
Beef, carcasses	Cotton sheetings, southern	Nails
Bread	Iron ore	Yellow pine
Pork	Pig iron, southern	Spruce timber
Butter	Steel billets	Hemlock timber
Molasses	Steel rails	Alum
Salt	Tinplates	Bicarbonate soda
Rice	Steel beams	Borax
Peas	Quicksilver	Carbolic acid
Peanuts	Southern coke	Caustic soda
Hemlock leather	Petroleum, crude	Nitric acid
Union leather	Petroleum, refined	Sulphuric acid
Wool, O. and Pa.	Castor oil	Phosphate rock
Wool, Australian	Tar	Alcohol
Hemp		Quinine
Jute		

It will be seen here that thirty-seven articles of staple use declined in July, while twenty-three advanced and forty-five remained unchanged. Compared with a year ago

on August 1, the situation as to individual prices is as follows:

AUGUST 1, 1907, COMPARED WITH AUGUST 1, 1906.

INCREASES.		
Wheat	Lemons	Copper
Corn	Raisins	Tin
Oats	Currants	Southern coke
Barley	Union leather	Petroleum, crude
Rye	Oak leather	Petroleum, refined
Flour	Cotton	Linseed oil
Beeves, live	Wool, Australian	Cotton-seed oil
Sheep, live	Silk	Castor oil
Horses	Flax	Olive oil
Hogs, carcasses	Print cloths	Rosin
Mutton	Standard sheetings	Tar
Beef	Ginghams	Brick
Lard	Cott n sheetings,	Nails
Butter	southern	Alcohol
Cheese	Iron ore	Opium
Sugar	Pig iron, eastern	Quinine
Molasses	Pig iron, southern	Hops
Rice	Pig iron, Bessemer	Tobacco
Peas	Steel billets	Paper
Potatoes	Tinplates	Hay
Apples	Silver	Cotton seed
Peanuts		
DECREASES.		
Hogs, live	Beans	Connellsville coke
Milk	Hides	Turpentine
Pork	Wool, O. and Pa.	Lime
Bacon	Hemp	Glass
Hams	Jute	Yellow pine
Mackerel	Lead	Spruce timber
Coffee	Quicksilver	Rubber
Salt	Bituminous coal	Ground bone
UNCHANGED.		
Beef, carcasses	Steel rails	Borax
Eggs	Steel beams	Carbolic acid
Bread	Anthracite coal	Caustic soda
Codfish	Hemlock timber	Nitric acid
Tea	Alum	Sulphuric acid
Hemlock leather	Bicarbonate soda	Phosphate rock

Here it will be seen that sixty-three articles are higher, while twenty-four are lower and eighteen are unchanged.

BUILDING IN JULY.

Reports to BRADSTREET'S from fifty-four cities of the United States show a total contemplated expenditure for building during July of $43,628,877, as against a like expenditure of $45,250,649 in July a year ago and of $50,093,681 in June of this year. Following will be found the figures in detail at fifty-four American cities for July and June of this year and for July a year ago, also the expenditures reported at three Canadian cities for the same periods:

United States	*July*, 1907	*July*, 1906	*June*, 1907
Allegheny, Pa	$104,347	$165,385	$252,379
Chattanooga, Tenn	56,214	100,575	225,750
Chicago, Ill	5,316,500	4,849,960	7,043,850
Cleveland, Ohio	1,365,513	1,100,000	1,231,598
Dallas, Tex	339,039	234,885	420,795
Davenport, Iowa	140,450	42,185	112,247
Denver, Col	524,850	432,310	1,333,570
Des Moines, Iowa	44,000	82,985	98,925
Duluth, Minn	236,835	183,715	246,739
Evansville, Ind	213,504	61,633	152,457
Fort Wayne, Ind	129,450	171,175	124,940
Fort Worth, Tex	100,960	89,055	201,360
Galveston, Tex	18,835	19,698	55,890
Hagerstown, Md	25,000	18,500	36,900

Total, 3 cities	2,387,160	2,796,910	2,846,350

* New work. † Alterations.

The total for July, it will be seen, shows a decrease of 3.5 per cent. from July a year ago and a loss of 12.9 per cent. from June this year. Of the fifty-four American cities reporting, thirty-two, or about three-fifths, show increases over July a year ago, while only twenty-two, or less than one-half, show a gain over June this year. It will be seen that the large loss at New York practically explains the entire loss in expenditure from July a year ago. In fact, with New York excluded, the rest of the country shows a gain of 5.4 per cent. over July, 1906. Even with this deduction, however, the building provided for at fifty-three cities, outside of New York, for July is nearly 5 per cent. less than in June.

A REVISED CIRCULATION STATEMENT.

Some disarrangement in the statistics of circulation has been produced as the result of the adoption by the Division of Loans and Currency in the Treasury Department of the revised estimate of the stock of gold recently made by the Director of the Mint. As one outcome, it is to be noted, the estimate of circulation per capita on August 1 is less by $1.59 than the figure given on July 1, and smaller by 25 cents than that given on August 1 of last year. The reduction is owing to the deduction of $135,000,000 from the stock of gold coin and bullion. This change in the estimates as to the general stock of gold in the country and in circulation will render new comparisons necessary, and it may be of interest to present here the revised estimates brought down to August 1, as furnishing a new basis for comparative statistics as to the changes in the body of circulation as a whole.

The general stock of money in the United States, the amount held in the Treasury as assets of the government, and the money in circulation on August 1 are set forth in detail in the following table:

	General stock of money	*Held in Treasury*	*Money in circulation*
Gold coin, including bullion in Treasury	$1,474,168,738	$213,201,144	$556,036,725
Gold certificates	....	80,469,480	614,461,389
Standard silver dollars	562,360,530	7,036,863	81,255,667
Silver certificates	....	10,251,563	463,816,437
Subsidiary silver	130,836,567	8,587,949	122,248,618
Treasury notes of 1890	5,891,000	9,950	5,881,050
United States notes	346,681,016	5,576,546	341,104,470
National bank notes	623,395,886	16,876,682	586,519,204
Total	3,123,333,737	342,010,177	2,781,323,560

It may be remarked that the total amount of money in circulation on August 1 was, according to the latest estimate, $2,781,323,560, which was a little over $133,000,000 less than that given in the statement for July 1. This reduction was almost wholly under the head of gold coin, which showed a reduction of over $132,700,000 as compared with the figure given as for the beginning of July. The other changes for the month about balanced one another. There was an increase of over $11,480,000 in gold certificates and one of over $490,000 in subsidiary silver, but there were decreases of over $6,550,000 in silver certificates, of over $3,570,000 in national bank notes, of over $1,600,000 in United States notes, of over $438,000 in standard silver dollars, and of over $94,000 in Treasury notes of 1890.

When we come to make comparisons with August 1 last year we find a somewhat different state of affairs. The stock of gold in circulation on the first of the current month is given at a figure less by over $109,900,000 than that estimated on August 1, 1906, but the increases overbalance the decreases in the other items, so that the total at the beginning of the present month shows an increase of over $23,900,000 as compared with the corresponding date last year.

With the exception of that under the head of gold coin, only two decreases are noted for the year, namely, one of over $6,900,000 in silver certificates and another of a little over $1,300,000 in Treasury notes of 1890. The most notable increase was one of over $85,100,000 in gold certificates. After that came in order gains of over $10,200,000 in subsidiary silver, over $8,000,000 in national bank notes, over $4,600,000 in United States notes, and over $4,100,000 in standard silver dollars. Estimated on the basis of a population of 86,193,000, the per capita circulation is put at $32.27. This, as has been remarked above, represents an apparent decrease of 25 cents as compared with August 1 last year. The real conditions, of course, are far otherwise. In order to arrive at a true basis for comparison, it will be necessary to deduct $135,000,000 from the estimate of circulation outstanding on August 1 last year and to calculate the amount per capita on the remainder, leaving the population figures unchanged. In this way we arrive at a per capita circulation of $30.93 on August 1, 1906, so that, as will be seen by comparing the figures, instead of a loss of 25 cents in the amount per capita as compared with that date, there was an increase of $1.34 on August 1 of the present year.

AGRICULTURAL IMPLEMENT MANUFACTURE.

The Bureau of the Census has issued a bulletin dealing with the statistics of the manufacture of implements used for tilling the soil, sowing the seed, harvesting and preparing the various crops for market. The report shows that from 1900 to 1905 the number of establishments decreased by 9.4 per cent., the number of officials, clerks, etc., decreased 28.3 per cent., and the salaries paid decreased 9.5 per cent. On the other hand, the capital employed increased by 24.8 per cent., the number of wage earners increased 1.7 per cent., the wages paid increased 11.4 per cent., miscellaneous expenses increased 33.2 per cent., cost of materials used gained 9.9 per cent., and the value of products increased 10.7 per cent. There were 648 establishments in the industry in 1905, in which was invested $196,740,700 capital, employing 7,199 officials and clerks and 47,394 wage earners. The wages paid were $25,002,650, the cost of materials used was $48,281,406, and the value of products was $112,007,344. As illustrative of the consolidations which have occurred, it is stated that it is impossible to give statistics of manufacture in some cities of heaviest production, because they would disclose individual operations. Thus, Chicago is excluded, and no separate data can be given for that city in 1905, though it is the first in rank.

Of four main classes of articles manufactured in establishments of the implement industry, implements of cultivation and harvesting are the most important, with a value of $30,607,960 and $30,862,435 respectively; the miscellaneous class ranks next with $19,534,114, followed by seeders and planters with a value of $11,225,122, and seed separators, worth $6,639,883. Horse corn planters increased steadily from 1890 to 1905, while the number of hand corn planters advanced from 1870 to 1900 and then declined. Of implements classed as seeders and planters, bean planters, cotton planters and manure spreaders have made the most marked gains since 1900, and of implements of cultivation, beet cultivators, celery hillers, markers, and furrowers, steam and disk plows and rollers the greatest proportional increase. The output of scythes has decreased steadily since 1880. The demand for the hoe remains steady, the output of 1905 (331,620 dozens) showing an advance of 54,447 dozens since 1900.

Ranked in the order of the value of products, the leading states are: Illinois, $38,412,452; New York, $13,045,891; Ohio, $12,891,197; Wisconsin, $10,076,760; Michigan, $8,719,719, and Indiana, $8,060,575. The first three states have held highest place since 1860, and in 1905 contributed 57.5 per cent. to the total value of products, Illinois alone contributing 34.3 per cent. It is noted that this country leads the world in the exportation of agricultural implements, with the United Kingdom as its principal competitor. In the fifteen years ending 1905 the extension of trade to foreign countries has been remarkable. The value of exports during the fiscal year 1905 formed 18.5 per cent. of the total value of products of the census year 1905 and 15.9 per cent. in 1900, whereas in 1890 the proportion was only 4.7 per cent. Russia and Argentina, the two great wheat-producing countries, were in 1905 the leading importers of American agricultural machinery. Russia received 18.6 per cent. of the total value of exports, nearly four times as much as in 1900, and Argentina 24.3 per cent., an increase of 178.7 per cent.

WHEAT STOCKS ON AUGUST 1.

American and Canadian visible wheat supplies on August 1 aggregated 63,663,000 bushels, a decrease of 1,887,000 bushels from the stock held on July 1. A year ago there was an increase of nearly 8,000,000 bushels shown at the same storage points, and two years ago the gain was nearly 1,917,000 bushels. These figures indicate two things. One is that the lateness of the season this year has affected the movement of the American wheat crop to market, and the slight gain shown in the stocks held in the United States has been more than offset by the larger decline shown in stocks held in Canada. Another fact is that the large gain in stocks in the United States in July a year ago has made for a relatively less bearish showing in the visible supplies on August 1 than on July 1 this year. Thus the excess in stocks held in the United States and Canada on July 1 this year over last was 30,433,000 bushels, but on August 1 the excess in stocks was only 20,554,000 bushels. The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on August 1, 1907, compare with the same period of the four preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
August 1, 1907	62,392,000	1,171,000	63,663,000
August 1, 1906	41,211,000	1,898,000	43,109,000
August 1, 1905	20,314,000	581,000	20,895,000
August 1, 1904	18,015,000	1,351,000	19,366,000
August 1, 1903	20,532,000	1,400,000	21,932,000

Still it will be seen that August 1 stocks were 46 per cent. larger than those held a year ago on that date, and are more than three times the stocks held on August 1 of the preceding four years. Just how the stocks are divided between this country and Canada appears in the following table:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,403,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
July 1	49,131,000	16,419,000	65,550,200
August 1	51,549,000	12,114,000	63,663,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,189,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,564,000
May 1	42,828,000	12,303,000	55,181,000
June 1	34,996,000	8,700,000	43,696,000
July 1	28,936,000	6,181,000	35,117,000
August 1	30,518,000	3,591,000	43,109,900

American stocks, it will be seen, increased 2,418,000 bushels in July, while Canadian stocks fell off 4,305,000 bushels. A year ago in July the American stocks increased 10,582,000 bushels, while the Canadian stocks decreased 2,590,000 bushels. The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same dates, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	20,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	63,7	43,1	20,9	59,3	62,7	72,1	123,0	108,4	93,0
Sept. 1	....	45,2	22,8	....	70,7	73,0	....	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

European stocks fell off 12,000,000 bushels in July, as against an identical decrease in the same period a year ago. The total stock in and afloat for Europe is seen to be 3,400,000 bushels smaller than a year ago, which, as above shown, compares with an excess in this country and Canada of over 20,000,000 bushels. The total combined American and European stocks, it will also be seen, fell off 13,800,000 bushels in July, but is still 14,600,000 bushels larger than a year ago, and 30,000,000 bushels larger than on August 1, 1905.

THE STOCK-MARKET BREAK.

At the outset of the week the stock market seemed inclined to take the enormous fine imposed on the Standard Oil Company with a certain degree of calmness. The initial impression in that quarter, in fact, appeared to be that the case would be appealed, that a long delay was sure to ensue, and that it was a matter of doubt whether the government would ever collect the full $29,240,000 involved in Judge Landis's decision. As the week progressed, however, it became plain that the imposition of the heavy Standard Oil fine, coupled with the attacks on railroads in southern states, the intimations that additional proceedings were to be instituted against other industrial combinations and railroad companies, and that, furthermore, criminal proceedings were contemplated against individuals, had been to create a real feeling of apprehension on the part of holders of capital, both large and small. As soon as this was perceived by leading speculative operators in the market they lost no time in directing a well-organized attack upon prices. An enormous liquidation of long stock encouraged their efforts. Rumor was busy with the names of important capitalists, who, it was alleged, had concluded that the end of the agitation against corporations and railroads was not yet in sight, and that it was useless to look for any improvement in stock values under the circumstances. The stories were that such people very generally concluded to sell out their speculative holdings of securities, and the appearance of the market would certainly seem to justify such allegations, in part at least. It was, at any rate, apparent that for the time being the market was left without support, and invitingly open to just such a bearish raid as was witnessed. It is needless to say that under these circumstances there was heavy and continued selling by commission houses, representing the closing out of weak speculative holdings.

The movement of the present week, it has been pointed out, differs, however, in many respects from an ordinary attack by manipulators, based on an overbought position on the part of the public. In this instance the bears found the market ready to respond to their efforts and did not have to resort to rumor-mongering or manufactured apprehensions about the solvency of institutions or particular financial interests. The results, however, have been the same, and in a number of instances prices for active railroad or industrial securities have approximated to the low figures reached during the semi-panic of last March. The following tabulation, giving a comparison of the high prices of the year (touched in most cases in last January) with the low quotations in March, the prices of the succeeding partial recovery, and the extreme declines of the present week, will therefore be of interest:

	High, 1907	*Low, Mar.*	*High, July*	*Low, present week*
Atchison	108¾	82⅝	95	86
Baltimore & Ohio	122	90⅛	99⅜	93⅞
Brooklyn Rapid Transit	83⅝	42¼	60½	49½
Canadian Pacific	195½	155	178½	165½
Chicago, Mil. & St Paul	157½	122½	136⅝	122½
Erie	44¼	21⅞	26¼	22½
Great Northern	189¾	126	138⅜	123
Louisville & Nashville	145⅛	108	118¼	105½
Missouri Pacific	92¾	64	77⅜	70
New York Central	134¾	111½	114⅜	107½
Northern Pacific	189½	114¼	137⅝	120½
Pennsylvania	141⅜	114	125⅝	118¼
Reading	139⅛	91	108⅞	93
Rock Island common	30⅛	17⅞	22½	20
Southern pfd	94½	53	69	59½
Southern Pacific	96¼	69¾	91⅝	82⅜
Union Pacific	183	120¼	148	127½
Amalgamated Copper	121⅞	78½	94	74½
American Smelting	155	104¼	122¼	99⅞
American Sugar	137½	114⅞	124¾	113
United States Steel	50⅜	31½	39	31⅞
United States Steel pfd	107¾	91½	101	96¼

As already mentioned, the course of prices recalled the slump of last spring, although it is to be noted that in most cases the declines did not extend to the low level of that movement. The principal exceptions to this are the stocks of southern railroads and the copper issues, for which in each case special causes exist in the form of the anti-railway agitation at the south and the decline in copper metal values. The extent to which the bear interest figured in the proceedings may be gathered from the decided way in which stocks rallied from the low point on last Thursday, when the renewed appearance of support from some quarter arrested the demoralization and left the market in an improved condition, though sentiment in Wall street is still more or less mixed with regard to the future.

VANDERBILT ROAD EARNINGS FOR THE HALF YEAR.

The publication on Thursday of the gross and net earnings returns of five of the Vanderbilt roads, comprised within the New York Central system, for the first half of 1907, showed the inroads which increased cost of labor, materials and general operation have made upon largely increased gross earnings. A summary of gross and net earnings of the roads reporting for the half year is as follows:

SIX MONTHS ENDING JUNE 30.

Gross	1907	*Increase*	*Decrease*
New York Central	$46,930,896	$4,051,670	....
Lake Shore	21,580,537	982,442	....
Lake Erie & Western	2,432,538	....	$92,841
Michigan Central	13,833,982	1,214,838	....
Cleve., Cin., Chic. & St. L.	12,439,772	1,077,252	....
Total, 5 roads	97,226,725	7,326,202	92,841
Net			
New York Central	9,530,381	....	2,572,930
Lake Shore	5,276,266	1,080,284	....
Lake Erie & Western	591,421	....	24,447
Michigan Central	2,502,559	217,333	....
Cleve., Cin., Chic. & St. L.	2,723,063	210,580	....
Total, 5 roads	20,623,690	1,508,197	2,597,377

Here it is found that gross earnings for the half year total $97,226,725, a gain of 8 per cent. over the like period of 1906. Net earnings, however, aggregate only $20,623,690, a decrease of 5 per cent. from a year ago. New York Central (main line) showed a gain of $4,051,670 in gross but lost $2,572,930 in net as compared with the first half of 1906. Herewith is found the New York Central (main line) statement for the half year:

	1907	*Increase*
Earnings	$46,930,896	$4,051,670
Expenses	37,400,514	6,624,600
Net earnings	9,530,381	*2,572,930
Other income	4,911,076	1,665,841
Gross income	14,441,458	*907,088
First charges and taxes	11,404,091	438,512
Available for dividend	2,947,367	*1,345,600
Dividend (3 per cent.)	5,358,960	1,629,015
Deficit	2,411,592	2,974,615

* Decrease.

Operating expenses, it will be seen, aggregated 79.69 per cent. of gross earnings this year; so that while gross earnings increased by 9.4 per cent., operating expenses increased by 21 per cent. There was available for dividend purposes from the half year's earnings $2,947,367, but the 3 per cent. dividend paid required $5,358,960, so that a deficit was shown of $2,411,593, as against a surplus of $563,023 a year ago.

The explanation of the poor showing by the New York Central main line for the first half of the year of course is found largely in the very poor results of the first quarter, published three months ago. The second quarter's results were really very good, as shown by the following statement:

NEW YORK CENTRAL AND HUDSON RIVER.

Quarter ended June 30	1907	*Increase*
Earnings	$25,142,126	$3,555,155
Expenses	19,197,643	3,869,491
Net earnings	5,944,482	*314,336
Other income	2,551,561	808,008
Gross income	8,496,043	583,671
First charges and taxes	5,768,169	235,416
Available for dividend	2,727,874	348,255
Dividend	2,679,480	814,507
Profit	48,394	*466,251

* Decrease.

The statements of the Lake Shore, Michigan Central and Cleveland, Cincinnati, Chicago & St. Louis railways for the half year follow:

LAKE SHORE AND MICHIGAN SOUTHERN.

	1907	*Increase*
Earnings	$21,589,537	$982,441
Expenses	16,313,271	*97,842
Net earnings	5,276,265	1,080,284
Other income	1,950,000	300,000
Gross income	7,226,265	1,380,284
First charges and taxes	4,206,667	776,667
Available for dividend	3,019,598	603,616
Dividend (6 per cent.)	2,967,990	989,330
Surplus	51,608	*385,713

MICHIGAN CENTRAL.

	1907	*Increase*
Earnings	$13,833,981	$1,214,838
Expenses	11,331,423	997,505
Net earnings	2,502,558	217,332
Other income	250,637	50,205
Gross income	2,753,196	267,538
First charges and taxes	2,115,519	155,064
Available for dividend	637,677	112,473
Dividend (3 per cent.)	562,140	187,380
Surplus	75,537	*74,906

CLEVELAND, CINCINNATI, CHICAGO AND ST. LOUIS.

	1907	*Increase*
Earnings	$12,439,771	$1,077,252
Expenses	9,716,708	866,671
Net earnings	2,723,062	210,580
Other income	53,788	*21,375
Gross income	2,776,851	189,205
First charges and taxes	2,235,519	97,607
Available for dividend	541,331	91,597
Dividend	1,191,122	229,405
Deficit	649,790	137,807

* Decrease.

After paying its dividend for the half year Lake Shore had a surplus of $51,608, a decrease of $385,713 from a year ago. Michigan Central had a surplus of $75,537, a decrease of $74,906; Cleveland, Cincinnati, Chicago & St. Louis had a deficit of $649,790, an increase of $137,807, and Lake Erie & Western had a surplus of $452, a decrease of $887 from 1906. The five lines reporting, therefore, had a net deficit after dividends of $2,933,786.

EDITORIAL NOTE.

Among the earliest of the preliminary railroad company reports for the fiscal year which ended June 30, 1907, is that of the Norfolk & Western Railway. This showing was naturally regarded as somewhat important, because the company in question is one of the leading transporters of bituminous coal to the seaboard. Compared with the results of the preceding fiscal year, the showing is as follows:

Year ending June 30	1907	1906	*Increase*
Gross earnings	$31,164,381	$28,487,765	$2,676,616
Operating expenses	19,514,535	17,064,624	2,449,811
Net earnings	11,649,846	11,423,141	226,705
Other income	150,000	165,344	*15,344
Total income	11,799,846	11,588,485	211,361
Fixed charges and taxes	4,711,696	4,120,788	590,908
Surplus after charges	7,088,150	7,467,697	*379,547
Preferred dividends	919,644	919,644	....
Surplus for common	6,168,406	6,548,053	*420,353

* Decrease.

It will be seen from this that with a large increase in the gross earnings there was an almost equally heavy augmentation of the company's operating cost, so that the net earnings were only $226,705 larger, such results being in keeping with the general tendencies in connection with the revenues of the country's railroads, as the outcome of higher wages and the enhanced cost of material and supplies. Moreover, the fixed charges were $590,908 larger, so that the surplus after the same was $379,547 smaller than the year before, these figures being also in agreement with the results on other roads for the past year. The outcome as regards the common stock, displaying as it did about 9½ per cent. earned thereon, as against 10 per cent. in the preceding year, was not altogether unfavorable, but tended to confirm the feeling that railroad net revenues are likely to show a considerable shrinkage. The chief feature of the showing, indeed, is that the company's operating expenses represented 62.61 per cent. of the gross, against 59.90 per cent. the year before, though it is important to observe that the company increased rather than diminished its outlay for maintenance of its roadbed, structures and rolling stock.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Office—Eligibility—Time—Contracts.

The Supreme Court of Indiana held, in the case of Hay, Mayor, etc., vs. State, that a fact constituting ineligibility to a city office at the time of election, such as the fact that a candidate was an officer of a trust company having contracts with the city, did not make the candidate incapable of being legally elected to such office if he would become eligible before the time for taking the office, or would have it in his power to become eligible by merely changing his other employment.

Employer's Liability—Shooting.

The Supreme Court of Pennsylvania held, in the case of Shay vs. American Iron & Steel Manufacturing Company, that a corporation was not liable for damages to a house and injuries to the owner thereof through negligent shooting by men employed by it to take the places of striking employees, where, although the shooting was directed from the defendant's premises against a mob, it was not authorized by the defendant and was not within the scope of the employment of the persons doing it.

Bill of Lading—Negotiability—Railway.

The Supreme Court of Minnesota held, in the case of Barnum Grain Company vs. Great Northern Railway Company, that a bill of lading upon which are stamped the words "not negotiable unless delivery is to be made to the consignee or order," is exempt from the provisions of section 7649 of the General Statutes of 1894; that the rights of parties thereunder are determined by common-law principles, and that if a railway company, after issuing such a bill of lading, delivers the goods to the consignee named therein without requiring the bill of lading to be produced, it does so at its peril.

Kentucky's Boundary—Ohio River.

The Kentucky Court of Appeals held, in the case of Ware vs. Hager, Auditor, that while it was well settled that the boundary of the state of Kentucky extended to the northern shore of the Ohio river at low-water mark, and it had also been held that patents issued by that state for land on the Ohio river gave the patentees title to the head of the stream, there was no statute authorizing the granting of a patent to land beneath the waters of the Ohio river between the thread of the stream and the low-water mark on the northern shore, and that while the legislature might provide for the issuing of patents for the bed of the Ohio river north of the thread of the stream, so that the sand or minerals which might be on or under the land might be appropriated, it hadnot done so.

Trade Name—Representations—Equity.

The United States Circuit Court for the District of Rhode Island held, in the case of Moxie Nerve Food Company of New England vs. Modox Company, that the fact that the manufacture of an article, sold as both a medicine and a beverage, built up its business in part on misrepresentations made upon its labels and wrappers and in its advertisements respecting the medicinal properties of the article, would not debar it from relief in equity against unlawful imitation of its trade name and unfair competition where it had permanently discontinued such misrepresentations and made only such representations as were considered warranted by a substantial amount of medical opinion. The court granted a preliminary injunction, saying that, in order to avail, the defense of unclean hands must be made at the time when the party applies for equitable relief.

Street Railway—Fellow-Servant.

The Supreme Court of Indiana held, in the case of Fort Wayne & Wabash Valley Traction Company vs. Crosbie, that a street-railroad company that negligently required a motorman to operate a car after he had been continuously working for it without sleep for more than twenty-four hours could not hide behind the fellow-servant doctrine, where the motorman's omission of duty by reason of his resultant physical condition caused an injury to the conductor on another car, and that a declaration by the defendant company's superintendent, half an hour after the injury, and four miles distant from the place of the accident, that "he should have known better than to put the motorman on the car," was not competent evidence as an admission by the defendant, nor as part of the res gestæ.

Insurance—Settlement—Acceptance.

In the case of The Northwestern Mutual Life Insurance Company vs. Joseph, decided by the Kentucky Court of Appeals, it appeared that an insured elected to take a cash settlement of his policy from the appellant company and mailed his acceptance of a proposition to that effect to the company, but died in the forenoon of the day before the acceptance reached the company in the afternoon. His widow refused to accept the settlement thus made and sued upon the policy. The court held that the contract was completed when the letter of acceptance was mailed, and that it was error on the part of the lower court to allow a recovery upon the policy.

Carriers—Connecting Lines—Notice.

In the case of The Mulrooney, Ryan & Clark Company vs. Western Transit Company, recently decided by the Supreme Court of Minnesota, it appeared that a contract for the transportation of certain goods from New York to St. Paul over the lines of different carriers provided that notice of claim for damages for injury to the goods should be given by the consignee within thirty days after the arrival of the same "to the agent at point of delivery." The goods were damaged while in the possession of the defendant, the contracting and an intermediate carrier, and it had an agent at St. Paul, the destination of the goods, but its line did not extend to that point. The court held that notice of claim for damages given to the agent of the final or delivering carrier was as to the defendant a sufficient compliance with the terms of the contract.

Insurance Company—Trade Name.

In the case of Atlas Assurance Company vs. Atlas Insurance Company, recently decided by the Supreme Court of Iowa, it appeared that the plaintiff, an insurance company, was organized in England under the name of the Atlas Assurance Company in 1808 and did business in Iowa continuously since 1892 under a permit issued by the state. In January, 1897, a local mutual fire-insurance company changed its name to the Atlas Mutual Fire Insurance Company, and in March, 1905, the defendant, a stock company, was organized in Iowa under the name of Atlas Insurance Company and reinsured all the outstanding risks of the mutual company. In an action to restrain the use of the name by the defendant, the court held that the fact that the plaintiff was a foreign insurance company doing business in Iowa by comity under a license from that state did not deprive it of the right to protection against the unlawful use of a portion of its name and trade symbol by an Iowa insurance company; that an insurance company, though not engaged in the manufacture of articles of commerce, is nevertheless entitled to protection in its use of a trademark, and that the resemblance between plaintiff's and defendant's name was such as to mislead the ordinary purchaser of insurance, and that therefore the defendant's use of the name should be restrained.

Statutory Construction—Punctuation.

The Supreme Court of Maine gave its adhesion, in the case of Taylor vs. Inhabitants of Town of Caribou, to the doctrine that while punctuation is subordinate to the text and can never control the plain meaning of a statute, nevertheless resort may be had to it to aid in the construction in case of doubt. In the case before the court it appeared that the Revised Statutes of the state defined personal estate for purposes of taxation to include, among other things, "all obligations for money or other property; money at interest, and debts due the person to be taxed more than they are owing." The defendants contended that the words "more than they are owing" related to debts alone, while the plaintiff contended that they modified and related to money at interest as well as to debts. The court examined the original statute, which was passed in 1845, and found that in it a comma was placed not after "interest" but after "taxed," in the passage referred to, thus making it clear that the clause "more than they are owing" related to and modified both money at interest and debts due the person to be taxed, an expression of legislative will which it regarded as more reasonable than the other contended for, and it held that a change in phraseology in the reënactment of a statute in a general revision does not change its effect unless there is an evident legislative intention to work such a change, and that the reason for the rule applies with equal force to changes in punctuation.

BUSINESS NOTES.

Diamonds in Arkansas.

Dr. Kunz, the well-known authority on precious stones, is quoted as vouching for the genuineness of the diamonds recently discovered in Arkansas. Dr. Kunz is said to be fully satisfied that an American diamond field has at length been discovered. "This peculiar formation," he said, "is volcanic rock of igneous stock, very similar to that of the South African diamond mines. In extent it covers about 100 acres; the stones, however, have all been found in an area some five acres in extent between two dikes, where a roadway has cut up the decomposed rock. Last reports place the total number of stones discovered at 130. Many are white and of good water, while others are yellow and some are brown. The two largest stones weigh six and one-half carats, one exceedingly fine and white and the other brown. Of earlier discoveries in Wisconsin, Ohio, Indiana and Michigan, it has been found that the occurrence of the precious stone was so unusual that it probably could be traced to the deposit of a glacial moraine. Pike county is several hundred miles south of the glacier line, and there seems to have been no way for the stones to have appeared there, except that they are in their original places."

Product on of Mineral Waters.

Final returns compiled by the United States Geological Survey show that the total production of mineral waters in the United States in 1906 was 48,518,395 gallons, valued at $8,065,841, a gain of 1,974,034 gallons in output and $1,574,590 in value over the figures for 1905. In compiling the returns the survey has endeavored to make its statistics represent only natural waters, sold still or carbonated, in bulk or in bottles, excluding water used for city supplies, water given away or used by guests at resorts, and water marketed in the form of ginger ale and other soft drinks. Minnesota leads in production but not in total value, the sales representing chiefly table waters marketed locally. Wisconsin is a close second to Minnesota in production and far exceeds all states in value of output, the famous wells of Waukesha giving it this prominent position. The production of that state in 1906 was 8,252,718 gallons, valued at $2,422,694. New York ranks third in the list of producers, the water sold at Saratoga Springs and the large trade worked up by prominent table-water springs giving the state its position. The output in 1906 was 6,481,074 gallons, valued at $893,476. Massachusetts, which was fourth in rank, produced 3,857,955 gallons, valued at $210,152, the product having been derived from many small springs that meet local demands for pure and pleasant drinking water.

Alabama's Progress.

The Birmingham *Age-Herald* has issued a twenty-four page industrial review of Alabama's progress. Editorially our contemporary says: "Ten years ago we mined but 5,893,771 tons of coal; this year our coal production will be carried beyond 13,000,000 tons, a gain of over 150 per cent. Ten years ago our stacks turned out but 947,831 tons of pig iron; this year we bid fair to reach a production of nearly 1,800,000 tons. Here is a gain of nearly 100 per cent. These gains are but a prelude, an intimation of what is to come, for in the coming years the tides of immigration will perforce be turned toward the south, simply because cheap lands will not then be found in other sections of the country. Nor is this all. The Panama canal will be completed in the next ten years, and the fast-rising river improvement movement will be largely turned this way, simply because the great central west will demand low rates to the sea and to the Panama canal. The outlook of the southern states was never brighter than it is to-day. The gulf ports and the central west are the fulcrums from which will spring a marvelous prosperity of the south in the next ten years, and the biggest optimist we have may underestimate what is plainly headed toward us in the coming decade."

New National Banks.

A valuable addition to the usual information contained in the monthly summary of national banks, issued by the Comptroller of the Currency each month, appears in the August bulletin. It gives the number and capital of all national banks in operation at the time of the last call of the Comptroller for condition of national banks on May 20. It is the Comptroller's intention to give this information five times a year, or so soon after a bank call as possible. Up to the present this information was confined to banks organized under the act of March 14, 1900, making it possible for national banks to be started with $25,000 capital. In amount of capital the first five states rank thus: New York, $158,293,100; Pennsylvania, $111,613,810; Ohio, $59,327,770; Massachusetts, $59,217,500; Illinois, $54,100,300. In number of banks the first five states stand: Pennsylvania, 722; Texas, 510; New York, 401; Illinois, 389; Ohio, 358. The national banks of New York state have more capital than all the national banks of all the southern states, and more than all the national banks of the New England states and the Pacific coast states combined. At the close of business July 31 there were in existence 6,550 national banking associations, with authorized capital stock of $902,405,775; circulation outstanding secured by bonds, $555,023,290; circulation secured by deposits of lawful money, $48,372,596, making the total amount outstanding, $603,395,886. During July forty associations, with aggregate capital of $1,540,000, were chartered. The number of national banks in existence, authorized capital stock, bonds on deposit to secure circulation, secured by bonds and by lawful money, on March 14, 1900, October 31, 1906, and July 31, 1907, follow:

	Mch. 14, 1900	*Oct.* 31, '06	*July* 31, '07
Number of banks	3,617	6,225	6,550
Authorized capital	$616,308,095	$845,939,775	$902,405,775
Bonds on deposit	244,611,570	539,653,180	558,582,550
Circulation, on bonds	216,374,795	536,033,169	555,023,290
Cir., lawful money	38,027,935	46,238,816	48,372,596
Total circulation	254,402,730	583,171,985	603,396,886

Canadian Pig-Iron Production.

The statistics of the American Iron and Steel Association show that the production of pig iron in the Dominion of Canada in the first half of 1907 was 270,100 gross tons, as compared with 259,947 tons in the second half of 1906 and 282,010 tons in the first half. Of the total 265,253 tons was coke iron and 4,847 tons charcoal iron. The production of Bessemer pig iron amounted to 73,023 tons, against 86,558 tons in the last half of 1906 and 79,051 tons in the first half. The production of basic pig iron was 161,403 tons, as compared with 110,930 tons in the last half of 1906 and 135,298 tons in the first half. The production of malleable Bessemer, foundry, forge and miscellaneous grades was 35,674 tons, a considerable falling off from the record of 62,459 tons in the last half of 1906 and 67,661 tons in the first half. The following gives the half-yearly production in gross tons:

	1904	1905	1906	1907
First half	120,643	210,206	282,010	270,100
Second half	150,299	257,797	259,947	....
Total	270,942	468,003	541,957	....

On June 30, 1907, Canada had fourteen completed blast furnaces, of which ten were in blast and four idle. In addition, one coke furnace was being built and one charcoal furnace was being rebuilt. Three coke furnaces were also partly erected on the same date.

Earnings of Electric Properties.

The *Electrical World* points out that electric street-railway earnings in this country are now in excess of $360,000,000 per annum, and then our contemporary says: "It is well known that street railways constitute by far the largest field of electrical effort, but there is reason to believe that electric lighting as an industry is growing more rapidly. The rate of increase in street-railway earnings appears to be very close to 10 per cent. annually. But in electric lighting, gains of 20, 25 and 30 per cent. reported by central-station companies have been quite common, and they are supported by other statistics. In his recent excellent paper before the National Electrical Contractors' Association, Mr. J. R. Crouse, Jr., in speaking of the effects of the campaign of coöperative development, stated that incandescent lamp sales had increased 20 per cent. in 1906 over the preceding year, and so far in this year are 25 per cent. over the corresponding period of 1906. Moreover, the gain of the central-station systems may easily be, and doubtless is, greater than that in lamp production, for the reason that the tendency to establish isolated plants has been definitely checked by the extension of circuits and the lower prices of electrical energy. Narrowing these hints and suggestive data down to a practical point, we may note that our estimate at the beginning of the year of $360,000,000 street-railway earnings was accompanied by one of $175,000,000 for electric-lighting systems. The latter figure is probably also quite near the mark. But in view of the rate of growth being in one instance at least twice as great as in the other, it should not be many years before central stations will also be earning $360,000,000 a year.

CURRENT BUSINESS NEWS.

Commercial.

King's circular points out that many do not appreciate how much wheat the different countries raise. Barton and Sumner counties, Kansas, raise as much as all Spain. United Kingdom raises less than North Dakota. Germany will have less than the Dakotas this season. Russia and France are the only wholesale producers in Europe. Russia raises third of its crop, and almost as much as our country this season. France raises almost as much as our winter-wheat crop. Africa is not increasing its wheat product and produces about as much as Nebraska. Australia raises about as much as our Pacific coast; the harvest is in January, and a full crop has been secured. Asia raises only 50,000,000, bushels outside of India. India harvests in March, and has nearly as much as France this season. Canada promises about as much as North Dakota. The world's crop is now estimated at 3,050,000,000 bushels, about 300,000,000 less than two previous seasons.

The N. K. Fairbank Company estimates stocks of lard held in the United States, Europe and afloat therefor as follows: August 1, 1907, 374,683 tierces; July 1, 1907, 339,232; August 1, 1906, 300,267; August 1, 1905, 427,016; August 1, 1904, 350,538; August 1, 1903, 223,488.

Officials of the American Can Company have information to the effect that the Delaware tomato crop will exceed in value of $3,000,000 this year. The sale of cans in that section has already been large, indicating that the pack will be the largest on record.

The London *Economist's* index number of average prices of commodities at the opening of August was 2,571, compared with 2,594 on July 1, and with 2,329 on August 1 last year.

The Missouri state report makes the condition of corn 83, against 77 last month and 90 last year. This is a gain of 6 points for the month. The crop is reported about three weeks late, but with an ordinary autumn there is time for maturity. The October condition last year was 90, and the crop 233,000,000 bushels. The indications for the wheat crop are about the same as last month, 30,000,000 bushels, average yield 13.6, against 13.5 estimated last month. The crop last year by the government report was 31,724,000 bushels.

The Ohio August report makes wheat prospects, compared with an average, 80, against 79 last March and 99 last year, when crop was 43,000,000 bushels. Oats prospects, compared with an average, 71, against 76 last month and 77 last year, when crop was 46,000,000 bushels.

The following table shows the condition of cotton on July 25 of this year and of the two preceding years, with the respective ten-year averages, also the condition on June 25, 1907:

	July 25, 1907	*June* 25, 1907	*July* 25, 1906	*July* 25, 1905	10-yr *av'ge*
Virginia	65	65	83	78	85
North Carolina	75	72	75	80	84
South Carolina	81	79	72	79	81
Georgia	81	78	74	82	83
Florida	84	83	72	85	84
Alabama	72	68	83	79	82
Mississippi	71	67	88	69	82
Louisiana	71	66	88	66	84
Texas	75	72	86	71	82
Arkansas	68	67	89	68	84
Tennessee	75	69	88	80	85
Missouri	66	64	95	85	86
Oklahoma	74	74	92	83	86
Indian Territory	74	73	85	82	88
United States	75.0	72.0	82.9	74.9	82.6

The condition of corn in Iowa August 1 was 79, a gain of 3 points for the month; oats 76, a loss of 13 points, on account of rust.

The condition of wheat in Saskatchewan is very favorable, but still late, being about ten days behind. With favorable weather harvest will begin September 2, instead of about August 25, the usual time.

Foreign crop conditions as published Tuesday in the Liverpool *Corn Trade News:* United Kingdom—Weather has improved but is still unseasonable, and wheat is ripening slowly. The outturn is estimated at 52,000,000 bushels. France—Harvesting is proceeding slowly. Germany—Weather continues very unseasonable. Under the most favorable conditions it will be necessary to import 16,000,000 bushels of wheat, more than last year. Hungary—Official estimates are fractionally raised. Prospects for corn have improved, and the outlook for potatoes is good. Russia—Harvest returns are extremely irregular. Winter yields are only medium on a reduced acreage. Spring wheat variable, showing from 9 to 30 bushels per acre, according to location. Roumania—The wheat crop is a small one, but of a fine quality. Servia—It is officially estimated that the harvest will be an average one. Corn promises medium; fodder scarce, necessitating a prohibition of the export of hay. Italy—Most estimates regarding the yield of wheat are being reduced. Spain—Official reports confirm a short crop, and it is expected that 16,000,000 bushels will be needed next season. India—The monsoon was beneficial to crops, and prospects are now good. Prices, however, are high in anticipation of heavy shipments both this year and next. Holland—The weather is unfavorable. Australia—Beneficial rains have improved crop prospects. Argentine—Prospects continue favorable.

Consul-General H. B. Miller, of Yokohama, forwards a newspaper clipping which states that when all the flour mills in Japan are in operation large quantities of cotton-cloth bags will be required for packing flour and wheat.

Great Britain has withdrawn from the Brussels sugar conference.

The establishment of a new industry in Oceania has just been demonstrated by the receipt and sale at New York of 2,000 boxes of valencia raisins from Australia. During the fiscal year ending June 30 we imported raisins valued at $524,500, and exported raisins of domestic growth valued at $305,768, of which $68,445 went to Australia.

The fire loss of the United States and Canada in July, compiled by the *Journal of Commerce and Commercial Bulletin*, shows a total of $18,240,150. The following table gives a comparison by months of the losses this year, with 1905 and 1906:

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,054,000
February	25,591,000	18,240,350	19,876,600
March	14,751,400	18,727,750	20,559,700
April	11,901,350	292,501,150	21,925,900
May	12,736,250	16,512,850	16,286,300
June	11,789,800	13,950,650	14,765,000
July	13,175,250	12,428,050	18,240,150
Total seven months	106,323,150	390,093,600	135,717,650

Iron and steel exports and imports during the last fiscal year amounted to $222,118,736, 6.7 per cent. of the total foreign commerce of $3,288,975,381. This was divided as follows: $181,530,871 was exported, which formed 9.7 per cent. of the total exports of $1,854,553,956, and $40,587,865, or 2.7 per cent. of the total of $1,434,421,425, was imported. The progress that has been made over previous years in this line can be seen from the following:

	1907	1906	1905
Exports	$181,530,871	$160,984,985	$134,728,363
Imports	40,587,865	29,053,987	23,510,164
Total	222,118,736	192,038,972	158,238,527

This table shows the foreign trade of the United States carried in American and foreign vessels:

	In American vessels	*In foreign vessels*	*P.ct. in Am. vessels*	*By land vehicles*
1907	$132,620,870	$1,507,873,708	7 12	$207,271,288
1900	195,084,192	1,894,444,424	9.3	154,895,650
1890	202,451,086	1,371,116,744	12.9	73,571,263
1880	258,346,577	1,224,265,434	17.4	20,981,393
1870	352,969,401	638,927,488	35.6	....
1860	507,247,757	255,040,793	66.5	....

The following table shows the trade of the United States with Mexico, Central America and the Latin countries of South America and the West Indian islands in 1907, compared with 1897, in millions of dollars:

Countries	*Imports from* 1897	1907	*Exports to* 1897	1907
Mexico	18.5	57.2	23.4	66.2
Central America *	8.5	15.1	7.9	26.8
South America *	103.3	158.3	31.8	79.8
West Indies (Latin)	24.4	124.1	16.9	82.0
Total	154.7	354.7	80.0	254.8

*Trade with Panama in 1897 included with South America; in 1907 with Central America.

President J. T. Harahan of the Illinois Central looks for a continuance of good times.

Consul-General G. E. Anderson, of Rio de Janeiro, states that the increase in the trade of Brazil in 1907 promises to be far greater than that of any two previous years in the country's history. Enough is known of the first three months' imports of the country to state that they establish a record, while the increase in the exports for the first three months of 1907 amounted to $14,197,153, or about 23 per cent. increase over 1906. The respective figures for the two years, as given in the annual message of the President of the Republic to the Brazilian Congress and changed to dollars, with exchange at $4.85 to the pound sterling, are as follows:

Exports	*Three months* 1906	1907
Coffee	$20,756,083	$31,236,779
Rubber	25,202,055	25,943,547
Tobacco	1,606,669	2,251,942
Sugar	1,316,731	335,203
Herva matte	1,414,871	1,648 330
Cacao	1,752,344	1,755,094
Cotton	3,057,212	4,564,985
Other exports	6,896,501	8,523,739
Total	62,002,456	76,199,619

The vast bulk of the increase comes in the continued shipments of the coffee crop of the season now closing.

Professor F. E. Jaffa says in a bulletin prepared for the United States Department of Agriculture, that 10 cents' worth of peanuts contain more than twice the protein and six times the amount of energy contained in a porterhouse steak.

Beerbohm estimates the world's wheat crop as follows, in bushels:

	1907	1906	1905
Europe	1,616,000,000	1,862,000,000	1,862,000,000
Ex-Europe	1,494,000,000	1,682,000,000	1,519,000,000
Total world	3,110,000,000	3,544,000,000	3,381,000,000

The deficiency compared with last year is 434,000,000 bushels, and compared with two years ago, 271,000,000 bushels.

The London *Statist* places the European wheat crop at 1,616,000,000 bushels, compared with 1,862,000,000 bushels last year. Its estimate for the world was 3,100,000,000 bushels, as against 3,560,000,000 bushels in 1906. In this estimate it credited the United States with a shortage of 120,000,000 bushels and Canada with a shortage of 35,000,000 bushels. The European crop is said to be the smallest since 1897, and the import requirements are placed at 622,000,000 bushels.

The minister of agriculture of France has issued the following estimate of crop conditions there:

Winter wheat	*Aug.* 1, 1907	*Feb.* 1, 1907	*Aug.* 1, 1906
Good	40	51	23
Fair	44	30	64
Poor	..	1	..
Spring wheat	*Aug.* 1, 1907		*Aug.* 1, 1906
Good	20		17
Fair	24		33
Poor	..		..

The July statement of the British Board of Trade shows increases of £3,605,500 in imports, and £7,009,200 in exports. Principal increases in imports were £2,000,000 in raw matter, and £1,000,000 in food and manufactured articles. The main increases in exports were £5,500,000 in manufactured articles, and £1,000,000 in coal. From the returns, imported goods reëxported being omitted, the following comparative table of the United Kingdom's July trade in merchandise may be compiled:

	1907	1906	1905
Imports	£52,215,174	£48,609,674	£44,741,838
Exports	40,452,162	33,442,962	27,821,051
Excess imp	11,763,012	15,156,712	16,920,787

Excess of exports in July, 1904, was £16,173,019; 1903, £19,777,775; 1902, £18,057,790; 1901, £18,643,051; and in 1900, £15,713,610.

Financial.

The annual returns by the treasurers of the savings banks of New Hampshire to the board of bank commissioners show the largest total resources in the history of New Hampshire banks, amounting to $91,840,557 39. The total number of depositors June 30 was 183,243, an increase of 8,767, and the average amount due each depositor is $442.72. If distributed among the entire population of the state, the average deposit for each person would be $197.86. The amount of dividends paid during the year was $2,629,514, an increase of $220,573.

The Transvaal gold output in July is estimated by London Kaffir houses at 520,000 ounces fine, a gain of 13,000 ounces over June. Value of the July output, roughly, is $10,925,000, compared with $10,779,880 in June and $11,139,190 in May. Comparison of the value of last month's output with previous months, and with July in other years, is as follows:

July, 1907	$10,925,000	July, 1906	$20,445,020
June, 1907	10,779,880	July, 1905	8,909,720
May, 1907	11,139,190	July, 1904	6,538,105
April, 1907	11,405,500	July, 1903	5,344,585
March, 1907	11,436,950	July, 1902	3,168,370
February, 1907	10,482,170	July, 1901	551,345
January, 1907	11,418,705	July, 1900	Nil
December, 1906	11,684,850	July, 1899	8,557,335

Directors of the American Tobacco Company on Wednesday declared the regular quarterly dividend of 2½ per cent. on the common stock and an extra dividend of 7½ per cent. Three and six months ago 2½ per cent. regular and 5 per cent. were declared, and a year ago the rate was also 2½ regular and 5 extra.

The following is a statement of the condition of the savings banks of the state of New York on the morning of July 1, 1907, in comparison with July 1, 1906:

	1907	1906
Resources	$1,490,760,675	$1,414,444,492
Due depositors	$1,394,296,034	$1,335,093,053
Other liabilities	$721,434	$679,702
Surplus on market value of stocks and bonds	$95,743,206	$108,671,735
Surplus on par value stocks and bonds	$94,017,284	$88,172,898
Number of open accounts	2,742,808	2,637,235
Number of accounts opened or reopened	551,100	540,677
Number of accounts closed	447,525	417,067
Amount deposited	$399,770,401	$394,356,106
Amount withdrawn	$389,508,985	$356,910,221
Interest credited and paid	$48,940,923	$44,725,760

The New York State Board of Tax Commissioners announces that $4,950,248 was collected in taxes from the operation of the mortgage tax law for the year beginning July 1, 1906, and ending June 30, 1907, inclusive. The following shows the counties wherein the mortgage tax collected exceeded the sum of $20,000: New York, $2,903,086; Kings, $939,583; Queens, $206,757; Westchester, $150,820; Erie, $114,590; Nassau, $67,409; Monroe, $53,595; Onondaga, $48,421; Richmond, $40,896; Orange, $33,888; Suffolk, $29,762; Niagara, $23,799; Schenectady, $21,451; Albany, $21,564; Oneida, $21,085.

Industrial.

According to the *Iron Age*, the July output of coke and anthracite pig iron was 2,259,682 tons, which is 72,893 tons per day, as compared with 2,234,575 tons in June, at the rate of 74,486 tons per day. The steel works furnaces were chiefly responsible for this decline, the output having been 1,452,557 tons in July, compared with 1,457,230 tons in June. The industry entered the month of August with a capacity of 514,121 tons per week, as compared with 528,170 tons on July-1.

The shipments of anthracite coal in July were 5,602,435 tons, as compared with 4,981,448 tons in July of 1906. Shipments for seven months have been 38,487,030 tons, as against 30,367,249 tons in 1906. Shipments for July were the largest ever recorded in that month. The largest in any previous July was 5,377,495 tons, in 1903, which was occasioned by the scarcity of coal, which was noticeable for a year after the strike of 1902. The shipments of anthracite by months for four years have been as follows;

	1907	1906	1905	1904
January	5,249,946	5,458,084	4,408,578	4,134,245
February	4,563,720	4,712,099	3,922,601	4,326,269
March	5,230,813	5,707,167	5,258,567	4,375,033
April	5,916,583	488,203	5,278,041	5,407,786
May	5,999,272	3,254,230	6,005,158	5,185,079
June	5,024,260	5,676,018	5,844,052	5,728,705
July	5,602,435	4,981,448	4,546,743	4,623,227

The struggle of the Lithographic Artists', Engravers' and Designers' League with the National Association of Employing Lithographers, which began in August, 1906, has been ended as a result of the abandonment of the fight by the union. The trouble had its origin in the posting of open-shop notices by the employing lithographers in most of the larger cities of the country last August.

Railroads.

The *Journal de St. Petersburg* announces that a plan has just been laid before the Russian Ministerial Council for increasing railway traffic between 1908 and 1912. It is proposed to provide $455,000,000 in these three years, of which $150,000,000 will be for rolling stock, and $60,000,000 for the enlargement of shops and the construction of new ones. The remainder will be devoted to the construction of 4,500 versts of secondary railways, the laying of heavier rails, and the strengthening of bridges for the use of heavy locomotives.

Miscellaneous.

The legislatures of all but seven states convened this year in regular session. What the result has been may be fairly inferred from this compilation of bills offered and passed, made by the Dallas *News:*

	Introduced	*Passed*
Colorado	928	255
Illinois	1,400	240
Iowa	857	247
Indiana	1,134	123
Kansas	1,241	437
Minnesota	2,131	562
Missouri	1,489	280
Nebraska	1,004	221
North Dakota	686	299
Pennsylvania	2,107	773
Rhode Island	448	142
South Dakota	664	267
Tennessee	2,084	601
Texas	1,046	135
Utah	586	92
Washington	825	267

Legislative activity in New York, New Jersey and Wisconsin swells the total of bills introduced to about 23,000 and of laws enacted to about 7,500. All told, probably not far from 50,000 bills were presented in the various legislatures this year, about a third of which became laws.

More than 5 per cent. of all the United States pensioners whose pensions were paid at the Boston agency died during the year ending June 30, 1907, and it is assumed that this proportion held good throughout the country. Pensioners on rolls of the Boston agency at the beginning of the fiscal year, July 1, 1906, were 59,973, and on June 30, 1907, 59,236, showing a net loss of 737.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Cross currents in crop and trade developments render generalization difficult. Dispatches to BRADSTREET'S point to further favorable progress by leading crops, notably corn, cotton and spring wheat, but excepting oats, reports from which are not favorable. Ideal weather is reported for corn, except in parts of the southwest; advices from the spring-wheat section are better than for some time, and hot weather benefits cotton. Winter-wheat yields are also better than earlier indicated, but oats are turning out short and light. In the southwest, northwest and at large eastern centers sentiment as to fall trade has been helped by these developments, and fall buying is becoming more noticeable, as country merchants are coming in in increasing numbers. In some of the large industries, however, quieter trade is reported in some branches, with prices easing. Thus pig iron and some finished lines are reported lower on the week. Reports to BRADSTREET'S show less activity in current building. Demand for shoes, leather and lumber is of a midsummer character, and BRADSTREET'S price index number shows a drop of 1 per cent. for July. In textile trades the feature is the marked activity at strengthening prices for cotton goods, and the dress goods and silk markets are also better, but it is noted that sales of men's-wear woolens for the spring of 1908 are below those of the preceding season. At the same time, raw wool, especially the finer grades, is strong and active, with the new western clip well cleaned up. There is more talk of a recession in trade, present and prospective, in some lines, and the suspension of new railroad work at the south is a case in point; but it is noted, on the other hand, that sales of rails are larger, and some enterprises using this material, hitherto held up, are now being pushed. The feeling is that money is apt to be high, and shipments to the country for crop-moving purposes are larger. Stock speculation is more active but at the expense of values, which reflect unsettling national and state action against industrial and transportation interests. Bank clearings returns are irregular. New York City shows a good loss from a year ago, but outside of the metropolis gains over last year are quite general. Railway earnings for July show heavy gains, and net returns for some leading systems in the second quarter of the year are far better than in the first three months of 1907. For the week the price movement is likewise irregular. Thus cotton is higher on heavy short covering, with futures at the highest of the year, and oats are 1 to 2 cents up on less satisfactory crop advices, but wheat is 3 to 4 cents lower at all markets on expectation of better yields than earlier looked for and some liquidation by tired bulls. Rather better export inquiry was noted at the decline. Corn is steady.

Crop reports to BRADSTREET'S are generally indicative of steady improvement. Briefly summarized, they say that the weather is ideal for corn, except in the southwest; that cotton is gaining steadily, being helped, instead of hindered, by high temperatures, and that there has been no real damage to spring wheat from rust in the northwest. Winter-wheat threshings are turning out better than earlier expected in most states, and a bumper crop is indicated in eastern Washington. Spring-wheat reports from the northwest also are better than seemed possible a month ago. Except in Texas and the southwest, where dry weather has hurt corn, that crop is making rapid headway. All state reports as of August 1 indicated improvement, foreshadowing a more favorable report by the national Department of Agriculture. Reports as to oats constitute a really serious exception to the otherwise quite favorable tendency. Threshings of this cereal indicate light yields of lightweight grain. Western tobacco crop reports are better, and the hay crop will be a large one This is especially encouraging, because prices of this feeding stuff are very high. The potato crop in Aroostook county, Maine, promises well on an increased acreage. Virginia tobacco has improved. No complaint has yet come from cotton in Texas, despite the high temperatures. Indeed, the heat is said to have arrested the work of the boll weevil. From the New Orleans district comes the report that the tendency there is to increase estimates of yield. An average crop is indicated in Arkansas; a large yield is looked for in Alabama, though too much rain is reported in the southern part of that state and in Florida. A bumper cotton crop is indicated in Georgia, and the reports from the Carolinas are also very good. A large crop of hops is indicated in Oregon.

The quieting down of demand in several lines of industry, due to midsummer influences, lessened consumption or other causes, as well as to improved crop conditions, is reflected in the downward drift of staple prices shown by BRADSTREET'S approximate index number, which on August 1 was $8.9277, a decline of 1.2 per cent. from July 1, and of 2.2 per cent. from the high level of the year touched on March 1. Compared with a year ago on August 1 the price level is 7 per cent. higher, and the increase over February 1, 1900, is 8.4 per cent. Compared with the low level of July 1, 1896, prices are 56 per cent. higher, but the advance over January 1, 1892, is only 9.6 per cent. Metals, vegetable oils, fruits and hides and leather showed most weakness, while textiles, notably cotton goods, were strongest. Better crop prospects caused lower prices for many farm products, while lessened demand was especially reflected in copper, lead, iron and tin.

Visible wheat supplies in both America and Europe declined during the month of July. United States and Canadian stocks on August 1 aggregated 63,663,000 bushels, a decrease of 1,887,000 bushels from July 1, while European stocks on August 1 aggregated 59,300,000 bushels, a decrease of 12,000,000 from July 1. The total world's stock August 1 was 123,000,000 bushels, a decrease of 13,800,000 bushels from July 1, but an increase of 14,600,000 bushels over August 1 a year ago and 30,000,000 bushels over the same date in 1905.

The New York securities market is nervous and variable at a moderate recovery from the general and severe decline started this week by the Standard Oil fine and other developments emphasizing the strength of the anti-corporation agitation. Investment buying is checked, and support comes mainly from covering of short sales. Foreign exchange is heavy at 4.86.30 for demand sterling, but $500,000 gold was shipped to Holland early in the week as a "special" arrangement.

Wool is strong in price and active in demand. Fine clothing and worsted wools are especially called for. Large sales to arrive are reported. The new clip at the west is reported well cleaned up. The clip is estimated to be 10 per cent. short of that of 1905, owing to the severe winter.

Refined sugar is dull and stocks in distributers' hands are large. Raw sugar is quiet and rather easier, though not quotably lower. Smaller yields of American and European beet and of Cuban cane crops are indicated, while the prospects are for a larger Louisiana crop. Prices of coffee futures have declined despite poor crop reports from Brazil.

Pig-iron markets are weak and very quiet, though there is a little business being done in the east at concessions in prices. Iron for prompt shipment is in better supply. Production in July exceeded that of June by about 1 per cent., but the daily output fell below the similar figures for the preceding month. The labor disturbances on the iron ranges are practically over, and production and shipments will soon assume normal proportions. Bessemer billets, forging billets and wire rods are weaker at Pittsburgh, although business in the first-named product is better. Steel rails are in relatively good demand, considering the volume of orders placed earlier in the year; new business amounts to about 40,000 tons. Demand for plates continues strong, car builders and shipyards being the principal factors. In the west specifications for structural material are coming in quite fully, but new business is quiet. Wire, tubes and sheets are in good request. Old material is in heavy supply and prices are lower. Scarcity of labor curtails the output of coke, and this, coupled with a slightly better demand, causes more firmness in prices. Bituminous coal, which had been firm in the west, is now lower, owing to overproduction. Copper, tin, spelter and antimony are lower, and business continues quiet. Although copper has finally worked below 20 cents, many in the metal trade look for still lower prices.

Bank clearings for the week ending August 8 aggregate $2,658,741,000, 5.8 per cent. over last week, but 1 per cent. under this week last year. Outside of New York exchanges amount to $1,049,301,000, 4 per cent. over last week and 12 per cent over the week last year.

Business failures for the week ending August 8 number 157, against 142 last week, 137 in the like week of 1906, 166 in 1905, 167 in 1904 and 160 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending August 8 aggregated 3,272,993 bushels, against 2,739,836 bushels last week, 2,262,961 bushels this week last year and 8,831,199 bushels in 1901. For the first six weeks of the fiscal year the exports are 15,963,760 bushels, against 12,100,271 bushels in 1906-07 and 36,294,784 bushels in 1901-02. Corn exports for the week are 1,107,621 bushels, against 1,608,121 bushels last week and 1,292,638 bushels in 1906. For the fiscal year to date the exports are 9,270,232 bushels, against 4,578,337 bushels in 1906-07.

IN CANADA.

There are no signs of hesitation in Canadian trade demands, and the only apparent drawback is the exceptionally strong and active money market. Loans increased heavily in the first half of the year, but this appears to have been altogether in commercial lines, as call loans fell off, owing to the paucity of stock speculation. Increased activity is noted in fall trade at leading centers, and crop reports continue to show improvement. There is still complaint that deliveries on orders are slow. Underwear mills are reported to have all the orders they can handle, and the hardware trade outlook throughout the country is very good. Groceries are active at Montreal, and shoe houses are getting good orders. Collections at that city are fair to good. Toronto reports good crop conditions in Ontario, where harvesting has begun. Dry goods are in brisk demand and a large millinery trade is looked for. Winnipeg reports some improvement in collections, but these are still slow in spots. Special efforts are making to prevent a coal famine this winter. Industry is active in British Columbia, hardware is in brisk demand, grocery shipments to the interior are heavy, and export trade to Asia is increasing. Clearings for the week aggregate $80,715,000, a gain of 8 per cent. over last week and of 13.4 per cent. over this week a year ago. Failures number 18, as against 16 last week and 19 in this week a year ago.

TRADE REPORTS.

Following the general tendency in other lines of cotton goods, linings are on the up-grade, several makes having recently advanced, and in the low grades new prices in some instances have been made during the week. Cotton yarns continue in active demand, but deliveries, except to fill orders placed far in advance, are difficult to obtain. Woolen and worsted yarns are also in good demand, but continue high in price and have an upward tendency. Manufacturers of cloaks, suits and waists report business brisk and collections good, and the number of orders for cloaks and suits already placed indicates a good fall business. Woolen and cotton rags continue in poor request. Prominent manufacturers of men's shirts, neckwear and gloves are busy on fall orders and say they have all they can fill for the next three months. Jobbers of hosiery and knit goods also report receiving liberal orders. Conditions in the wholesale notion trade are good, orders are plentiful and a general feeling of confidence appears to be felt by the trade. Business with wholesale grocers is quiet, though out-of-town buying is fairly liberal. Local sales and collections are slow. Flour receivers say trade is waiting, jobbers hold full supplies, millers will not make concessions and consumers object to paying more money; wheat crop developments will settle the issue. The market for butter and cheese is firm; home demand absorbs all that is offered. Receipts of eggs are now of only moderate proportion. Cotton cordage continues in request, and higher prices are asked for both rope and wick than two weeks ago. Jute cordage continues in excellent demand, prices being firm and unchanged. In the metal market pig iron is quiet, with a tendency to lower prices. Pig tin is also lower, and a fall in pig lead is anticipated. Structural steel is in fair demand. Copper is weak and unsettled. Cigar fillers are much inquired for, though prices are still high, and Sumatra and Havana tobacco are in active demand. Drugs and chemicals are unchanged, with the exception of attar of roses and morphine, which are dearer. In the paper trade there is a seasonable demand, better than the average, and there is more activity in book paper, which recently was somewhat quiet.

The following telegrams show trade conditions at the cities mentioned for the week ending August 9:

BOSTON.—In jobbing dry goods there is still some store trade being transacted in current season goods, retailers buying to meet immediate wants or to obtain lots to be disposed of in clearance sales. Trade at retail has for weeks past been active and of good volume. Cotton fabrics have been advancing to an extraordinary level and demand continues without check, sales being effected with less difficulty than when the range of prices was 25 per cent. lower. Bleached goods, print cloths and heavy cottons are especially strong. Dress goods for fall are becoming more active in demand from jobbers and manufacturers, who are getting orders from outside the nearby retail trade. Broadcloths are showing exceptional strength. Jobbing men's furnishing goods houses are doing larger business than a year ago. Shoe shipments are shrinking, as shown by the following figures: Last week, 91,820 cases; preceding week, 98,558; last year, 109,310; total for 1907, 2,922,282; total for 1906, 3,058,629; decrease, 136,347. For both grain and wood alcohol a satisfactory demand is noted. Chemicals are in moderate call. No increased activity in dyestuffs and tanning materials is apparent. In northern and eastern lumber the general tone of the market is better, orders coming in more freely, with prices generally steady. Southern lumber is in fair demand, while in western lumber and hardwood the situation has not materially changed, business being quiet. Paints, oils and other supplies in that line are in brisk demand. Cement and building supplies are quiet, with no marked change in prices. Iron and metals are not very active. Trade in beef provisions is much curtailed, due in a large measure to prevailing high quotations. Eggs continue firm and the supply of the best grades is small. Wholesale liquor dealers report fair trade, considering the season. Collections are fair to good. Leaf tobacco continues steady and without change. Manufacturers are busy.

PROVIDENCE.—General business is active for this season of the year and collections are fair. Manufacturers report worsted goods opening well for the next season, but there seems to be little, if any, improvement in woolens. Cotton goods are firm in demand and sold well ahead.

PORTLAND, ME.—Railroad travel and business at summer resorts during July was somewhat disappointing and not as large as last year. Prospects for August, however, are good. Haying is very late, and only about half the crop thus far has been secured, owing to very unfavorable weather. The Aroostook county potato crop promises fair, with a small increase in acreage over last year.

PHILADELPHIA.—Wool is quiet, with prices firm. Manufacturers are supplied well ahead and new business is slow. This applies as well to cotton goods. Dry-goods and notion jobbers report little local trade, but salesmen are sending in good orders for future delivery. Retail business is dull. The advanced prices of textiles have checked sales in chemicals and dyestuffs, white goods being more in use. Dyestuffs are quiet, with trade probably 20 per cent. less than normal. Chemicals are quite as slow, but there has been no radical decline in prices. Some few who contracted ahead for expected requirements are shading prices to reduce their holdings. Paints are selling freely, 10 to 15 per cent. more than is ordinarily bought at this season. Prices on lead and linseed oil hold steadily the advance made about the first of this year. Glass sales are about normal. Collections are slow, as work is from four to six weeks behind because of poor weather last spring. In lumber, poplar, bass and white oak are more freely bought. Railroad construction is at a standstill, which affects sales of yellow pine. The general market, off for July, shows signs of recovering this month. Certainly the general tone is better, though prices are shaded on some lines. Collections are very poor. Hides and skins are slightly weaker, with demand quiet and supply full. Goatskins continue weak on quiet demand and full supply. Glazed kid continues dull. Leather shows no change, demand being fair, supply good and prices remaining about same. Boot and shoe dealers report a fair business, with no appreciable change in prices. Havana tobacco is selling somewhat better, and out-of-town buyers are taking Sumatra more freely, realizing that prices are not declining. Local cigar manufacturers are not so busy and sales to them are light. Prices hold steady. Liquors are in light demand. Iron and steel trading is small. Coal is quiet.

BUFFALO.—Trade in general appears to be increasing, both wholesale and retail, especially in boots and shoes, dry goods, groceries and clothing. The hardware and iron industries appear active, and while some report collections somewhat slow, others state that they are prompt.

BALTIMORE.—Buyers in fair numbers are in from Alabama, Florida, Georgia and South Carolina and purchasing in usual quantities. City retail trade is going through the period of summer dullness. Clothing manufacturers are shipping fall goods and report a slight improvement in collections. Shoe jobbers report sales and shipments about normal and collections somewhat better. Millinery jobbers are preparing for fall trade, the outlook for which is unusually good, and an increased number of buyers are expected by way of the Jamestown Exposition. Some few early buyers have arrived; collections are fair. Trading in paper at wholesale is quiet, with advances in the cheaper grades, and the better grades holding firm. In cabinet hardware and upholstery goods, business is quiet; prices are firm. Lumber is quiet, with sales few and prices fair. The plan of the North and South Carolina mill operators to curtail output for thirty to sixty days is favorably regarded here, as local stocks are rather full and prices on some grades have decreased from 50 cents to $1 during the past two months. Drug jobbers report fairly good business and collections showing slight improvement. Money rates continue firm at 6 per cent., with supplies well taken. General deposits do not reach those of the same period of 1906. A number of firms are availing themselves of increased discounts offered by out-of-town supply sources, and have accordingly drawn on their accommodation at bank at a period earlier than heretofore. No immediate easement is looked for by local bankers.

CINCINNATI.—Wholesale business is without animation. Retail trade is above the average. Manufacturers are busy. Corn and tobacco continue to improve under favorable weather conditions. Wheat now being threshed is of good weight and quality, with the yield averaging 20 to 22 bushels per acre. Oats are disappointing.

CHICAGO.—Corn has made good progress over the entire belt, but the stand continues irregular. There is some damage by hot, dry weather in Texas and Oklahoma and a little in a small section in Kansas. State reports show gains of 3 to 10 points, Iowa improving from 76 to 79 in July and comparing with 99 last year. It will take the best of weather to bring the crop up to last year's aggregate, and frost will have to be later than usual. Spring wheat has generally improved. The black rust scare is practically over, and damage has been slight. There is some red rust, but not enough to be important. Cutting is general of all grains in southern Minnesota and South Dakota. Yields of winter wheat are not materially changed. Oats are a short crop in the leading sections, and quality is much below the average. Threshing returns indicate yields ranging from ten to thirty-five bushels to the acre, with the majority ranging between twenty to twenty-five bushels weighing twenty-two to twenty-eight pounds, more being under than over the latter figures. The yield will be much lighter than last year. Haying has progressed favorably and the yields are generally heavy. Other crops have made good progress. A cheerful feeling in trade circles results from more favorable crop reports and higher prices for wheat and the coarse grains compared with last year. Consumption is large and sales show an increase in dry goods, steel and iron. Finished steel in some instances has sold the best in over a month, and for bars and agricultural shapes the sales have been the best in recent years at this period. Good contracts for structural material, plates, rods and rails have been taken. Sales of rails are 15,000 tons. Light rails are in active request at full prices. Southern pig iron sells at $1 decline, but northern irons are unchanged. Buying of wire and nails has been 1,000 tons ahead of last year for the past seven months. Increased production of bituminous coal has made an easier market with more pressure on the part of producers to sell. Lumber is meeting a fair sale, with prices showing little change. Dry goods have met with an increased call from far-away buyers and shipments on forward orders increased steadily. All other lines show fair activity for this season. Butter and eggs have advanced and potatoes declined. Cattle, sheep and lambs average higher, while hogs are lower. Receipts of hogs and cattle increased and sheep decreased. Money is firm. Deposits have decreased. Currency shipments are increasing.

PEORIA.—Trade shows the usual midsummer dullness, but compares favorably with the same time a year ago. Collections, as a rule, are somewhat slow.

INDIANAPOLIS.—The opinion is now held in responsible quarters that wheat in Indiana, now all harvested, will not come quite up to the average in either yield or quality. Oats will only be fair. Corn is coming along nicely, the weather being ideal for its growth. Clover is in good condition. In live stock business is booming and it will be excellent for the next three months. Collections are fair. The lumber trade reports business just fair and prospects for the immediate future only fair. Collections are reasonably good.

TERRE HAUTE.—Wheat has been damaged by wet weather, and threshing in some quarters has been retarded. Hay also has suffered. The berry crop is largest in years.

LOUISVILLE.—Business in dry goods, clothing and shoes is quiet. Drugs and groceries are active and dealers report a good demand. Whiskey is seasonably quiet, but prices are firm. Collections have improved.

ST. LOUIS.—Quite a large delegation of country merchants, principally from Texas and Indian Territory, are in the city. Their purchases thus far are normal, but a better class of merchandise is being bought. Millinery jobbers report a good number of buyers from Arkansas; their purchases have been liberal and of the finer grades. Furniture, carpets and house furnishings are quiet. Clothing shows an increase in sales over the same period last year. Manufacturers of overalls and ladies' skirts are somewhat handicapped on account of the scarcity of experienced help. The same condition prevails in the manufacture of fine shoes, and as a result many orders placed in May and June have been cancelled. Groceries and canned goods show a good volume of business; while the orders are not so large as heretofore at this season of the year, the increased prices make up the difference. Drugs, paints, oils and glass are especially active at firm prices. Lumber shows a decided falling off in volume of business at lower prices. Hardware, shelf and heavy, continues active at firm prices, which have an upward trend. Manufacturers of and jobbers in jewelry report a satisfactory volume of business at good prices. Retail trade in some lines shows a tendency to drag, but among department stores cut-rate clearance sales have caused summer stocks to be greatly reduced. Collections in general range from fair to good. Money is firm and the demand is good. Weather conditions continue favorable to growing crops. Corn is doing nicely and a large yield is assured.

ST. JOSEPH.—The condition of corn over this entire territory is good and prospects equal those of last year.

KANSAS CITY.—Wholesale and retail trade is better than usual for this time of year. There is a heavy demand for fabrics. Prices are high and goods are scarce. Collections are good. There is a heavy demand for money to move crops. There is an unprecedented amount of wheat in local elevators. Crop conditions are good, light rains and warm weather being of benefit to crops.

WICHITA.—The wheat yield in Kansas is about 40,000,000 bushels, and the quality is good. Ideal corn weather prevails, hot and rainy. Business in all lines is good. Collections are fair. Building is active.

MILWAUKEE.—Trade appears satisfactory, although some lines are experiencing the usual midsummer relaxation. Collections are fair.

SIOUX CITY.—Trade is good in all lines and collections are good. Harvesting is half done with good yields. Corn is growing well, and with a normal season will have a good crop; no rain is needed. The hay crop is large.

DAVENPORT.—Trade continues fair, and in most cases equals last year's. Collections are somewhat slow. The weather is favorable for corn. Reports as to yield of barley and oats are not very flattering.

ST. PAUL.—Business continues active in all lines, and the way orders are coming in is the best index as to the crop prospect. Collections have been quite good for the season, and to date they are as good as last year. Crop conditions have improved wonderfully during the last three weeks, and in places where all hope of a crop was given up there will be half a crop; but there are spots where the entire crop was ruined. Harvest will extend to September 10, and frost is feared. Crop estimates on all grains vary considerably, even in the same localities. In Minnesota the yields will not be large, but all will do well, except wheat and corn. Hail damage in southern Minnesota was considerable.

MINNEAPOLIS.—General business is satisfactory in all lines and some are finding it much in excess of last year. The outlook for fall trade is quite promising. Collections are good for the season. The amount of building in progess is greater than a year ago and materials are in strong demand. Flour is quiet, but the future is promising. The crop situation is quite encouraging. Recent weather conditions have been favorable and while rains have been too abundant in some localities, the general result is good. All grains are coming on finely and harvesting will commence in real earnest very soon.

OMAHA.—Business, wholesale and retail, is normal. Collections are fair. Corn is making rapid headway. Threshing is in progress and some wheat is being marketed. Quality and quantity are much better than expected. Oats are of light weight.

LINCOLN.—Collections are fair.

CHARLESTON.—Wholesale dealers in dry goods, clothing and boots and shoes report heavy shipments of fall goods. Retail trade is good. Cotton is in excellent shape and a good crop is anticipated. Collections are reasonable.

RICHMOND.—Wholesale dealers in dry goods and notions are receiving satisfactory orders, but the volume of business is not altogether as large as expected, owing partly to slow collections and late tobacco and cotton crops. These conditions are also true of a number of other staple lines. In southern Virginia and North Carolina advance sales of the new crop of tobacco are noted, and prices received have been good, considering the quality. Cotton shows improvement, and with continued favorable weather growers anticipate an average crop. Retail trade is fair; collections are not good.

SAVANNAH.—The cotton crop presents a very promising appearance, and a bumper crop in Georgia is predicted.

AUGUSTA.—Retail trade is fair and wholesale is improving. Cotton is in healthy condition and the weather is favorable.

ATLANTA.—The agitation caused by the passage of the total prohibition bill has about subsided. Retail trade is improving and building continues active. Wholesalers report prospects encouraging, but complain of collections being slow. Cotton continues to gain rapidly and weather conditions are favorable.

MACON.—Crops are improving under seasonable weather. Collections are good for the season.

JACKSONVILLE.—Trade is up to the standard for the summer period. Collections continue slow. Some reduction of work in sawmills and on railroads is reported. Crops are good, with rain in excess.

BIRMINGHAM.—Southern foundry pig iron No. 2 is not quite so active and is quoted at $21.50. Trade in general has declined a little. Collections are slow. Crops have improved. Lumber is not very brisk.

MOBILE.—The condition of crops is good, but if heavy rains continue long, as they have for the past week, cotton will begin to shed. Trade continues fairly active in all lines, with collections somewhat slow. Longshoremen are on strike, but no serious inconvenience to shipping has occurred as yet. There is no indication of an early improvement in the yellow pine market, and orders are refused in many cases at prices offered. Demand for export timber is sluggish.

MONTGOMERY.—Trade in all lines continues dull. Collections are slow. Favorable weather continues and cotton is developing rapidly. Prospects are good for large crops.

CHATTANOOGA.—Retail stores have held clearance sales during the past week, and a good volume of trade is reported. Jobbers report trade fairly good. Collections are good.

MEMPHIS.—Retail trade is quiet and wholesale is gradually improving Collections are slow. Weather conditions are favorable. Corn and cotton are making good progress.

LITTLE ROCK.—Trade in practically all lines holds up well, and preparations are being made for an extensive fall business. Collections are comparatively good. The summer months have been too dry for corn, and only about two-thirds of a normal crop will be raised. Cotton is doing nicely, and with a late fall an average crop is expected.

NEW ORLEANS.—Retail and jobbing trades are experiencing the usual midsummer dullness, but a good fall business is anticipated. Crops are all doing well, and present conditions are prompting those who are in close touch with cotton to increase their estimates.

FORT WORTH.—Hot, dry weather has helped cotton a great deal during the past two weeks. There are very few complaints of insects and the outlook is good. Trade is a little quiet and collections are lagging.

DALLAS.—Dry, hot weather continues throughout this section and cotton conditions are improving, but rain would be beneficial to corn. Collections continue slow.

WACO.—Trade is fairly active, but collections are slow. Continued hot and dry weather is favorable to cotton, preventing any great damage by boll weevil. Corn is about ready for market.

SAN FRANCISCO.—Business shows some improvement, due chiefly to confidence felt in the new local government. Collections are slow.

SEATTLE.—Trade continues satisfactory. Collections are improving.

SPOKANE.—The harvest is under way, and reports indicate a bumper crop of wheat. Wholesalers are enjoying a good trade and fair collections.

TACOMA.—Trade is up to expectations. Building continues fairly active. Collections are fair.

PORTLAND, ORE.—Light showers over the northwest will benefit all growing crops, including spring sown wheat, and unless continued too long will not harm fall wheat now being harvested. A good hop crop is assured. Trade continues good and building is active. Collections are good.

TORONTO.—Trade is satisfactory. Fall business is better all around and very heavy demands are reported for all lines of goods. Prospects are generally very satisfactory. Ontario crops are good. Harvesting has already begun in some districts. Grains show up well, but in many sections hay and straw crops are light. The improved condition of western crops gives hope for excellent trade. Eastern and Ontario collections are fairly good, while those from the west are still slow. Dry-goods houses report brisk fall trade. Mills are making great attempts to keep up with orders, but there is much delay, and in some lines orders will not be entirely filled. Preparations are active for fall millinery trade at the end of this month. Orders are even now coming along well. Values in all lines are very firm. The grocery trade is beginning to show increased activity. It is generally felt here that although grocery prices are high, there is no grave

danger of marked declines. It is not thought, however, that the time favors speculative buying. There is a fairly good tone to hardware. A big trade is expected to open out early in the fall. Values are steady to firm. Pig iron is quiet and easier. Arrivals of wools are light and the market is firm. Hides are dull and easier.

MONTREAL.—In view of the strength at present existing in the Canadian money market, the statement of the chartered banks showing the business done during the past six months is particularly interesting. It is evident that demand for capital is very active. Current loans in Canada have during that time increased by very nearly $36,000,000. There has been very little change in the amount on loan outside of Canada. Call loans in Canada have declined owing to the quiet which has ruled on Canadian exchanges. There has lately been a good increase in deposits on demand. Circulation also shows a good increase. All branches of trade report great activity. Wholesale stocks are moving rapidly, and the outlook for fall and winter trade looks excellent. The retail dry-goods trade is reported fairly active. Some retailers are making efforts to dispose of light summer lines, which are rather heavy in stock, owing to the slowness with which the season opened. Manufacturers' shipments of textiles are still slow and values are firm. Underwear mills are reported to have all the orders they will take, and a big fall and winter business is being done. Cottons are firm, with deliveries slow. Hardware trade is good. Prices are steady to firm. The outlook for this trade, both east and west, is good. Groceries are active. Dried fruits and canned goods are firm. Boot and shoe factories are just getting into the swing of fall work. Travelers report a good business, and prices are steady. Hides and leather are about steady, with a light business. Country trade is fair. Collections are fair to good.

VANCOUVER-VICTORIA.—There is an excellent tone to trade. Wholesalers report brisk demand for goods. This is due to the industrial activity, which is general. Dry goods are moving well and prospects favor a good fall business. All lines of hardware are brisk. Large shipments of groceries are being made to the interior. Export trade continues to grow, and business with the Orient is increasing.

WINNIPEG.—Crops show improvement, and this has had a good effect upon fall trade. Retail trade here and in the surrounding country is reported as fairly brisk, and collections show some improvement. Wholesale stocks are now moving well, but manufacturers' shipments are still slow in arriving. Some fears are expressed of another coal shortage in the west the coming winter. Farmers will this year need much help to harvest the grain.

Money Market.

Loan-market conditions at New York were influenced this week not only by the disturbed state of the stock market, but by the appearance of a more active demand for money at the interior. Considerable transfers of funds were made to Chicago and to San Francisco, and it is stated that institutions at other cities which had money loaned in Wall street are drawing it in. There was also a shipment of $500,000 gold to Holland, which, however, as explained elsewhere, was a special arrangement. On the total movement for the week the banks are estimated to have lost $1,000,000. With the decrease of supplies there was a sharp rise in time money rates, the principal inquiry being for six to seven months, or, as they are termed, "over the year" arrangements. The quotations for that class of loans have been 6½ per cent. on mixed collateral, and 7 per cent. was asked in most cases for loans on industrial collateral. Short-term loans also felt the tendency, and 5¾@5½ were the figures for three months' money, the offerings being, however, fairly liberal. Call money was plentiful, though it advanced temporarily on Wednesday to 6 per cent. in consequence of the stock-market break. Renewals on that day, and, in fact, early in the week, remained, however, as a rule, at 3 per cent. to 2½ per cent, rising to 4½ per cent. on Friday. In commercial paper there is continued inactivity, local institutions being out of the market, while the current rates are firmly held at 6½@6 per cent. for double names.

New York Banks.

While the estimated actual loss in money by the banks last week was put at nearly $4,000,000, the decrease in average loss of cash displayed by the Clearing House statement of the 3d instant was only $903,100. The discrepancy was possibly due to the effects of the August 1 interest and dividend payments and unreported shiftings of balances from other institutions to the banks in connection therewith. The increase of $3,787,000 in the item of loans was considered to reflect in part the operations of the week before, as it was known that a good many borrowings from the banks had been replaced by foreign loans. The increase in the deposits, amounting to $3,529,500, was fairly in agreement with the changes in loans and cash, and the reserve required was only $882,375 larger, so that the surplus reserve decreased $1,785,475. The following compares the figures of the statement with those of the preceding week:

	Aug. 3	July 27	Changes
Loans	$1,126,950,700	$1,123,163,700	I. $3,787,000
Specie	210,339,700	210,451,500	D. 111,800

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending August 8 shows an aggregate of $2,658,741,000, as against $2,510,001,000 last week and $2,695,986,000 in the corresponding week last year. Canadian clearings for the week aggregate $80,715,000, as against $74,419,000 last week and $71,129,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	August 8	Inc.	Dec.	August 1
New York	$1,609,439,000	....	8.6	$1,508,716,000
Chicago	225,717,000	14.5	....	223,427,000

Foreign Exchange.

At the beginning of the present week foreign exchange was inclined to show strength on a fair inquiry for remittances and restricted supply of commercial bills. Actual rates, however, did not advance sufficiently to render gold exports to Paris feasible, and considerable surprise was expressed at the announcement that $500,000 gold had been engaged for shipment to Amsterdam. This unusual transaction, like the one which occurred some weeks ago, and which involved the transfer of $1,000,000 gold to Holland, was declared to be a "special" arrangement, and to have, in fact, been arranged some time back. As the week progressed the exchange situation was affected by the events transpiring in the New York securities market. On the break in stock prices foreigners were liberal buyers, and this brought a considerable amount of bills into the market. There was also some renewed offering of foreign loan bills, and under the pressure from these sources rates declined sharply, actual demand falling to 4.86.35, while long sterling broke to 4.82.75, being influenced by higher discount rates at London.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Aug. 3	Aug. 5	Aug. 6	Aug. 7	Aug. 8	Aug. 9
4.84 @ 4.87½	4.84 @ 4.87½	4.84 @ 4.87½	4.84 @ 4.87½	4.84 @ 4.87½	4.84 @ 4.87½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87.10; commercial bills, 4.82@4.83; francs, 5.20 less 3-32 @5.16⅞ less 3-32; reichsmarks, 94 3-16@95 1-16 less 1-32.

The Bank of England's discount rate is unchanged at 4½ per cent. It reported for the week ending Thursday a loss of £777,214 in gold, and its proportion of reserve rose from 46.74 per cent. to 46.90 per cent. A feature of the statement was the reduction of the loans by £877,000. In the London open market call money is 2½ per cent. and discount higher at 4 per cent. The Bank of France this week reported a gain of only 100,000 francs in gold. Its rate continues to be 3½ per cent., the Paris market quotation for discount being 3⅛ per cent. At Berlin the bank rate is still 5½ per cent. and the market 4⅜ per cent.

New York Securities Market.

Wall street's response to the imposition of the enormous fine of $29,240,000 upon the Standard Oil Company in the rebate case took the form of an outbreak of liquidation and aggressive short selling by professional operators. It was argued in some quarters that the certainty of an appeal from Judge Landis's decision and the long delay which is sure to occur, together with the chance for a reversal or modification in the higher tribunals, render the matter of less moment than it seems on its face. Coupled, however, as the judge's action was, by an announcement that immediate steps were to be taken to prosecute the Chicago & Alton Railway and its officials for granting rebates, and in view of the further developments of the early part of the week, which included complications between the Southern Railway and the state of Alabama and between the Rock Island and the state of Arkansas, to say nothing of reports that additional prosecutions of trusts and railroads are to be instituted by the federal authorities, a real feeling of apprehension made its appearance in financial and investment circles. Of this, the bear contingent in the stock market was not slow to take advantage. Monday's market exhibited, however, only moderate depression in Union Pacific, as well as in St. Paul, Amalgamated Copper and the distinctively Standard Oil stocks, the rest of the list showing irregular weakness. It was noted that a good deal of the selling was in such large blocks as to create the suspicion that some important interests were liquidating. In fact, a variety of rumors were circulated about the attitude of certain prominent people, who were credited with either ranging themselves on the bear side or of letting go of their holdings. By Tuesday the bearish feeling seemed to have become general, and there was ample evidence that this, together with the recessions in prices and the consequent weakening of speculative accounts, had brought about an enormous selling of stocks by commission houses. The downward movement accordingly assumed a somewhat violent form, and

this was continued on Wednesday. It was noted that not only was the support which the leading banking and other interests are accustomed to extend under such conditions entirely absent, but that the bargain-hunting buying by investors which substantial recessions in values ordinarily arouses failed to show its presence to any extent. It cannot be said that the market was demoralized. There was, in fact, no disposition to circulate reports about trouble in connection with houses or individuals. Prices simply went down on heavy offerings, and the rallies for a time represented nothing but the momentary covering of shorts by the bears who desired to secure their profits. The dealings and interest were distributed throughout in the Harriman group, the issues with which the Standard Oil people are popularly thought to be identified, especially Amalgamated Copper, and the Hill stocks, together with Reading and American Smelting. At the opening on Thursday there was an additional general decline in which a number of the active issues touched the lowest figures of the movement, but about noon on that day there was an appearance of renewed support, especially in the United States Steel stocks, which had been relatively steady, the buying coming apparently from interests connected with that property. This led to heavy covering by the shorts, and the market rallied, closing, in fact, at a considerable recovery. On Friday the market was irregular, with concessions from the improvement, due in part to the weakness of securities in London.

The hardening of money rates, referred to elsewhere, did not seem to figure among the bearish factors of the week, though it was generally recognized that the annual call for funds at the interior is now here and that high quotations for loans will prevail from now on. The declaration of the regular 2½ per cent. dividend for the quarter on Union Pacific, which was announced on Thursday, was regarded with satisfaction, although it was fully expected. Among the incidents of the week was the decline of Standard Oil in the curb market from 500 to 476¼ on comparatively small sales. The local traction stocks were weak under the lead of Interborough-Metropolitan, as a result of the latter's investigation by the Public Utilities Commission. Canadian Pacific attracted attention by breaking sharply on Friday in consequence of free selling of the stock in London.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Wheat and Flour Exports.

[Special to BRADSTREET'S.]

The quantity of wheat (including flour as wheat) exported from United States and Canadian ports for the week ending with Thursday compares as follows, in bushels:

Week ending	1907	1906	1905
July 4	2,098,904	1,745,343	1,050,644
July 11	3,264,714	1,952,273	1,903,304
July 18	2,210,770	1,535,967	705,329
July 25	2,376,543	1,708,705	864,146
August 1	2,730,836	2,895,020	1,041,696
August 8	3,272,993	2,262,961	865,002
Largest exports in 1907, week ending June 6			5,263,138
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Corn Exports, in Bushels.

[Special to BRADSTREET'S.]

Week ending	1907	1906	1905
July 4	1,410,804	691,600	932,225
July 11	1,411,675	594,718	834,772
July 18	2,066,967	837,162	1,193,470
July 25	1,665,944	539,073	773,621
August 1	1,608,121	623,146	1,013,675
August 8	1,107,621	1,202,638	1,152,441
Largest exports in 1907, week ending February 1			3,360,456
Smallest exports in 1907, week ending June 14			783,455
Largest ever recorded, week ending Feb. 1, 1906			8,289,359
Smallest ever recorded, week ending Sept. 1, 1902			21,196

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending August 1, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	259,147	237,934	3,893
London	286,211	112,214	45,234
Bristol	56,000	....	5,950
Glasgow	136,000	180,069	31,750
Leith	28,000	....	....
Hull	117,000	....	3,150
Newcastle	....	....	....
Manchester	121,992	51,428	350
Belfast	....	68,571	....
Dublin	....	....	13,279
Other United Kingdom	....	....	....
United Kingdom, orders	....	....	....
Antwerp	189,910	....	....
Holland	32,000	414,898	33,382
France	34,000	26,000	....
Germany	....	334,202	5,119
Portugal, Italy, Spain and Austria-Hungary	128,000	....	700
Scandinavia	....	102,000	700
Asia	....	....	53,371
Africa	....	....	27,025
West Indies	....	48,400	32,195
All other	....	....	4,750
Total	1,388,260	1,575,716	260,848

Exports of oats amounted to 189,820 bushels.

Cereal Crop Movement.

The movement of flour and of leading grains at primary points for the week and that portion of the season ending with August 3 compares with preceding weeks and seasons one and two years ago as follows:

Week ending	*Flour, barrels*	*Wheat, bushels*	*Corn, bushels*	*Oats, bushels*
August 3, 1907	388,623	5,669,609	2,351,343	1,740,543
July 27, 1907	341,583	4,238,927	2,503,967	2,034,765
August 4, 1906	393,139	8,807,966	2,534,378	4,125,273
August 5, 1905	363,767	6,840,989	2,936,138	6,317,340
Season				
July 1, 1907, to August 3, 1907	1,653,950	19,952,835	14,672,631	9,986,421
July 1, 1906, to August 4, 1906	1,897,746	31,117,685	14,964,180	16,435,780
July 1 to August 5, 1905	1,611,041	24,465,503	17,108,064	18,204,779
July 1 to August 6, 1904	1,500,348	16,191,252	11,289,805	11,253,779

COMPARATIVE PRICES OF 107 COMMODITIES.

Quotations ruling for standard grades at the low point in 1896, the succeeding high point in 1900, the succeeding low point in 1901, and the generally high records reached since then:

Wool Markets.

The Boston wool market is very firm and active, with the course of prices in sellers' favor, no concessions being made. Demand for worsted and the finer clothing wools continues strong, receipts and shipments are heavy, and some of the largest buyers are only waiting for a better assortment before purchasing freely. Much more wool has changed hands during the week than has been reported, large sales being made to arrive. The west is well cleaned up on new wools, though arrivals are slow, owing to freight congestion. It is estimated that this year's clip will be 10 per cent. short on account of the severe winter. Sales of the week included Montana and Idaho in the original bags at 24 cents for Montana and 26@27 cents for Idaho, the scoured cost being about 70 cents Staple Oregon was much in demand at 23½@24 cents, with clothing Oregon at 20@21 cents. Fine clothing Idaho sold at 22@23 cents, fine and fine medium Utah at 23@24 cents, half blood Idaho at 25@26 cents, quarter blood Wyoming and Utah at 26@27 cents, Montana fine and half blood at 26@27 cents, eight months' Texas at 23@24 cents, twelve months' Texas at 26@27 cents, fine unwashed delaine at 32@32½ cents, fine washed at 39@39½ cents, Ohio XX at 34½@35 cents, and quarter blood fleeces at 27½@28 cents. Much sampling is being done in California wools, but manufacturers are waiting to ascertain requirements before buying heavily of this class of wool. Pulled wools are very quiet, owing to small stocks. Foreign wools are all very quiet, owing to the very small stocks of fine wools. Low foreign wools are neglected, with South American grades unsalable.

EXPORTS OF MANUFACTURES.

More than three-quarters of a billion dollars' worth of manufactures passed out of the ports of the United States in the fiscal year just ended. To foreign countries alone the total was 740 million dollars, while to non-contiguous territories of the United States the value of manufactures sent was 40 millions, thus bringing the grand total to considerably more than three-quarters of a billion, against less than one-quarter of a billion a dozen years ago.

Of this three-quarters of a billion dollars' worth of manufactures sent out of the country last year, practically two-thirds went in finished form ready for consumption and practically one-third in partially manufactured form for further use in manufacturing. The figures of the Department of Commerce and Labor for the fiscal year 1907 show that of the 740 million dollars' worth of manufactures exported to foreign countries, 480 million dollars were manufactures ready for consumption and 260 millions manufactures for further use in manufacturing, while of the 40 million dollars' worth of manufactures sent to the non-contiguous territories, practically all went in the finished form.

Finished manufactures exported show an increase of about 20 millions over last year and 267 millions over 1897, a decade earlier, while manufactures for further use in manufacturing show an increase of 34 millions over last year and 162 millions over 1897.

Of this 740 million dollars' worth of manufactures sent to foreign countries in 1907, 181 millions was iron and steel manufactures; 89 millions, manufactures of copper; 80 millions, manufactures of wood; 78 millions, mineral oil; 45 millions, leather and manufactures of; 32 millions, cotton manufactures; 27 millions, agricultural implements; 22 millions, naval stores; 21 millions, cars and carriages; 18 millions, chemicals, drugs and medicines; 15 millions, scientific instruments; 10 millions, paper and manufactures of; 9 millions, paraffin and paraffin wax; 7 millions, india rubber and manufactures of; 7 millions, furs and fur skins; while the remaining 100 million dollars' worth is made up of miscellaneous manufactures, chiefly in the finished form.

Iron and steel manufactures form by far the largest single item in the year's exportations of manufactures, the total value of this single group being, as above indicated, 181 millions, against 161 millions last year, and of this total practically 85 per cent. went in finished form ready for consumption.

Copper forms the next largest item, amounting to 89 million dollars, of which a large proportion went in the partially manufactured form of pigs, bars and ingots; and of this 89 million dollars' worth of copper exported, probably 85 millions went to Europe—the large shipments of copper to China, which were two years ago a marked characteristic of the trade with that country, having almost entirely terminated by reason of the large reduction in the production of new copper coinage in China, for which this material was used.

Manufactures of wood exported amounted to 80 million dollars, and of this about 65 millions went in a partially manufactured form, chiefly lumber. About one-half of the total exports of wood manufactures went to Europe, and about one-fourth to North America, while most of the remaining quarter went to South America.

Mineral oil ranks next in the total values of exports of manufactures, aggregating 78 million dollars in value, and practically all in the finished form ready for consumption. Of this total considerably more than one-half went to Europe, about one-fifth to Asia, and the remainder widely distributed, the total number of countries and colonies to which mineral oil is sent from the United States aggregating nearly one hundred.

Leather and manufactures thereof exported during the year aggregated 45 million dollars, of which about three-fourths went in the partially manufactured form of sole leather, upper leather, glazed kid and patent or enameled leather, while a little more than one-fourth went in the fully finished form of boots, shoes, harness, saddles, etc. Of this total of 45 million dollars' worth of leather and manufactures thereof exported, considerably more than one-half (especially that in a partially manufactured form) went to Europe, about one-fifth to North America, and the remainder widely distributed.

Of the 32 million dollars' worth of cotton goods exported in 1907, practically all went in the finished manufactured form, about one-half of the total going to Asia and Oceania and the remainder chiefly to North and South America. Of the 27 million dollars' worth of agricultural implements, all of which went in the form of finished manufactures, nearly one-half went to Europe and a large share of the remainder to the various countries in North and South America. Of the 22 million dollars' worth of naval stores exported (by which term is meant rosin, turpentine, tar and pitch), about three-fourths went to Europe. Of the 21 million dollars' worth of carriages, cars and other vehicles exported, all of which went as finished manufactures, nearly one-half went to North America and the remaining half distributed between South America, Europe, Asia and Oceania. Of the 18 million dollars' worth of chemicals, drugs and medicines, nearly one-half went to Europe and most of the other half to North and South America. Of the 15 million dollars' worth of instruments and apparatus for scientific purposes, nearly one-half went to Europe and the remainder chiefly to North and South America, and of the 10 million dollars' worth of paper and its manufactures, about one-third went to Europe, another third to North America, and the remainder widely distributed.

SMOKELESS CITIES.

Harper's Weekly says: "American cities of the first class have been engaged in a campaign against the smoke nuisance for the past five years with a result that is little short of marvelous. They have achieved their point to a degree that makes the smokeless city of the near future an assured fact. Smoke is an unnecessary curse of national prosperity. Formerly it was considered a badge of great prosperity to have forests of tall chimneys belching forth clouds of sulphurous smoke. The factory which did not thus proclaim its activity was looked upon as a losing investment. Orders were slack and business lagging.

"A strange revolution has been silently worked through the activity of those engaged in suppressing the smoke nuisance. They have demonstrated their earnestness in pushing the campaign, and science has come to their aid. The steam engineer has recognized the hopelessness of his case and has proceeded to devise methods to suppress the smoke without limiting the capacity of the plants. The result is that smoke is now considered poor economy. It indicates imperfect combustion and a waste of fuel which should be avoided. The smokeless factory town is the most prosperous community.

"For decades our factories and manufacturing plants have been pouring up their chimneys in the form of smoke and unburnt coal dust about 85 per cent. of their fuel. This extravagant consumption of coal told heavily on the cost of manufacturing. The soft bituminous coals filled the air with clouds of sulphurous smoke which ruined clothes, furniture and valuable stock and clogged the delicate lungs and nasal and throat passages of all who breathed it. Physicians in recent years are agreed that the weakening effect of breathing an excess of soot has been very great in the past and that the spread of pneumonia and tuberculosis has been partly due to this nuisance. In some cities the smoke fog has been so dense that the average health has been affected through the clouding of the heavens and the consequent shutting out of the bright sunshine. Many factories engaged in making delicate laces, curtains, linens, silks and other costly fabrics have been forced to find isolated locations away from smoke-producing plants. The disagreeableness of having smoke and soot distributed in the living rooms of the home is so great that in many cities windows had to be tightly closed during the greater part of the day. Altogether the smoke nuisance has cost millions of dollars and produced much ill health and irritable nerves.

"But great as this indirect loss to property is, the direct loss through the waste of fuel heat carried up the chimney with the belching smoke is even greater. Engineering economics to-day declare that the loss is useless. It is simply a problem of burning smoke properly. The efficiency of steam plants has been increased from 10 to 20 per cent. through the proper burning of coal. The number of devices invented for preventing smoke loss is so great to-day that it is more a problem with manufacturers to make a choice out of many than to find any at all. These devices are chiefly found in improved mechanical stokers, which give automatic and uniform action, so that sudden changes in the draft cannot send up great clouds of smoke; in improved furnaces with downdrafts of air which carry the distilled gases of the fuel down through the coal when in an incandescent condition and not up the chimney."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 17, 1907.

The strike of telegraph operators in Chicago, which began on midnight of Thursday, August 8, was brought about as a result of the employment of non-union operators at Los Angeles, extended through the west on the next day, involved the middle states and southern cities on Monday, and was extended to include New England on Tuesday, August 13. The Monday strike at New York was somewhat of a surprise, in that what looked like a stampede without actual orders to quit occurred there. In addition, the press operators joined the strike, a step which was hardly expected. The causes of the trouble, aside from the originally assigned reason, varied with the cities involved. For instance, the discharge of nine operators at New York was one assigned cause, but in an appeal to operators to quit the general secretary of the telegraphers' union was quoted as saying it was a fight for the "closed shop." The estimates of the number involved varied, being placed at from 18,000 to 22,000, according to the estimates of different authorities. At no time was there an actual tie-up of the Western Union or Postal Telegraph Companies' entire systems, though for a time certain cities were "lost," and the companies resorted in a few instances to the mails to transmit messages.

Early this week the interruption to the country's trade was considerable, boards of trade and exchanges suffering especially because of the absence of quotations, but it might be noted that the wide extension of the telephone and improvements in mail service have put the country, as a whole, in a different relation to the telegraph service from that in which it stood in the last general strike of telegraphers in 1883. As the week advanced the service of the telegraph companies improved, and from delays of several days at first the service caught up until practically no delay was witnessed. The cable operators did not strike, and communication with Europe was at all times open. It was, perhaps, significant that it was not until Friday, when the telegraph companies had almost succeeded in resuming normal service at many cities, that the president and executive board of the telegraphers union gave the formal order to strike, but on the same day the operators employed by the Associated Press went back to work, and the strike gave signs of failing.

A marked success was scored by the American delegation to the Peace Conference in securing the adoption by the sub-committee having it in charge of the proposal regarding the establishment of a permanent court of arbitration at The Hague. The important feature of the proposal is that it aims at the establishment of a definitely constituted permanent court with a fixed number of judges, named for a specified term. The establishment of such a tribunal by the conference would be a result of its labors which posterity would pronounce second to none of those achieved by it. Happily the creation of the court seems now to be highly probable, owing to the fact that the United States, Great Britain, France and Germany have, according to report, definitely agreed upon a scheme for its establishment under the title of the International Court of Justice.

Present signs seem to indicate that the conference, which has now been over two months in session, is nearing the end of its work. Some of the delegates have already made preparations for their departure, and the expectation seems to prevail that the gathering will not be prolonged much, if at all, beyond the close of the current month. It is, of course, too early to present a summary of its achievement, because the work so far has been almost wholly preliminary and in committee, and there can properly be set down to the credit of the conference only what it does in plenary session. It is considered probable that the conference will content itself with adopting a declaration to the effect that a limitation of armaments is desirable, which means that the question of disarmament is regarded as resting in the realm of aspiration and of academic discussion. A proposition for a periodical meeting of the Peace Conference has been somewhat discussed of late, though whether it will be adopted is still uncertain, owing mainly to some differences of opinion on the subject between England and Russia. It may not be improper to note at this stage that the part played by the delegates from the United States has been a most important one and not unworthy of the eminence in affairs of its leading representatives in this peace parliament of the world.

While no details have been given out as to its terms, it is announced that a temporary agreement has been reached under which the Newfoundland fisheries will be opened to fishermen from the United States during the coming season. It is expected that this agreement will be completed and put in force before the adjournment of the British parliament at the end of the present month. Coupled with this announcement comes the report that a paramount agreement on the fisheries question has been arrived at between Secretary Root and Ambassador Bryce, and that it will probably go into effect during the coming year. Meanwhile, advices from St. Johns, N. F., indicate that communications are passing between the colonial and imperial cabinets regarding the renewal of last year's modus vivendi with additional clauses, and that the United States government is pressing for an early settlement of details so that the vessel owners may take advantage of the opening of the herring fishery season.

Many plans looking to the betterment of the postal service are now under contemplation by the government, according to information given out by Postmaster-General Meyer. These plans comprise the establishment of a parcels-post service throughout the country; the reduction of the first-class letter rate between the United States and foreign countries with which direct steam communication exists; the establishment of a postal savings-bank system; the revival of the postal note and the increase of money-order facilities; the manufacture by the government and the widespread installation of stamp-vending machines; the sorting of foreign mail matter on all ocean liners coming into New York; the establishment of an additional evening delivery in thickly populated residential districts in New York City and of additional deliveries in the financial district, coupled with the extension as rapidly as possible of the pneumatic-tube service, and finally the extension of the rural free delivery service. These proposals make up quite an extensive programme, but Mr. Meyer hopes to carry it out without advocating an increase in the rates for any class of mail matter.

A portion of the text of the treaty recently concluded between Russia and Japan has been made public in a cable dispatch from St. Petersburg. By its terms each agrees to respect the present territorial integrity of the other as well as all rights accruing from existing treaties or conventions now in force between them and China, so far as these are not incompatible with the principle of equal opportunities enunciated in the treaty of Portsmouth and in the special conventions concluded between the two contracting powers. The second article recognizes the independence and territorial integrity of the Chinese empire as well as the principle of equal opportunities in commerce and industry for all nations therein, and embodies a pledge for the maintenance of the status quo and the respect of that principle with all the peaceable means at their disposal. The conclusion of this treaty, occurring almost simultaneously with the signing of another between Great Britain and Russia covering important points touching their interests in Asia, would seem to give promise of an era of quiet in the Far East which it will take no slight causes to disturb.

Considerable discussion is being had at Washington just now regarding the likelihood of an international conference being held in the United States with the view of endeavoring to bring about uniformity of practice in dealing with food adulterations. As is shown by the passage of the pure-food law, the United States has taken advanced ground in relation to the matter. At successive stages in the attempt to frame regulations for the export trade, however, differences of opinion have arisen as to the proper definition of adulterants, and it is the belief of the Washington officials most concerned that these differences, or, at any rate, some of them, might be reconciled or obviated as the result of such a conference as has been suggested. This idea is strongly supported by Dr. Wiley, the Chief of the Bureau of Chemistry in the Agricultural Department, who, after some discussion of the matter abroad, coupled with his experience at home, has become convinced that the plan is entirely feasible, and that regulations of international application might be adopted which would save much trouble and friction.

There is, just at the moment, a lull in the situation at Casablanca, in Morocco, but this has been brought about only as the result of sharp action by the French expeditionary force. The wild tribesmen who were driven from the town by the fire from the warships and the vigorous attacks of the French and Spanish troops made repeated assaults upon the town, but were repulsed with heavy loss by the European troops, aided by the guns of the warships. The position of the French and Spanish troops is, however, necessarily a defensive one, pending the arrival of reinforcements, because of the smallness of the force on the ground, while owing to the efforts of the Moorish leaders to fan the flame of religious fanaticism the numbers of the tribesmen in arms have increased.

A DEMORALIZED STOCK MARKET.

Agitation against corporations and the legal and administrative action which has been directed against abuses on the part of such organizations have unquestionably had a prominent share in creating the enormous shrinkage in security values which has been witnessed in the stock market of late. Even more unsettling, however, has been the uncertainty as to what further adverse measures are contemplated by the executive departments of the federal government. The general effect of the agitation has been to discourage investment buying of railroad and other corporate stocks and bonds, while it is equally apparent that what are termed large interests, some of which are more or less directly affected by pending or threatened proceedings under the Sherman act and other laws designed to regulate corporations, have for one reason or another done little to allay the continued and severe demoralization which the stock market has again exhibited during the past week.

The importance which Wall street has attached to this phase of the situation seems, however, to have in a large degree obscured the fact that the anti-corporation agitation is not the only cause of weakness, low prices and liquidation. Nor are the markets of the United States exceptional in exhibiting such manifestations. The European financial centers have been suffering from the same exhaustion of buying power, and insufficiency of capital to absorb constant emissions of new securities put out by governments, municipalities and corporations of all descriptions, without being influenced in any degree by legislation or governmental action, as has been the case in this country. The fact that British consols have this week made another new low record in their quotations on the London Stock Exchange, with the continuance of stagnation in the investment market at that city, and the accompanying practical failures of various offerings of new bonds, would go to show that the attitude of the national administration of the United States, with the disposition shown in various states, especially at the south, to adopt and enforce harsh measures against railroad corporations and their officials, while it greatly aggravates the disturbance in the stock market, is not the only reason therefor. In fact, it may be confidently assumed that if financial conditions were normal in the other great markets of the world and capital were correspondingly abundant, the present low level of values for investment securities, based upon transportation and industrial properties in the United States, would, in view of the generally prosperous condition of this country's business attract purchasing by European interests, even in spite of the apprehensions which so-called corporation baiting is calculated to produce in such quarters. The action of the Bank of England in raising its discount rate on Thursday was indeed almost openly taken for the purpose of guarding the English money market against the effects of the trouble here and making it difficult for our own money market to obtain supplies from London. Of foreign buying there has, accordingly, been no sign as yet.

As it is, the demoralization simply became more acute this week, and the importance which was attached to considerations of the kind just referred to is shown by the fact that the most substantial rallies which were shown in the downward course of stock quotations were based upon reports that the Executive and his principal advisers had presumably considered the issuance of some declarations as to the future policy and action of the Departments of Justice and of Commerce, which would tend to have a reassuring effect upon the minds of the investing public, and to arrest the liquidation which had become so severe as apparently to be in danger of running into a stock panic, calculated not only to intensify the damage to holders of securities, but to react in the end upon the general business of the country.

As it was, the present week has seen in the case of most of the active stocks traded in at the New York Stock Exchange the lowest prices of the year—lower ones, in fact, than were recorded in the so-called panic of last March. This is shown by the ensuing tabulation, contrasting the high prices for the year and the low figures of last March with the extreme declines of the present week. The enormous shrinkage which has been involved in the course of the market since January 1 is also exhibited by comparing this week's prices with the high ones of the year 1906; that is to say, the artificially advanced values for most stocks which were produced last autumn. Supplementing this is a record of the declines in points in the May panic of 1901, and in the declining market of 1903, as well as from January, 1907, at which time the high figures of the present year were generally recorded, followed by comparisons indicating the extent to which the more prominent trading securities have shrunk since July:

Of the stocks embodied in the first table, the only ones which have not sold this week below their level in last March are Canadian Pacific, Chicago & Northwestern, Southern Pacific and Union Pacific. Moreover, it will be seen that the extent of this year's total declines makes them, on the whole, fully equal to those which attended the industrial depression in 1903, though, on the other hand, the shrinkage since July, violent as it has seemed, has not been so severe as that which attended the memorable Northern Pacific corner of May, 1901.

RAILWAY GROSS EARNINGS STILL ADVANCING.

Although the volume of traffic moved over the railroads in July may not have been so heavy as in recently preceding months, the fact is that gross receipts for that month show a substantial gain of 11.4 per cent. over the figures for the corresponding period in 1906, when the increase over July, 1905, was 14.1 per cent., and when superlatives were employed to describe the trend of railway earnings. In view of the facts one is forced to conclude that business, on the whole, is still ahead of last year's, even though this or that line may tend to display a shrinkage. Indeed, if the increase reported for July of the current year were somewhat smaller there would hardly be any room for chagrin; first, because July is a midsummer month that comes between the end of the movement of old grain and the beginning of the movement of the new grain, and, secondly, because harvests are backward this season, all of which would ordinarily produce something of an easing up in railway traffic. As it is, however, shipments of merchandise are quite heavy, traffic in grain, live stock and lumber is fair, and the tonnage of coal, in the west particularly, is good. All in all, it is difficult to find reasons for complaining about railway earnings, that is, gross receipts, although there is plenty of opportunity for fault-finding when one comes to a consideration of net earnings, the course of which is affected to a considerable degree by the greatly increased cost of operations.

In the month of July this year roads operating over 98,000 miles reported gross earnings of $89,100,900, the gain over the like month in 1906 being $9,131,020, or 11.4 per cent. The real proportion of this increase is best brought out by stating that the gain in July last year was 14.1 per cent., while in 1905 it was 7.4 per cent., although in 1904, a slack-water period, there was a decrease of 1.4 per cent., but in 1903 there was an advance of 12.3 per cent. Thus gains, eliminating the slight break in 1904, are cumulative in character. This table gives in group form all the data for July that have become available:

	1907	1906	*Inc., p. ct.*
Northwestern	$9,031,756	$8,235,399	9..
Central-western	15,027,587	13,783,990	8.9
Trunk lines	27,023,431	24,392,426	10.7
Southern	12,875,201	11,907,455	8.2
Southwestern	9,308,219	8,403,758	10.7
Pacific	15,831,706	13,246,852	19.4
Total	89,100,900	79,959,880	11.4

Gains are the rule, the leading one being that of 19.4 per cent. reported by the Pacific group. The trunk lines show an advance of 10.7 per cent., while the southwestern roads furnish a like increase. The northwestern roads furnish an increment of 9.7 per cent., while the central-western division displays an accretion of 8.9 per cent., and the smallest ratio of gain is that shown by the southern roads—8.2 per cent.

A short statistical history of railway gross earnings is given in the following table, which shows the monthly trend of receipts back to 1901:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9
May	15.1	14.7	9.5	3.5	12.0	9.0	9.2
June	13.4	13.3	6.3	.6	14.1	8.1	6.8
July	11.4	14.1	7.4	1.4	12.3	7.5	13.3
August	..	13.1	5.1	*3.4	9.4	4.6	13.2
September	..	9.3	6.3	*4.0	7.9	9.6	10.5
October	..	11.2	5.9	*4.0	5.5	6.6	11.8
November	..	4.6	9.1	*9.9	4.0	7.2	12.1
December	..	5.7	9.9	*8.0	4.6	9.4	5.5
Year	..	12.7	6.9	*1.4	11.5	8.0	10.5

* Increase. † Decrease.

Comparatively few roads show decreases, and where losses are noted in individual cases the volume is not sufficiently large to merit especial consideration. On the other hand, many roads report noteworthy gains over July, 1906. Thus the Northern Pacific, the New York Central and the Canadian Pacific report increases of $1,266,481, $1,040,095 and $1,018,000 respectively.

All of the principal increases scored in July this year are set forth in the following:

LEADING INCREASES IN GROSS EARNINGS.	
Northern Pacific	$1,266,481
New York Central	1,040,095
Canadian Pacific	1,018,000
Baltimore & Ohio	707,057
Grand Trunk	395,002
Illinois Central	360,673
Southern	349,795
Missouri, Kansas & Texas	336,913
Canada Northern	335,700
Louisville & Nashville	332,837
Denver & Rio Grande	294,600
Great Northern system	276,222
Buffalo, Rochester & Pittsburgh	275,348
Michigan Central	267,872
Missouri Pacific	256,000
Lake Shore	220,444
Texas & Pacific	201,076
Cleveland, Cincinnati, Chicago & St. Louis	169,099
Pittsburgh & Lake Erie	117,922
Minneapolis, St. Paul & Sault Ste. Marie	103,813
Mobile & Ohio	82,667
Wheeling & Lake Erie	72,830
Colorado & Southern	70,463
Wabash	63,790
Total	8,615,599

Returns for identical roads for the first seven months of the current calendar year are given in the appended table:

	1907	1906	*Increase*	*P. ct.*
January	$69,929,545	$68,272,841	$1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
April	79,282,674	68,316,988	10,965,686	16.0
May	82,728,103	71,898,426	10,829,677	15.1
June	82,056,350	72,355,927	9,700,423	13.4
July	89,100,900	79,969,880	9,131,020	11.4
Seven mos.	541,548,162	492,342,418	49,205,744	9.9

It will be seen that gross receipts for identical lines aggregate $541,548,162, the gain over the corresponding period in 1906 being $49,205,744, or 9.9 per cent.

THE TREASURY AND THE MONEY MARKET.

According to report, the Secretary of the Treasury, Mr. Cortelyou, has already decided upon the measures which the government should adopt in order to relieve the money market during the crop-movement season. As has been pointed out before, the Treasury Department, while maintaining an entirely adequate working balance, could readily afford to distribute something like $50,000,000 or more in the form of deposits in the national banks, thereby relieving the stringency which is pretty sure to occur when the calls of the west and south for actual currency with which to carry on harvesting operations and move the cotton and grain crops of the country are in full

swing. The Secretary, it is said, has accordingly resolved to pursue, with some modifications, the methods adopted by his predecessor, Mr. Shaw, last year. It is stated that the Treasury officials do not expect that the amount of money called for will be as large as that which was needed last year, and it is also pointed out that the Treasury is in better shape to meet the demand, owing to the ability which it is believed to possess under an act of the last Congress to deposit customs receipts, as well as those derived from internal revenue, in the national bank depositories.

An important modification of the methods hitherto pursued by the Treasury in connection with its deposits in the national banks takes the form of a plan whereby the funds which the government places in the banks shall be subject to withdrawal by check. In this way the Treasury places itself in the attitude of an ordinary depositor, and simplifies the arrangement between it and the depository banks. This proposition has naturally been received with considerable approval, but at the same time suggestions have not been lacking that the Treasury regulations might undergo a further and beneficial change if it should be determined to permit payment of customs and other revenue collections by means of checks, instead of by the deposit of the actual cash, as is now required. The modernization of the government's financial operations, making payments to the Treasury the subject of Clearing House operations, would, it is argued, have a very decided influence upon the money markets, and minimize the actual employment of funds which are involved in payments to it. The importance of reducing actual drains upon the bank reserves of the country can be readily appreciated, but whether this further expedient will be adopted remains to be seen. It represents a departure from traditional methods which the department would be likely to take only after careful deliberation, and in connection with safeguards calculated to provide against untoward results under the stress of novel or unforeseen circumstances.

BUSINESS LEGISLATION BEFORE THE AMERICAN BAR ASSOCIATION.

A number of recommendations for legislation upon matters which touch business at one point or another will be laid before the American Bar Association by committees of that body when it convenes at Portland, Me., a week from Monday. From an advance abstract which has been given to the press of a report dealing with insurance abuses and suggesting some methods of correcting them, it appears that the committee on insurance holds that the responsibility for corruption by company and state officials with respect to life insurance lies in part with the system of state supervision in vogue, but back of that, in extravagance, manipulation of investments, excessive commissions or a riotous desire for bigness which was developed out of the failure to apportion frequently and account for the immense surplus accumulated through the deferred payment policy. The report is particularly severe upon what it terms the incompetent or corrupt administration of the unsatisfactory insurance laws in force in the several states. With few exceptions the state insurance departments are declared to be sinecures. In the view of the committee a federal insurance department with jurisdiction over interstate transactions in insurance would furnish the American people a higher degree of protection against incompetency and fraud than is possible under the existing system of state supervision.

As has been already indicated in these columns, some legal difficulties may be found to lie in the way of the establishment of a system of federal supervision, and only an indirect method of attaining that result is suggested in the resolutions proposed for adoption by the committee. This is "federal supervision by means of postal rules restricting the use of the mails to insurance companies doing business within certain recognized lines." It need scarcely be said that this falls short of some plans already suggested looking to the same general end. After urging the adoption of a resolution disapproving what it declares to be "the prevalent custom which makes state insurance commissionerships political prizes," the report recommends that all companies created under the laws of foreign countries be required to make a deposit in at least one of the states before transacting business anywhere in the United States; that the valued policy laws be repealed; that the office of fire marshal be created in each state, and that the apportionment and contingent distribution of the deferred dividend surplus on existing life policies of all companies be made a condition precedent to the transaction of business outside of the home states of the several companies. These recommendations of the committee on insurance, will be passed upon by the Bar Association, which is generally regarded as a conservative body, and whose indorsement would carry much weight with the general public.

The committee on commercial law has prepared a report in which the belief is expressed that the definition of insolvency in fact should be enlarged, and that the national bankruptcy act should be modified so as to provide that insolvency may be proved by evidence establishing any one of the three following circumstances, namely, (1) the return of nulla bona to a writ of fieri facias (execution); (2) inability to pay debts in the course of business as they mature (to be limited to commercial classes), and (3) the appointment of a receiver for a copartnership or corporation which is insolvent. The committee recommends further that the enumeration of acts of bankruptcy be enlarged so as to coincide with the new definitions of insolvency in fact. The same committee recommends the approval by the Bar Association of both the proposed uniform sales act and the uniform warehouse receipts act, and that a special committee or special committees of the association be appointed to secure the passage of those measures by legislatures of states which have not already adopted them, and by Congress for the District of Columbia.

Uniformity in legislation along a particular line is not secured rapidly or with ease among so large a number of legislative jurisdictions as are comprised within the territorial boundaries of the United States. An illustration of this fact may be found in the account given by the committee of the progress thus far made in securing the enactment of the two bills last mentioned. In six of the states there has been no session of the legislature since the last meeting of the association. The sales act has not been introduced in the legislatures of thirty-three other states, and the warehouse receipts act has not been submitted to the legislature of twenty-seven states where they have convened. The sales act has been actually adopted in two states and one territory, namely, Connecticut, New Jersey and Arizona. It was introduced but not passed in the legislatures of Georgia, Maine, Massachusetts, Minnesota, Nebraska, New York, Pennsylvania and Washington. The warehouse receipts act has been adopted in Connecticut, Idaho, Iowa, Massachusetts, Montana, New Jersey, New York, and in a slightly modified form in Illinois, or eight states in all. It was introduced but did not pass in the legislatures of Florida, Georgia, Maine, Minnesota, Nebraska, Pennsylvania and Washington. No report on either bill has come from Mississippi, while advices from Alabama indicate that the warehouse receipts bill is pending in the Senate of that state. Both bills were introduced in Congress for the District of Columbia but were not reached. It takes time and effort to secure uniformity, but with them, vivified by a steady enthusiasm, very gratifying results may be attained, as is shown by the progress made in procuring the adoption of the negotiable instruments law.

THE STANDARD OIL COMPANY AND THE ADMINISTRATION.

Steps looking to a review of the judgment entered against the Standard Oil Company at Chicago have been taken with great promptness. On Friday of last week counsel for the company applied for a writ of error to Judge Grosscup in the United States Circuit Court of Appeals for the Seventh Circuit and the writ was granted, though action upon an application for a writ of supersedeas was postponed pending the determination of the amount of bond the company should be required to file. On the same day the attorneys for the company filed the bill of exceptions to the rulings of Judge Landis in the Circuit Court. These exceptions number over one hundred, and in view of the importance of the case certain of them possess a greater degree of general interest than usually attaches to such matters.

Among the rulings of Judge Landis to which exceptions are taken are his decision that 1,462 offenses had been committed instead of limiting the number to the payments or shipments involved, his ruling that the connection with the St. Louis terminal companies constituted a railroad route in interstate commerce, and his exclusion of testimony with reference to the 6¼-cent rate over the Chicago & Eastern Illinois Railroad Company's road. Other points made on behalf of the company are that the Hepburn act repealed the Elkins law and extinguished the penalties prescribed thereunder; that the Elkins law is unconstitutional because (1) it fails to define with sufficient particularity the offense of which the defendant was convicted; (2) it is an unwarranted delegation to railway companies of the legislative power to fix rates; (3) it does not affirmatively give the shipper the right to appeal to the courts and show that the rate required is excessive, and (4) the power to regulate commerce does not include the power to prohibit the making of charges by common carriers. Finally, the point is made that the fine imposed was excessive and was in violation of the eighth amendment to the Constitution, which prohibits the imposition of excessive fines or the infliction of cruel and unusual punishment.

It may not be without interest to note that on the day on which the writ of error was secured at Chicago the Standard Oil Company of New York was indicted by the federal grand jury for the western district of that state for accepting special and illegal concessions from railroad companies operating between New York and Vermont. The charges are made in reference to shipments of 228 cars of petroleum and its products from Olean, N. Y., to points in Vermont by the routes of the Pennsylvania and New York Central railroads, combined with those of the Rutland and the Vermont Central railways. Indictments were returned at the same time upon the same facts against the Pennsylvania and the New York Central railway companies and the Vacuum Oil Company of Rochester. In the event of conviction upon the counts in these indictments the Standard Oil Company, in case Judge Landis's rulings should be followed, would be liable to a fine of $4,560,000, while the aggregate fines for the four corporations involved would, in case of the conviction of all, amount to $18,240,000.

While these proceedings were in progress in the courts the Bureau of Corporations was finishing up its work on a fourth installment of its report upon the Standard Oil Company, which was made public the first of the week. In this report, which deals with discrimination in prices, the charge is made that the Standard, enjoying practically an absolute monopoly of the oil trade in the United States, has charged "such prices as it could thereby extort, and the American consumer has had to pay those prices"; that "meeting competition abroad, it has given the foreign consumer enormously lower prices, and it has used the profits made at home to maintain its position abroad, so that the American consumer has been severely discriminated against for the purpose of maintaining, not the dominance of American export trade, but the dominance of a particular combination which has used its power frequently and conspicuously to the disadvantage of the American public." In support of its conclusion in this direction the report cites statistics going to show that the course of American and foreign prices in the last five years of the period covered by it exhibited a greatly increased divergence, the American prices in general going up and the foreign prices showing a marked decline.

In like manner, the report declares, as the result of the Standard's policy there has been established a remarkable system of discriminations in prices for the same products in different localities throughout the country. To take only one illustration out of several adduced, it is pointed out that the average price for a gallon of oil, freight deducted, ranges among the states on the Atlantic seaboard from 7.7 cents in Delaware to 13 cents in part of Georgia, and that on the Pacific coast the price ranges from 7.2 cents to 15.7 cents per gallon. It is proper to say in referring to this

report that the Standard Oil officials promise that at the proper time and place full and complete answers will be made to what are termed the "erroneous and illogical statements" of the Bureau of Corporations. In a brief statement issued on Monday they declare that the inquiries, the reports and the illogical deductions of all deparments of the government have been actuated by no other spirit than to "down the Standard," using a phrase alleged to have been employed by one of the Corporation Bureau's agents in asking information from an English dealer in Russian oils. The Standard officials insist, on the other hand, that the business of the company "has been conducted always with careful reference to the rights of the public and under the best possible advice in conformity with our complex laws."

EDITORIAL NOTES.

It is interesting to note that while a conference of the attorney-generals of the different states in the southern portion of the Mississippi valley has been in progress this week at St. Louis with a view to devising concerted measures to attack and punish "trust" organizations, steps are on foot to bring about another new industrial combination of large proportions. The project in question relates to a prospective merger of the paper mills and pulp works of several western states, it being stated that the new corporation will be formed on the usual "trust" principles with an exceedingly large capitalization, and that the avowed purpose of its promoters is to practically control the paper and pulp business in the northwestern states. It would accordingly seem somewhat remarkable that in the face of continued efforts by the legal and executive officials of various sections of the country to curb and harass such combinations, and of the tendency of legislatures to make the laws which bear upon them more and more stringent, the owners of properties which can be utilized in such connection, and the capitalists whose aid is necessary for financing the operations, should venture to enter upon schemes like the one which is referred to above. It may, however, also be noted that one industrial combination has this week succumbed to a combination of unfortunate circumstances and has been placed in the hands of a receiver. The company in question is the Pope Manufacturing Company, which is a reorganization of the American Bicycle Company, of unfortunate memory. The company's bankruptcy, it is, however, stated, is not on account of any lack of business in its line, which comprises the manufacture of bicycles and motor vehicles, but is due to inability to procure adequate financial accommodation from the banks.

Much importance attaches to the attitude of the foreign financial markets, and particularly of London, toward American securities, and also in respect to loans to interests identified with the stock market on this side of the ocean. It has already been pointed out that London has displayed much unwillingness to loan its capital to Wall street, as it usually does at this season of the year. In fact, the volume of such transactions during the past month or so seems to have fallen far below the customary figures. Owing to the restricted conditions which prevail in the London money market and at the continental centers as well, together with the low prices for British consols and other securities, there would seem to be good reason for the indisposition of foreign bankers to put out large amounts of money in New York. Indeed the raising of the Bank of England's rate to 4½ per cent. on Thursday, a most unusual proceeding at this time of year, seems to have been dictated by a desire to protect the British money market from American inroads. It would, however, seem, according to recent advices, that the backwardness on the part of foreign capital in taking advantage of the high rates which can be obtained at New York for loans running over January 1 is partly based on other considerations, chief among which are the violent fluctuations which have prevailed in the values of American securities and the uncertainty which still exists as to the ultimate effects of the agitation against corporations and the measures adopted by the authorities, national and state, in connection with such concerns. Foreign financiers, it would appear, lack the courage to tie up large amounts of money in fluctuating values, especially at a time when perfectly stable home securities are remarkably cheap. In other words, the collateral which American markets offer as securities for their loans is looked at askance. Moreover, this feeling, which is largely an outcome of the recent legislation and administrative measures regarding different corporations in this country, has cut off for the time being foreign investment buying of our railroad and other securities, despite the prevalent belief that interest and dividends will continue to be paid thereon, with the additional inducement that at present quotations the income return they yield would ordinarily be exceedingly attractive in the eyes of foreign investors.

A fresh illustration of the difficulty which American municipalities, even those of the highest credit, find in obtaining purchases for their bonds has been furnished by the results attending the offering of about $4,000,000 4 per cent. bonds by the city of Boston last week, and the $15,000,000 of 4 per cents advertised by the finance department of New York City in the present week. In the case of Boston the bids were for only an insignificant amount of the total offering, while in the case of New York the applications, which in only a few instances were slightly above par, aggregated merely some $2,700,000. These instances are supplemented by the fact that several smaller municipal bond issues brought out within the last few days have also fallen flat or have been met by bids for only a small proportion thereof. It seems, in fact, that in the present condition of the money and investment markets, municipal bonds bearing as low a rate as 4 per cent., even when exempt from taxation and furnishing a legal medium for the investment of savings bank and trust funds, are not attractive, in view of the much higher rate of interest which can be earned through purchases of railroad and other bonds. The finance department of New York City, having been enabled to do so by the amended law passed at the recent session of the legislature, can now sell its bonds at par by private sale, or over the counter, as it is termed, and has, in fact, since the formal subscription closed, been able to market some $2,000,000 additional, some of the city's creditors having accepted amounts of the bonds in settlement of their claims. An unfavorable side to this latter situation, however, is that some of these bonds have later appeared in the street and offered 1 to 2 points below par, having been sacrificed by their holders to raise necessary funds. The idea of a popular subscription has not, however, been quite as successful as some oversanguine advocates of such a plan seem to have imagined would be the case. In fact, it may be noted that the acting comptroller of New York suggests further amendments to the existing laws on the subject which would increase the desirability of the city's bonds for investment by banking institutions, or, in other words, to make them entirely exempt from taxation.

Mention was made in these columns last week of the fact that commodity prices in England showed a decline in July strikingly similar to that reported by BRADSTREET'S for United States markets. The London *Economist*, for instance, showed a decline in its price index number during that month from 2594 to 2571, or about eight-tenths of 1 per cent. The latter figure is, however, considerably higher than that recorded at the end of last year, and the general range of English prices is still very high. The following is a statement of the *Economist's* index number for each month of the current year, and at intervals since the end of the year 1902:

End of	*Index No.*	*End of*	*Index No.*
July, 1907	2571	September, 1906	2355
June, 1907	2594	June, 1906	2362
May, 1907	2601	March, 1906	2306
April, 1907	2549	December, 1905	2342
March, 1907	2516	June, 1905	2163
February, 1907	2521	December, 1904	2136
January, 1907	2494	June, 1904	2130
December, 1906	2499	December, 1903	2197
November, 1906	2501	December, 1902	2003
October, 1906	2458		

"One feature of the month's record," says the *Economist*, "was the numerous fluctuations in the price of copper, the tendency being downward, and at the close the quotation was materially lower than at the end of June. Tin also declined. There was, however, a rather pronounced advance in pig iron, owing to a rapid decrease in the warrant stocks, and lead also improved in price. In the textile section raw cotton moved up to a small extent, but cotton manufactures lost ground slightly. Wool and silk declined. Timber became dearer during the month, and in the list of foodstuffs and articles of domestic consumption wheat hardened in price on account of the prospects of a lessened production from the forthcoming harvest. Meat, copper and sugar were somewhat cheaper at the end than at the beginning of the month."

Revised figures of European wheat stocks held on August 1 show that at that date there were held 62,300,000 bushels in and afloat for Europe, as against 71,300,000 bushels on July 1, and 62,700,000 bushels on August 1 a year ago. This was a decrease of 9,000,000 bushels from July 1, and of 400,000 bushels from August 1 last year. The combined American and European stock on August 1 was 126,000,000 bushels, a decrease of 10,800,000 bushels from July 1, but a gain of 17,600,000 bushels as compared with August 1, 1906, and of 33,000,000 bushels as compared with August 1, 1905. The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same dates, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7

Sept. 1	....	45,2	22,8	....	70,7	73,0	....	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

The leading features of the August 1 crop report made by the Agricultural Department late last week were given in brief in BRADSTREET'S of August 10. The report as a whole was, however, a very lengthy one, and for purposes of record it is given in full this week in another column. Put in brief table form, the following conditions are shown as of August 1, as compared with July 1, 1907, August 1, 1906 and 1905, and the average figures for a period of years:

	Aug. 1, 1907	*July 1,* 1907	*Aug. 1,* 1906	*Aug. 1,* 1905	*10-yr av'ge*
Corn	82.8	80.2	88.0	89.0	83.2
Spring wheat	79.4	87.2	86.9	89.2	83.4
Oats	75.6	81.0	82.8	90.8	84.9
Barley	84.5	84.4	90.3	89.5	86.0
Rye	88.9	89.7	90.8	92.6	88.5
Buckwheat	91.9	....	93.2	92.6	91.8
Tobacco	82.8	81.3	87.2	84.1	*83.4
Potatoes	88.5	90.2	89.0	87.2	85.8

* Five-year average.

Reduced to a quantitative form, the probable results (in bushels) of the condition figures of the leading cereals point to about the following:

	Possible yields 1907	*Actual yields* 1906	*Record yields and years*	
Winter wheat	409,500,000	492,888,000	492,888,000	1906
Spring wheat	228,850,000	242,372,966	293,185,322	1899
Total wheat	638,350,000	735,260,966	748,460,218	1901
Corn	2,648,650,000	2,927,416,091	2,927,416,091	1906
Oats	910,488,000	964,904,522	987,842,704	1902
Barley	163,670,000	178,916,484	178,916,484	1906
Rye	33,800,000	33,374,833	33,630,592	1902
Total above cereals	4,394,958,000	4,839,872,896	....	..

There is here indicated a total crop (in bushels) of five leading cereals of 4,394,958,000, which is a decrease of 9 per cent. from 1906. These figures point therefore, on the whole, to smaller but not short yields of leading grains, the final outturn, particularly in corn, depending upon the character of the weather in the next six weeks. An additional feature of the latest government report is the very full statement of conditions among the other crops which go to make up this country's agricultural returns, and which will be found summarized herewith:

	Aug. 1, 1907	*July 1,* 1907	*Aug. 1,* 1906
Pastures	91.7	88.9	87.7
Timothy hay	89.0	82.0	82.0
Alfalfa	92.0	88.0	91.0
Millet	88.0	88.0	85.0
Flax	91.8	91.2	92.2
Rice	88.6	88.7	83.1
Sweet potatoes	86.0	86.0	91.0
Watermelons	78.0	75.0	81.0
Sorghum	83.0	85.0	89.0
Sugar cane	92.0	93.0	87.0
Sugar beets	92.0	91.0	96.0
Hops	89.0	89.0	97.0
Hemp	88.0	89.0	90.0
Broom corn	86.0	85.0	89.0
Onions	92.0	90.0	90.0
Beans	89.0	87.0	90.0
Tomatoes	86.0	82.0	87.0
Apples	39.0	44.0	68.0
Peaches	33.0	36.0	66.0
Grapes	84.0	84.0	86.0

The hay crops all gained in condition during July, but the apple and peach crops lost, and the comparison with a year ago in this latter direction is not a favorable one.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Husband's Land—Wife's Interest.

The Supreme Court of Minnesota held, in the case of Griswold vs. McGee et al., that the right which a wife has by virtue of chapter 40 of the General Laws of 1875 and chapter 37 General Laws of 1876 in the lands of her husband during coverture is inchoate and contingent, and may at any time before it becomes consummate by the death of the husband be diminished or entirely taken away by the legislature.

Railroad—Crossing—Grade—"Practicable."

The Supreme Court of Indiana held, in the case of Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company vs. Indianapolis, Columbus & Southern Traction Company, that evidence of civil engineers that it is possible to substitute an overgrade or an undergrade crossing for a grade crossing of an interurban railroad and a steam railroad did not necessarily establish that it was "practicable" to make the substitution as provided by the act of 1903, section 5, page 125, especially where the expense of such a change would be very great.

Liquor Saloons—Residence District.

The Supreme Court of Indiana held, in the case of City of Greencastle vs. Thompson, that under the cities and towns act of 1905, subdivision 40, section 53, the common council of a city has express power to define suburban or residence parts of the city from which saloons are excluded, and that where an ordinance defining the same and excluding saloons therefrom has been duly adopted, it constitutes sufficient proof of the territory in which saloons are forbidden, and can only be overthrown, if at all, by showing that the city abused its power in defining the residence district and that the ordinance was so unreasonable and oppressive as to exceed the power granted to the municipal corporation, and that no constitutional guaranty was violated either by the statute granting authority to pass such an ordinance nor by the ordinance itself.

Taxation—Railroad Property.

A decision of no little interest in reference to the taxation of railroad property has been rendered by the New Jersey Court of Errors and Appeals in the case of The Bergen & Dundee Railroad Company vs. State Board of Assessors et al. The case involved the constitutionality of the Duffield act of 1905, under which so-called second-class railroad and canal property was assessed at local tax rates instead of 1 per cent., as previously. In the case before the court the railroad company appealed from the assessment of its second-class property in the city of Passaic at a rate which was much in excess of that formerly paid. The court held that the Duffield act, under the authority of which the rate was levied, was not in conflict with the provision of the state constitution that "property shall be assessed under general laws and by uniform rules according to its true value," and did not contravene the provision of the national constitution that no state shall "deprive any person of life, liberty or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

Employer's Liability—Lease—Privity.

The Kentucky Court of Appeals held, in the case of Illinois Central Railroad Company vs. Sheegog's Adm'r, that where a railroad corporation has been given a franchise by an act of the legislature of the state under which it has assumed certain burdens, it cannot by a lease exempt itself from responsibility for the torts of itself and its lessee; that while the courts have exempted the lessor from liability for torts of the lessee resulting from the negligent operation and handling of its trains and the general management of the leasehold property, they hold the lessor bound for an injury resulting from the negligent omission of some duty owed to the public, such as the proper construction of its road, station houses, etc., and that where injury has resulted to an employee of the operating company by reason of a failure of the lessor to perform its public duty, as in the failure to construct a safe road, the injured employee may sue the lessor company as one of the public for its failure to perform that duty, and not because between himself and the lessor company the relation of employee and employer or any relation of contractual privity exists.

Accident—Injury—Expert Evidence.

The Supreme Court of Illinois held, in the case of City of Chicago vs. Didier, that where there is no dispute as to the manner of an injury, but the question is whether certain physical conditions were caused by the injury complained of, and the determination of the question involves a special skill of trade or knowledge of science that does not come within the experience of laymen possessing the education or knowledge common to those moving in the ordinary walks and engaged in the ordinary occupations of life, then persons possessing this special knowledge, skill or science may give their opinion on the subject. In this case the court permitted certain questions to be asked and answered by medical witnesses as experts touching the effects produced upon the body of the appellee by a fall on a sidewalk in the city of Chicago. It was undisputed that she was rendered unconscious by the fall, and the medical evidence objected to tended to show that certain internal injuries resulted therefrom.

Contract—Machinery—Breach—Damages.

The United States Circuit Court for the Western District of Georgia held, in the recent case of D. A. Tompkins Company vs. Monticello Cotton Oil Company, that where the defendant purchased cotton-seed milling machinery of the plaintiff to be installed by a specified time, and in contemplation thereof purchased large quantities of cotton seed, which deteriorated in value because of plaintiff's delay in installing the machinery, the defendant was not entitled to recover on a counterclaim losses resulting from the manufacture and sale of the seed products which might not have occurred had the machinery been installed in time. It appeared that the plaintiff, foreseeing that it would be unable to deliver the machinery in time, notified the defendant of that fact, and the court held that this circumstance made it the duty of defendant to reduce its damages to a minimum, and that it was not justified in purchasing such improvident quantities of seed as made it necessary to store the same on the ground exposed to the elements and charge the damage to the plaintiff.

Bill of Lading—Goods—Delivery.

In the case of Murphy et al. vs. American Can Company, recently decided by the Court of Appeals of Maryland, it appeared that the appellants sued the appellee for an alleged failure to deliver certain tin cans purchased and paid for f. o. b. at Baltimore. The cans were delivered to the captain of a sailing vessel which was driven ashore in a storm, and the cans were damaged and the appellants refused to receive them. The bill of lading was mailed to the vendees, together with a letter informing them of the delivery. This bill of lading was retained by the appellants. The court held that the appellants' conduct after receiving the bill of lading, and the information by letter of the delivery, showed an acceptance of the goods in transit, and also such a ratification of the delivery as to estop them from maintaining the action; that the loss caused by the accident must fall upon the one who owned the cans when they were damaged; that the bill of lading represented the goods described in it, and that an acceptance of the bill by the consignees therein named amounted to an acceptance of the goods represented by it.

Bank—Loan—Cashier—Liability.

The Kentucky Court of Appeals held, in the case of Citizens Bank et al. vs. Bank of Waddy's Receiver, that where there are no limitations on the authority of a bank cashier he can exercise powers within the apparent scope of his authority; that being the agent of the bank his acts within his official sphere are binding upon the bank, and he may borrow money in the regular course of the bank's business and pledge its property for the payment thereof; that a lending bank was entitled to a lien on the collateral pledged to it for the payment of its loan where it acted in good faith and there was nothing in the transaction to put it on notice that the cashier of the borrowing bank was exceeding his authority or misapplying the funds of the bank, or that the bank authorities were not regularly constituted and doing their duty, and that where a borrower from a bank in renewing his note left his own note with the cashier, who promised to get it and send it to him, but instead of doing so pledged both the old and the new notes to other banks to secure loans, the makers of the notes were bound to both of the banks as innocent holders of the paper.

BUSINESS NOTES.

White Oak.

The southern Appalachian region, including the Allegheny ranges and the plateaus which slope westward to the Mississippi and Ohio rivers, is now the chief source of supply of white oak, as well as the region of its greatest commercial importance. West Virginia, with an estimated stumpage of nearly 5,000,000,000 board feet, has more than one-third of the standing white oak in this region. The state of Kentucky still has over 2,500,000,000 feet, and Tennessee a little over 2,000,000,000 feet. Virginia and North Carolina follow next in order with over 1,000,000,000 each. White oak is one of the most widely distributed and commercially important trees of the United States, and its total annual product of over 2,000,000,000 feet of lumber is more than double that of any other hardwood. The wood is compact and close grained, hard, tough, strong, heavy, and durable in contact with the soil. By a peculiar mode of sawing by which the boards are cut nearly parallel to the pith rays, the silver grain is shown, furnishing the handsomely figured panels, ceiling and molding of "quarter-sawed" oak. White oak is the favorite timber for railroad crossties, and of the 90,000,000 ties purchased each year nearly one-half are of oak, the greater part of which are white oak. It is also an ideal material for tight cooperage manufacture. Other uses are for car stock, boards, planking, beams, dimension stuff of all sizes, shipbuilding, tool handles, wagon spokes, and furniture and basket veneer. Red oak and black oak exceed white oak in rapid growth and early maturity, but the latter has a marked advantage in its greater ability to withstand shading, in its longevity, and in its inherent resistance to decay, insects and fungi.

Our South American Trade.

Our South American trade in 1906-07 increased 12 per cent. over the previous year, and exceeded 1904-05 by more than 16 per cent. The value of this trade last year was $242,322,711, compared with $215,582,657 in the preceding year and $207,689,931 in the year previous to that. In view of the inadequate means of communication with the southern continent, this increase is all the more remarkable. A comparison of this commerce follows:

	1907	1906	1905
Exports	$82,157,174	$75,159,781	$56,894,131
Imports	160,165,537	140,422,876	150,795,800
Total	242,322,711	215,582,657	207,689,931

The exports to the important countries follow:

	1907	1906	1905
Argentina	$32,163,336	$32,973,359	$23,564,056
Brazil	18,697,547	14,530,471	10,985,096
Chile	10,195,657	8,667,227	5,391,357
Peru	6,075,739	4,833,307	3,657,225

The imports from the important countries follow:

	1907	1906	1905
Argentina	$16,715,325	$18,379,063	$15,354,901
Brazil	97,881,158	80,416,524	99,843,094
Chile	18,287,029	16,945,476	11,071,613
Peru	4,958,202	2,454,943	3,152,964

In the course of twelve months South America purchases from other countries $500,000,000 worth of goods. The United States' portion of this is only $82,000,000, or 16 per cent. The South American countries ship for sale to other nations about $750,000,000, of which the United States buys $160,000,000, or over 21 per cent., much more than we sell.

California's Cereal Crops.

California's cereal yields, particularly those of wheat and barley, will fall considerably below those of last season. According to the San Francisco *Chronicle*, "crops seem to have been undergoing a sort of retrograde movement, gradual but steady, for the past three or four months. In round numbers the production of wheat in 1906 was 325,000 tons, which was one of the smallest crops produced in this state; but the total for 1907, it is now known, will fall considerably below that low figure. At this time the highest estimates do not exceed 275,000 tons, while there are some well-informed authorities who are positive in their belief that the yield will not be over 225,000 tons. Probably the middle ground figure, 250,000 tons, is a fair estimate for the wheat crop. The early expectations for a bountiful yield of barley were more favorable than for wheat, but returns indicate that all estimates for barley will have to be liberally reduced. Where it was anticipated the state would produce over 500,000 tons it now seems certain the aggregate will not reach 450,000 tons. In some sections of the Sacramento valley there will be no wheat whatever, the ground being too wet to plow during the sowing season, while in others the plant made such a slow growth that it is now being cut for hay. In the great San Joaquin valley there was a large decrease in the acreage usually sowed to grain, and the same may be said of southern California. Along what is known as the west side of the San Joaquin there are some localities where there will be a fair yield. The prospects for wheat and barley are probably the best in the Salinas valley and in portions of Colusa and Glenn counties. The farmers of the state who have fair crops will, however, be able to sell their grain at remunerative prices. The selling figures at present prevailing are excellent from the growers' standpoint, and as California will be obliged to secure large quantities of wheat from Oregon and Washington during the coming year for actual home requirements, there is little probability that values will decline."

Recent Railway Legislation.

The *Railway Age* began on July 12 the publication of a comprehensive summary of the legislation affecting railways which has been passed by the various state and territorial legislatures at the sessions of 1907. "As nearly as can be ascertained from official sources, the total number of general laws affecting railways which were passed by the legislatures of thirty-two states and territories is 272. This does not include a number of special acts affecting individual lines. It may be noted that the following list does not include some states in which the legislatures met last spring. In these cases either it has been impossible as yet to secure official copies of the acts or no laws affecting railways were passed. In the place of laws in Oklahoma provisions of the proposed state constitution affecting railways are referred to. The revised list of the states and territories in which laws in reference to railways were passed and the number passed in each state is given below:

Alabama	16	New Jersey	5
Arizona	3	New Mexico	2
Arkansas	18	New York	3
California	1	North Carolina	9
Colorado	1	Oklahoma	5
Illinois	3	Oregon	2
Indiana	17	Pennsylvania	8
Iowa	15	South Dakota	15
Kansas	21	Tennessee	7
Maine	3	Texas	21
Michigan	5	Utah	6
Minnesota	24	Washington	2
Missouri	11	West Virginia	5
Montana	9	Wisconsin	15
Nebraska	15	Wyoming	1
Nevada	1		
New Hampshire	3	Total	272

Terre Haute, Ind.

Terre Haute, Ind., is a thriving town on the east bank of the Wabash, its population being 60,000, as against 36,673 in 1900. In the last three years the new manufacturing industries represent an investment of $3,500,000, and these give employment to over 5,000. The Commercial Club tells us that "for several years new dwellings have been going up at the rate of over 1,000 per annum, yet there are no empty houses, and more houses are being built at this time than ever before in the history of the town. There is not an empty business house in the city. It is within a few miles of the center of population. It is the pivotal point between the great western cities, being 178 miles from Chicago, 187 miles from Cincinnati, 168 miles from St. Louis and 161 miles from Louisville. Freight loaded for either place is delivered at its destination the following morning. Twelve railroad lines branch out in all directions, one more is under construction to Chicago, and still another will soon be built in a southwesterly direction to the Mississippi river. In addition to this a belt line clear around the city and connecting all lines is in operation, thereby opening up much good territory for factory sites. Besides this there is now in operation another belt line which connects all the lines. Sidings are laid to factories free of charge to them. Terre Haute is the center of and distributing point for the best coal fields in the west. Over 1,600 car loads are sent out from this point daily. It has coal under it and all around it. In Vigo county are 400 square miles of coal lands, containing 3,376,000,000 tons of coal, and within a radius of thirty miles there are 2,110 square miles of coal fields, containing 12,482,000,000 tons of coal. Coal is mined in abundance on all lines of railroad entering the city, and its value for all purposes has been fully demonstrated. The visible supply is good for 200 years. The water supply in and around the town is inexhaustible and is of good quality. Drilling from forty-five to eighty-five feet will furnish a supply large enough to meet any demand made on it. The city has over 200 manufacturing industries, employing 12,000 and representing an investment of $30,000,000, together with ample banking facilities."

CURRENT BUSINESS NEWS.

Commercial.

The British Foreign Office announces that the following places in Manchuria have been opened to international trade, viz: Fenghwangcheng, Liaowang, Ninguta, Hunchun, Sanhsing, Hailar and Aihun.

T. B. Wilcox, president of the Portland (Ore.) Flouring Mills, says: "The crop of the northwest will be the largest in the history of this section." He places the yield of wheat at least 55,000,000 and probably 60,000,000 bushels. "The season has been entirely favorable thus far and the quality promises to be excellent. A good portion of the northwestern crop will have to be marketed in Europe and prices cannot go above the export basis. The Orient will take about the usual amount of wheat and flour, but prices on the Asiatic account will be held down by the quotations offered by the Australians. The California demand will have a steadying effect on the market."

The Great Northern Railway Company announces that the farmers along its lines are in urgent need of 10,000 men to harvest the wheat crop in North Dakota. They are willing to pay good wages, averaging $3 per day. To help secure these men the company will give low rates for parties of ten or more daily until August 31 to practically all points on its lines.

According to Broomhall's foreign crop summary, the cutting of wheat in the United Kingdom has commenced and crop conditions are unchanged. In France harvesting is well advanced and reports regarding the outlook are favorable. Offerings are more liberal. Germany reports weather conditions improving. Heat is causing some damage to corn in Hungary and the crop is expected to be a medium one. Official information from Roumania indicates a surplus of 13,600,000 bushels of wheat. Some deterioration to the corn crop is noted as a result of drought. The first arrivals of new wheat in Bulgaria are of excellent quality, and indications point to a yield of wheat averaging 55 per cent. Offerings of new wheat in Italy are liberal. Harvesting indications in Russia are being fully maintained. The quality of the grain is good, but the movement is slow.

Broomhall reports that Bulgaria has prohibited exports of corn, oats and bran, owing to the poor prospects for the corn crop.

A cable from Buenos Aires states that Brazil, Paraguay and Bolivia have accepted the Argentine proposition for a uniform method in fighting the locusts.

Cable advices from Madrid are that the excess tax on American flour will be removed, and hereafter it will be imported under minimum tariffs of favored nations. This is expected to result in increase in American flour exports to Spain, as there is a considerable crop shortage this year.

The Michigan August crop report places the condition of corn at 80, against 75 last month and 87 a year ago, when the crop amounted to 60,000,000 bushels. The yield of oats per acre is estimated at 26 bushels, against 34 last August. This crop has been badly damaged. The wheat yield is placed at 14 bushels per acre, the same as last year, but the acreage is a trifle smaller. The condition of the bean crop is expressed by the figures 90.

Chocolate manufacturers are complaining of high prices for cocoa beans. They say that while the market should be bountifully supplied, they are compelled to pay prices above the normal for supplies.

A delegation of government officers identified with the operation of the tariff will be sent to Europe about September 18 for the purpose of making an investigation that ought to have a far-reaching effect upon the business of American importers and manufacturers, and may have an important bearing on tariff legislation. The delegation will consist of Assistant Secretary of the Treasury James B. Reynolds and United States General Appraisers Devries and Waite. The travelers will investigate in England, France and Germany conditions which govern market price, export price and the system of consular declaration of invoices.

Broomhall says: "An official Russian report for August 14 states that there has been very little change in crop conditions on the whole during the past month. Late grains have deteriorated somewhat in the northeast and Volga region. Winter wheat is generally of a medium quality. Rye of good average, and spring crops have improved and now show a good average condition."

After listening to the report of the executive committee, which stated that a good apple crop is in prospect, the International Apple Shippers' Association, in session at Atlantic City, adjourned Friday last to meet next year in Niagara Falls. The report gave an itemized summary from all the districts, and said: "Our best crops extend from Ohio and Michigan eastward through New York and New England, and up through Canada and Nova Scotia, showing considerable excess over the crop of a year ago. The Ben Davis district, as far west as Colorado, shows a heavy decline from the crop of last year."

It is reported from Boston that a temporary agreement has been reached, which will be concluded and put into force before the British Parliament adjourns at the end of the month, whereby the Newfoundland fisheries will be open to the fishermen of Gloucester the coming season. It is further given out from the same source that a permanent agreement has been reached on the Newfoundland fisheries question between Secretary Root and Ambassador Bryce, and that the same will without doubt go into effect during the coming year. It is understood that both sides will yield something in the new treaty, which is the first made between the two countries on fishing since 1808.

Prominent citizens from nearly every city and town along the Ohio river were present at the meeting in Pittsburgh Monday of the review board of the Engineers' Corps of the United States Army to consider the recently completed report of the survey of the Ohio river, providing for the improvement of the great inland waterway by its canalization from Pittsburgh to Cairo. Among the delegates were many congressmen, mayors of cities and heads of commercial organizations from the states most interested in the movement for a nine-foot stage of water at all seasons of the year. It was argued that the improvement was vital to the commercial interests of almost one-half of all the states in the United States, and that it would revolutionize the freight traffic of Pittsburgh and the entire Ohio valley.

Consul-General W. H. Michael, of Calcutta, states that the final figures of the Indian tea crop for 1906-07 show an increase in production of 18,000,000 pounds on an acreage no greater than that of 1905-06. In the following table from a business circular the exports from Calcutta and Chittagong from April 1, 1906, to March 31, 1907, are shown, together with a comparison for the previous twelve months:

To	1906-07	1905-06
United Kingdom	168,381,895	159,460,914
Australian colonies	9,640,036	7,591,136
America	12,978,431	14,006,939
Russia	19,479,302	11,624,915
Bombay and Persia	5,307,073	5,858,401
Sundry ports	5,596,977	4,578,343
Total	221,389,714	203,120,648

Figures compiled by the Bureau of Statistics in the Department of Commerce and Labor seem to indicate that the trade in canned meat is recovering from the depression into which it has been thrown during the past year or more. According to federal authorities the improvement is not purely temporary, but is the result of sustained effort on the part of the government as well as of the natural growth of confidence resulting from knowledge of our system of meat inspection. At all events the returns show a distinct and gratifying increase in the business. Shipments (in pounds) from Chicago to all quarters make the following showing:

	1905	1906	1907
May	13,927,950	14,091,825	3,734,625
June	15,265,875	11,715,600	6,353,550
July	8,732,550	4,830,975	8,979,600

The Department of Commerce and Labor, Bureau of Statistics, has issued the statement of the exports of domestic products for July. It is as follows:

	1907	1906
Corn, bushels	7,241,719	3,104,879
Corn	$4,397,501	$1,783,881
Wheat, bushels	2,071,169	2,309,234
Wheat	$1,868,242	$1,833,121
Wheat flour, barrels	978,242	935,595
Wheat flour	$4,096,617	$3,736,617
All other breadstuffs	$505,890	$398,388
Meat and dairy products	$16,804,395	$14,923,652
Cattle, hogs and sheep	$3,084,705	$2,626,683
Cotton, bales	84,674	176,433
Cotton	$5,301,339	$9,580,748
Mineral oil, gallons	100,513,361	87,987,328
Mineral oil	$8,194,342	$6,048,405
Total	$44,343,031	$40,937,495

Financial.

The New York State Tax Commission has announced a ruling that on all mortgages upon which loans were made after July 1, 1906, where the tax of 50 cents upon each $100 remained unpaid upon May 13, 1907, when the law was amended, interest shall accrue from that date at the rate of 1 per cent. per month. If advances were made subsequent to May 13, 1907, the interest shall be computed from the date of the advancement to the time of the payment of the tax.

G. M. Haffards & Co.'s statement of Fall River mill dividends for the last quarter shows total disbursements of $664,850, an average rate of 2.66 per cent., which is equivalent to an annual rate of 10.64 per cent. This is the biggest return to stockholders in the history of manufacturing in Fall River.

The members of the New York Cotton Exchange on Wednesday voted to close the Exchange on the Saturday preceding Labor Day.

The total internal revenue receipts for the last fiscal year, just compiled from returns to the Commissioner of Internal Revenue, were $269,664,022.85, an increase over the previous fiscal year of $20,561,284.85. The principal increase was from spirits, this being $12,942,846.77. The increase from tobacco was $2,388,078.81 and from fermented liquors $3,925,959.62.

It is understood that the Bankers' Trust Company has opened negotiations for the purchase of a controlling interest in the United States Mortgage & Trust Company. The purchase will not be made for some months to come, it is said, and the companies will continue, even in the event of an acquirement of control, as separate institutions.

On Thursday the Bank of England advanced its rate from 4 per cent. to 4½ per cent. The last change in the Bank of England rate was the reduction from 4½ per cent. to 4 per cent. on April 25. The rate had been reduced from 5 per cent. to 4½ per cent. a fortnight before, after ninety days of a 6 per cent. minimum. The advance in the rate is unusually early in any case, and is the more significant as the 4 per cent. rate has obtained throughout the summer, establishing a higher average than in any year since 1875. The rate was advanced last year in October, and in 1905 on September 28, while in 1904 there was no advance after April 21. With the single exception of 1900, during the crisis of the Boer war, the rate in recent years has not been advanced earlier than September or October.

The Consolidated Gas Company of New York has sold to N. W. Harris & Co. $5,000,000 of one-year 6 per cent. notes. The money is to be used for general corporate purposes, to complete the first unit of the gas plant at Astoria and for additional equipment for the electrical department of the business. It is understood that practically all the issue has been placed with investors at 99.

The Southern Pacific Company has applied to the New York Stock Exchange to list $36,000,000 additional preferred stock.

According to the *Wall Street Journal*, "the savings-bank depositors of the state of New York, with their combined funds, could buy out the entire textile industries of the United States, as given by the census of 1905. Total deposits of $1,394,296,034 could buy the whole of the corn crop of 1906 of 2,927,000,000 bushels, and have $228,000,000 left to take two-thirds of the winter-wheat yield. They could buy up the two biggest cotton crops that the country has ever grown, and have enough left over to take all of the cotton seed at $81,000,000. They could pay off all the outstanding stock and bond obligations of the New York Central, the Pennsylvania and the Baltimore & Ohio combined. Or they might not only get control of the stock of six lines with their funds, including the Atchison, Northern Pacific, Union Pacific, Southern Pacific and Great Northern, but could, in addition to these, buy outright the whole stock issues of the eastern coal lines, including the Lackawanna, the Erie, the Reading, the Norfolk & Western, the Chesapeake & Ohio, the New York Central and the Pennsylvania."

At a meeting of the Standard Oil Company of New Jersey, held Thursday, a dividend for the quarter of $6 per share was declared, which makes the dividend declaration so far this year $30 a share. The previous dividend was $9 a share. At this time in 1906 and in 1905 dividends of $6 a share was declared, the same as Thursday's, and the amount declared for 1907 to date is the same as for the same period in the two past years. In the full year 1906 the company paid 40 per cent.; in 1905, the same. Its highest recorded dividend rate was 48 per cent., in 1900 and 1901.

Industrial.

The production of asbestos in the United States in 1906 was 1,695 tons, valued at $28,565, as against 3,109 tons, valued at $42,975, in 1905. The imports in 1906 were valued at $1,076,170.

Total	17,534,741	17,004,368

The production of aluminium has increased in twenty years from 18,000 pounds to nearly 15,000,000 pounds annually, its production in 1906 having been 14,910,000 pounds. This increase in production was accompanied by a decrease in price from $15 to 37 cents per pound.

The *Petroleum Review* of London, in an article on the world's production of petroleum, says that in 1906 it amounted to 25,140,000 tons, as compared with 26,883,000 tons in 1905. There was an increase in all countries but America, which fell off 3,000,000 tons. Russia increased 500,000 tons.

Reports in Union Pacific headquarters and circles are that one of the results of the Harriman trip over the system is to arrange for immense iron and steel works at Laramie, Wyo., where the company now maintains steel works of a limited production. The company has just ordered to be built a branch line to the famous iron mountain in Wyoming, and other indications are that work will soon begin on the plant which makes Harriman lines independent of the United States Steel Corporation for its iron supplies. Years ago the Union Pacific rolled its own rails at Laramie, but for twenty years the mills there have been closed. Three years ago they were reopened for the rolling of plates, bolts and small iron.

The production of sheet mica in the United States for 1906 was 1,423,100 pounds, valued at $252,248, and of scrap mica as 1,489 short tons, valued at $22,742. These figures show an increase over those for 1905 of 498,225 pounds in quantity and $91,516 in value for sheet mica, and of 363 tons in quantity and $4,886 in value for scrap mica. The eight states which shared this production are, in order of value of output, North Carolina, Colorado, New Hampshire, Virginia, Idaho, South Dakota, New Mexico and Connecticut. The imports of mica into the United States in 1906 were the largest ever recorded, the value being considerably more than twice as great as in 1902 and 1905, the years that formerly held the record.

Railroads.

At a special meeting of the directors of the Lehigh Valley Railroad Company, Wednesday, the report for the fiscal year ended June 30, 1907, was presented and approved. This showed total gross earnings of $36,068,431, an increase over 1906 of $3,278,574. Operating expenses for the same period were more by $1,962,042 than the preceding twelve months, leaving net increase of $1,316,532.

Miscellaneous.

Milwaukee has a population of from 360,000 to 365,000, according to the new city directory. In last year's directory the city's population was estimated at 353,252.

The American minister to Portugal reports to the State Department that until recently foreigners visiting Portugal were required to present passports and to pay heavy embarkation fees before being allowed to leave by sea. These regulations were modified recently by a decree dated April 27, by which passports are not required for foreigners entering or leaving Portugal, except when international treaties and conventions are to the contrary, or grave circumstances of public order demand it.

Immigration in July was 97,132, an increase over July, 1906, of 12,729.

Quotations for Government, State, Railroad and Miscellaneous Bonds, Week ending August 15.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Growing crops show further good progress toward harvest, and fall trade tends to expand at leading western and eastern jobbing centers. Best reports naturally come from sections nearest surplus crop-producing regions, as, for instance, the northwest and southwest, and there is no apparent decline in demand visible in those sections, but the influences of tight money, stock market unsettlement and the telegraph strike are visible, more especially at the east, where conservatism as to buying for future needs is more immediately in evidence, confirmed as this feeling is by the knowledge of the already large volume of orders secured. Cross currents are visible in different industries. Thus, while finished cotton fabrics are in demand and some makes, notably bleached goods, have been further advanced, there are reports of smaller demand and lower prices for cotton yarns. Again, in woolen goods, while high-grade worsted and fine woolen fabrics have sold well, other grades are slower of sale, and there is talk of accumulation. In the leather trade there is more life than of late, and good quality leather and hides are on better sale, as are also high-class shoes; low grades are slower of sale, and eastern shipments so far are 4 per cent. behind 1906. In iron and steel the lack of new buying is still notable and prices tend to ease, as the mills and furnaces find deliveries easier to make. There are some very favorable features that deserve mention. Thus July gross railway earnings complete show a gain of 11 per cent. over July a year ago, which in turn gained 14 per cent. over the same month of 1905. Bank clearings are larger than last week or last year, mainly, perhaps, due to heavy clearings growing out of active stock speculation at lower prices, but it is to be noted that gains over a year ago are still very general at outside cities.

The influence of warm weather and clearance sales is reflected in reports of larger than ordinary August retail trade, and the position of this class of trade has been measurably improved thereby, with a not unfavorable effect on collections, which are, however, irregular. There is something like a general hardening or advance in time loans at leading cities, with a degree of repression noted by bankers in extending new accommodations.

The strike of telegraphers was an unsettling feature to trade early in the week, most effect being noticed in the operations of exchanges and upon prices of staples speculatively dealt in, but toward the close of the week this abated greatly and messages were coming through with only a fraction of the delay noted earlier in the week. The wide extension of the telephone and the improvements in mail service have put the country in a very different relation to the telegraph service than it was at the time of the last general strike of telegraphers, in 1883.

With the exception of the weather being too hot and dry in portions of the southwest, notably Kansas, Oklahoma and Texas, thereby affecting corn and, to a smaller extent, cotton unfavorably, the general consensus of the crop reports to BRADSTREET'S is quite as favorable as for some time past. These reports, continuing the story told by the government report of August 1, point to crops short, it is true in most cases, of last year, but still little below the average of recent years, and much better than the prospects two months ago indicated. Good weather for threshing winter wheat has been experienced, and the movement, though late, is now heavy. In spring wheat the crop is one week nearer harvest, with little impairment in condition, except that alternate heat and cold are reported to have done some damage in parts of the Dakotas. There is still talk of rust damage, although the crop is now too far advanced to be much hurt. Harvests in eastern Washington have been completed and large yields are realized. Oats yields are thin and short, as heretofore reported. Corn, except in parts of Oklahoma, Kansas and Nebraska, has made good progress, but in the states mentioned and in Arkansas temperatures of 100 to 110 degrees have done some damage. Cooler weather later with some rains has helped even there. In the large surplus states of the Mississippi valley the crop has done well. In parts of New York the recent dry weather has not helped the undersized corn plant. Reports as to the cotton crop are, in the main, very favorable, being best in the south Atlantic and eastern gulf states, but there are reports of shedding in Texas, and the weather is also too dry in parts of the Memphis district.

Heavy movement of new crop, disorganization growing out of the telegraph strike, and influences of the break in the stock market, were all reflected in the wheat market this week, resulting in sharp breaks and heavy liquidation, with prices falling 3 to 4 cents on Monday and Tuesday, and the lowest prices touched for two months past. At the decline much new buying power was uncovered, and export business was reported the heaviest for nearly a year past. Flour also went lower, quotations falling 15 cents, and a better business was reported, more life being manifested than for a long time past at leading milling centers. Later on there was a slight rally from the low point, but the feeling appeared to be that the trade had gotten out of the rut it has long been in. Corn and oats sympathized slightly with the early weakness in wheat, but strengthened later and on the whole were very steady, though closing slightly below last week. Provisions eased this week, pork going down 25 cents. Cotton-seed oil lost 2½ cents. Dairy products are unchanged on the week, but are slightly above the opening prices of the month.

The influence of the slump in the stock market was clearly shown in the decline in cotton prices, offsetting as it did reports of continued hot weather in Texas with no rain. The telegraphers' strike also was limiting in its effect on speculation, which feels the absence of public buying power. Comparing as prices do with those ruling on last Friday, when the market was under the stimulus of hot-weather reports from Texas, values show a sharp loss for the week, August delivery being off 40 points, October 36 points lower, and December 37 points off. Spots are, however, only 15 points lower on the week.

All pig-iron markets remain quiet, and the tendency as regards prices is to seek a lower level. Basic pig iron is also weaker, but a buying movement is expected to develop in the east within a fortnight or so. Steel mills are favored with good-sized orders previously placed, but new business tends to decrease. Demand for steel rails is fair, and structural material is in pretty active request. Trade in tinplates has not been as good as was anticipated. Makers of galvanized sheets are making poor deliveries owing to the overcrowded condition of the mills. Fall business in wire and wire nails is opening earlier than usual and demand is very active. Old material continues weak. Coke is in good demand. Soft coal of the better grade is active, and there is a disposition to believe it will become scarce as the season advances. Copper, tin, spelter and antimony continue to touch lower prices. Business in copper is inactive, and although electrolytic has been quoted at as low as 18 cents, consumers still hold aloof from the market, and it is said that an even lower price has been quoted.

Stock market prices at New York have rallied and show renewed firmness, after having passed through another spasm of liquidation with the lowest prices of the year, due to nervousness regarding governmental action against railroads and high rates for money, particularly on time, the raising of the Bank of England's rate being an additional unsettling influence. The subsequent recovery rested on better buying and alleged assurances that the President would define his policy toward corporations in a more reassuring way. Foreign exchange showed steadiness for short sterling at around 4.86.50, while long bills had a sharp decline on the advance of money at London.

The government crop report as of August 1, reduced to quantitative figures in bushels, points to a combined yield of all cereals 9 per cent below last year, wheat losing most, because of the severe winter and cold early spring. Wheat yield promises a decrease of 13 per cent., oats 6 per cent. and corn 10 per cent. loss from last year. Hay almost alone promises a better yield, 7 per cent. gain over 1906. Fruits, especially apples and peaches, are not promising, according to the government report.

Bank clearings for the week ending August 15 aggregate $2,761,355,000, 4 per cent. over last week, and 6 per cent. over this week last year. Outside of New York exchanges amount to $1,045,997,000, about one-tenth of 1 per cent. under last week, but 10 per cent. over the week last year.

Business failures for the week ending August 15 number 146, against 157 last week, 143 in the like week of 1906, 147 in 1905, 203 in 1904 and 166 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending August 15 aggregated 2,947,433 bushels, against 3,272,993 bushels last week, 2,827,954 bushels this week last year and 9,039,761 bushels in 1901. For the first seven weeks of the fiscal year the exports are 18,911,193 bushels, against 14,928,225 bushels in 1906-07 and 45,334,545 bushels in 1901-02. Corn exports for the week are 1,441,727 bushels, against 1,107,621 bushels last week and 525,773 bushels in 1906. For the fiscal year to date the exports are 10,711,959 bushels, against 5,104,110 bushels in 1906-07.

IN CANADA.

Good results from crops already harvested and prospects of a northwestern wheat crop little below a year ago are stimulating fall trade in Canada, and the only real drawback is the stringency of money, which continues tight, with little prospect of early easing. Canadian securities have felt this, and also sympathize with the break in New York. Wholesalers report demand good and shipments large from Montreal. Heavy fall goods such as blankets are doing well. Linens are firm, and groceries, hardware and export trade are all improving. Toronto reports more activity in general trade, dry goods are better than expected, crops in the Province of Ontario turning out well, and high-priced millinery has been ordered freely. Money is tight and relief distant, with collections fair. In Manitoba a wheat crop close to last year's is looked for. Fall trade has not yet opened, but looks well. In British Columbia a good business is doing all along the coast, shipping trade is expanding and collections are good. Textile goods from the east are complained of as being delivered slowly. Lumbering and mining are active. Clearings for the week aggregate $81,173,000, a gain of five-tenths of 1 per cent. over last week and of 13 per cent. over this week a year ago. Failures for the week number 30, as against 18 last week and 22 in this week a year ago.

TRADE REPORTS.

In New York business in nearly all branches of the dry-goods trade is active, and exceptionally good orders have been received for spring delivery in silks and dress goods. Demand for cotton goods continues, and prices are more than well maintained, advances still being steadily made in some lines. The opinion, however, is generally expressed that it would be much better if prices remained firm without any further advance, as this would give a healthier and more confident tone to the market. Collections are good. In woolens for men's wear, business, while satisfactory, is hardly up to expectations. In clothing a fair amount of business was done this week, but collections are backward. Demand for cotton yarns has fallen off considerably and buyers have no difficulty in securing requirements. A slight concession in prices is reported. In the cloak, suit and waist lines business continues brisk, collections are good and large fall orders are being placed. The retail trade is busy with its end-of-the-summer sales. Manufacturers of shirts and men's neckwear are busy on early orders, and business at wholesale in hosiery and knit goods is very active and prices are firm. In wholesale groceries trade is not up to the average for the season and is confined to actual needs. Retailers also find business dull, though there appears to be a good demand for olive oils and sardines. Supplies of live stock and dressed meats are fully equal to the demand and in the export trade there is little activity. The price of eggs has advanced 1½ cents, although receipts are fully equal to requirements. Butter is steady. Peaches and small berries are scarce and prices are high. Flour receivers report sales easy on any concession and efforts to advance the price are only successful when an advance in wheat forces the jobbers to action. Exports of binder twine are of small proportions. American hemp twine is in good demand and very firm. In the hardware trade there appears to be some inclination to cut prices, as it is understood that in the local market copper has been offered at 18½ cents per pound. Should this price hold it would seriously affect dealers carrying large stocks of that metal. Manufacturers of structural steel are behind in their orders, but pig iron is quiet. Lead is inactive and pig tin is being offered at lower prices. Orders for machinery are liberal and collections are fairly good. There is little activity in the anthracite coal trade, though the smaller sizes are in good demand. In the tobacco trade buyers have been picking up odds and ends of old stock, as little of the new crop has yet come to market. Summer business in the paper trade is better than usual and prices are steady.

The following telegrams show trade conditions at the cities mentioned for the week ending August 16:

BOSTON.—The distribution of dry goods for fall by jobbers is under way and will continue actively through this month and early in September. Jobbers here are generally well protected for their fall business, having ordered months ago. In the primary markets there are practically no goods to be obtained for immediate or early deliveries, the mills generally being sold up for several months to come. Cotton goods continue to advance. On Wednesday fruit of the loom was advanced from 11½ to 12 cents. In 1899 the price of this fabric was 5¼ cents. Advances on other lines of cloths are expected to soon follow. All lines of cottons are very firm, and production is limited by the scarcity of skilled help. Dress goods are in active demand and firm in price. Silks have been advanced in price and are in good demand. Broadcloths are strong. In men's wear, worsteds are most wanted, and hold their popularity as they have for the last few years, but demand for woolens shows no substantial improvement. Trade in men's clothing and furnishings at wholesale is active, and indications are favorable for a large fall business. Leather is more active, some good sales of grain and patent side leathers having taken place recently. Manufacturers of the better grade of shoes are obtaining a better return from sample orders than those who make the coarse and cheap grades; prices are firm. Tanners are appearing to be more interested in recent take-offs, but do not care to take long-haired hides at concessions. Business in furniture is fairly good and dealers anticipate a large fall trade. A fair volume of business is being done in electrical supplies, but collections continue slow. Lumber

is quiet. Hardwoods show more activity than other lines. For the dull season the hard coal business is very fair. Soft coal in best qualities is in light supply, and dealers are likely to find difficulty in getting orders filled when they realize the fact. Iron and metals show no material change in prices, business being generally light. Wholesale liquor dealers report trade rather dull, owing to hot weather. Brewers are busy, as there is a good demand for ale and beer; collections are fair. Demand for leaf tobacco is moderate, but prices continue high.

PROVIDENCE. — General business, including manufacturing, wholesale and retail lines, is normal, with good prospects for fall trade. Collections are good.

PORTLAND, ME.—Summer travel is now at its height and weather conditions are better. The hotels are well filled. Trade in general is good. Collections are up to the average.

PHILADELPHIA.—There is little change in the wool market, trading being comparatively light but prices steady. Cotton-yarn houses complain of dull business on new contracts, but have deliveries to make on old orders, and spinners seem to be sold up for some months. Dry-goods jobbers report a good out-of-town trade, but local retailers are not busy and collections are irregular. Leather is quiet, with a shading off of prices. There is a full supply of hides and skins and prices are off, but there does not appear to be much demand. Shoe manufacturers report a decreased volume of business compared to the corresponding period last season; dealers have a fair trade and prices are firm. Tobacco prices are firm and may go higher. The strike by cigar makers in Cuba to be paid in American money, settled a week ago, means a difference of 9 cents more on every dollar. Liquor sales are light, as usual at this season, but dealers do not seem disposed to shade prices much. Distillers are about ready to contract for fall production; prices of new goods do not appear to have been fully determined, though grain at present is high. Paints are somewhat more active than usual at this time, the backward season in the spring having an effect; prices are steady. Glass sales are about normal and at regular rates. Chemicals and dyestuffs have been quiet for months and are still further affected by the countermanding of large orders for textiles from the west, though steadied in a measure by some buyers of large resources and experience, realizing prices are down, placing orders that will carry them well into next year. Old stocks of flour are pretty well cleaned up and sales just now are light, users waiting for new goods, which they have reason to think will be lower. Lumber orders were few and small in July, but trade is reviving through August, though rates on yellow pine are soft, firm enough on hardwoods, and a generally better feeling noted, though collections are slow. The usual summer dullness prevails in the coal trade. New business in iron and steel is slow, and pig iron is lower in price than when orders, now being delivered, were placed.

BUFFALO.—Trade in wholesale, retail and jobbing lines is satisfactory. Favorable weather has helped retailers, and collections are fairly satisfactory.

BALTIMORE.—Considering the season, trade in general has been fairly good. An increase is noted in the number of out-of-town buyers in town, and in some lines salesmen have returned from the road to look after home trade. Although buying is disposed to be conservative, very satisfactory orders are being placed, and the outlook for a good volume of fall business is bright. Collections continue disappointing, but as crop conditions are reported favorable, improved conditions in this respect are looked for shortly. The season in fertilizers is backward owing to the late spring, and orders are being placed in only moderate volume, but manufacturers anticipate a good fall business. Trading in crockery, glassware and woodenware is fairly active. Good orders are being placed for boots and shoes, with demand largely for better grades; values are very firm. Paper and stationery at wholesale are quiet, with prices unchanged. Business in hardware and harness has been of moderate volume. Dry goods and notions are active at firm values, with mill deliveries still backward. Fall openings have commenced with jobbers in millinery, who, from indications, will have an exceptionally good season. Business in lumber is fully up to this period last year; mill deliveries are not so heavy, but fair stocks are in yards and prices are well maintained. Trading in drugs at wholesale is brisk. Wholesale groceries are fairly active. Canned goods are lower. Egg receipts are light and prices higher. Poultry is dull, with receipts heavy. Oils and turpentine are steady, with demand light. Receipts of leaf tobacco are heavier and the market is active and strong. Clothing manufacturers report good orders, with outlook encouraging and present business fully up to the fall trade of last year.

CINCINNATI.—General retail trade is better than usual, when the dullness incident to the month of August is considered. Dry-goods jobbers expect a larger fall trade than a year ago. Clothing manufacturers are very busy, while those lines of jobbing such as groceries, tobacco and queensware, selling within a radius of two hundred miles, are much encouraged by the continued improvement in crops. The whiskey trade, although handicapped by adverse legislation in many states, is preparing for a busy fall and winter trade. Machinery manufacturers are in some cases working overtime. The telegraphers' strike is not yet very serious in effect, but the outlook causes some concern in business circles.

CHICAGO.—Distribution and consumption of goods is satisfactory, and the former has increased slightly. Dry goods are being bought with increased freedom; supplies of cotton goods in hands of jobbers are hardly above the average, and prices are higher. Clothing and shoes are being ordered moderately. Inquiries for pig iron are light; there is no change. Southern irons are easy. Bar steel, structural material and steel rails have been bought moderately. Coal is in fair demand for the season, with more disposition on the part of western dealers to load up. Business with lumbermen is fair, but behind last year. Groceries are having a fair sale, but no more than ordinarily at this time of year. Butter, eggs and potatoes are lower, but cattle and hogs are higher, while sheep are lower. Receipts of cattle and sheep increased; those of hogs decreased. Money is firmer, demand is good and shipments of currency to the country are increasing. Banks are closely loaned up and are holding back in anticipation of a call for a statement from the Comptroller of the Currency. Collections are fair. The corn crop has been injured in Kansas and southern Nebraska by temperatures of 100 to 108 in the past week, but within the last few days temperatures have fallen and showers have prevailed, which have slightly relieved the crop. In other sections corn has done well, particularly on the best cultivated lands in Iowa. Cutting of oats has been general, and the crop is mostly harvested in the central regions and is well under way in the northwest. Yields are disappointing, ranging from fifteen to twenty-eight bushels in most instances and averaging twenty-five to twenty-six pounds to the bushel. Slight injury has been done to spring wheat by premature ripening, due to extreme heat, in North Dakota the last part of the past week. Scattered reports of black rust come from South Dakota, but the crop is so well advanced that little injury is expected. The hay crop is a large one, the government figures indicating 61,000,000 tons, an increase of 4,000,000 tons over last year. Winter wheat is moving moderately, and oats are just beginning to go to market. Farmers are selling very little corn.

INDIANAPOLIS.—Crops in general are doing well, with the exception of oats, which are said to be light in weight and not of good quality. Practically all late fruits are maturing in good shape, and it is believed the yield will not be far from normal in quantity. In the wholesale grocery trade the volume of business done the last few months is said to exceed that of the same time last year. Collections in the city are somewhat slower than they have been for some time, but in the country they are excellent. Wholesale millinery has its dull season now. Business during last season was very fair, and the prospects for next season are considered good.

ST. LOUIS.— House trade is especially active. Country merchants, principally from Texas, Indian Territory and the adjacent country, are here in goodly numbers, and orders placed for immediate shipment are liberal. Business in dry goods, notions and kindred lines is larger than for several years at the same period. Hats and gloves fully equal last year. Millinery reports more buyers in the city than ever before at this season. Orders have been exceptionally liberal, and demand for better grades of goods is increasing. Manufacturers of trunks, traveling bags and leather specialties are busy on orders now in hand; prices are firm and well maintained. In clothing, fall orders are being shipped, and from present indications business this year will exceed last year's. Manufacturing jewelers report business in their line very satisfactory; prices are firm and collections are good. In shoes the volume of business shows a decided increase over last year at steady prices. Groceries, drugs, paints, oils and kindred lines continue active. Lumber is quiet at lower prices. Building material is in fair demand at fluctuating prices. Hardware continues to occupy front rank, with an upward trend in prices. Among department stores cut-rate clearance sales continue, and summer stocks are being greatly reduced. On the whole the business outlook for the year is very satisfactory. Money is in good demand.

KANSAS CITY.—General trade is better than usual at this time of year, with a favorable outlook for fall. Collections are active. Growing corn is making excellent progress.

MILWAUKEE.—Trade is satisfactory for midsummer. Collections are fair.

DAVENPORT.—Trade is quiet, as is generally the case this time of year. The barley and oats crops will be short of last year, but the difference in price will probably make up the loss. Collections are slow.

SIOUX CITY.—General business is satisfactory. The outlook for fall trade is good. Rates are unchanged.

SIOUX FALLS.—Harvesting of the wheat crop is well advanced. While the yield has not been determined as yet, better than an average crop is expected. On account of the price prevailing, it will net considerably more than last year's crop. Corn is making rapid headway.

ST. PAUL.—Business continues to progress in all lines. Sales are greatly in excess of those of 1906. Dry goods, hardware and shoes are receiving heavy orders for shipment, and few cancellations are being received. Collections are only fair at this time, though they were quite good up to the 12th. Crop conditions are being greatly exaggerated from North Dakota, evidently to induce laborers to go there for the harvest, there being a great scarcity of help on hand. There are many points in North Dakota where the crop is poor, and very little harvesting has been done so far, although next week harvest will be general for small grains. In places the crops vary even in adjoining fields, so that estimates of yields are hard to obtain. Farmers are relying on the present price of wheat to continue, so that the shortage will be as remunerative as last year's crop. Flax, barley and oats are, on the whole, fairly good, although in places even these fall short of what is considered a fair crop. Hail has done more or less damage to crops in several sections, but will not have an appreciable effect, on the whole. The intense heat delayed the ripening for a few days. If frost holds off until well into September and all products in sight are harvested, the present stimulus in business will continue with more vigor, and this market will have an unprecedented growth in supplying the many new fast growing towns in North Dakota.

MINNEAPOLIS. — While the early part of August is usually somewhat quiet in mercantile circles, it is less so this year, and general business has a very healthy tone. Demand for staples in all lines is excellent, and warmer weather is helping to deplete stocks of seasonable goods. Demand for lumber is lessening, but will be more brisk after harvest. Flour is quiet, buyers only ordering for immediate use. The harvest is one week nearer. The weather has, on the whole, been conducive to growing crops, but the weather of the next few days will be watched with great interest.

OMAHA.—Wholesale and retail business and collections are fair. Corn is doing well. The weather is more favorable for threshing wheat; yield and quality are very good. Oats are below the average.

OKLAHOMA.—Corn is in good condition and promises a fine crop throughout the southern, western and northwestern portions of the state, but is suffering from drought, and is likely to turn out a small yield in the northeastern and eastern portions, or in one-fourth of the region embraced in the two former territories. Cotton is doing well during the present period of heat and dry weather, but the plant is small and indicates that the crop will fall below the average in yield per acre. Trade in all lines is dull.

CHARLESTON, S.C.—Wholesale trade continues good, and jobbers are exceedingly busy shipping fall orders. The cotton crop is in excellent condition, and without any setbacks will exceed that of any previous year. Retail trade is somewhat quiet. Collections are fair.

RICHMOND.—The business being done by wholesale dealers in groceries and provisions equals that of last year. Wholesale dry-goods dealers continue to receive satisfactory orders for future shipment. Prices for lumber and metals continue to show declines. Retail trade is fair and collections show slight improvement. The apple crop in Virginia will be about the average from present indications. Cotton in North Carolina continues to show improvement, and indications at this time are that the crop will be an average one.

SAVANNAH.—Rains in some sections during the week slightly damaged cotton, but generally speaking it is good, and a large yield is expected.

AUGUSTA.—Wholesale trade shows decided activity over last week. Jobbers anticipate a considerable increase in business over last year, owing to very favorable crop conditions throughout this section. Retail trade is only fair, owing to the large number of residents away from Augusta for the summer months. Collections are steadily improving. The cotton crop in the Augusta district seems very encouraging, the plant looks healthy, has had and is having very favorable weather. A large corn crop is anticipated.

ATLANTA.—Wholesale dealers report fairly active business, and some houses state that their sales show an increase over the same time in 1906. Some pessimistic views over the result of the passage of the prohibition bill, which goes into effect January 1, 1908, are expressed. Dealers in plumbers' supplies report a large decrease during July in city business, but say their country business is on the increase. Cotton appears to be in fine condition, is heavily fruited, and with a late fall the opinion is expressed that the yield will be up to the average.

JACKSONVILLE.—Retail trade is as good as usual for the season. Wholesalers report an increase of business over last year and are prepared for a large fall trade, which they confidently anticipate. Collections continue slow. Building is unusually active for the summer. Lumbermen are dissatisfied with prevailing prices, and many mills have shut down in the hope of improving the situation. The Florida East Coast Railroad has closed its shops at St. Augustine, and is said to have discontinued extension work to Key West. The cotton crop is in much better shape than it was at this time last year, and rains are seasonable.

CHATTANOOGA.—Trade conditions are favorable. Collections are good.

BIRMINGHAM.—Southern foundry No. 2 pig iron is weak at $21 per ton for present shipment and the market is not so active as heretofore. Trade in general is quiet, with collections slow. Farm prospects continue to improve.

MOBILE.—Ideal weather for cotton prevailed during the week. Country merchants look for a good crop and are placing orders more freely;

collections are also better. Besides the telegraphers' strike, the longshoremen and the machinists for the Louisville & Nashville Railroad Company are on strike. The longshoremen's dispute, however, appears to be in a fair way for an amicable adjustment.

MEMPHIS.—Retail business is quiet. Merchants are working off summer stocks at reduced prices. Wholesale business is gradually improving. Collections are slow. Crop reports vary. Some sections had beneficial rains and report progress, but in other sections crops are suffering from lack of rain.

NASHVILLE.—Midsummer dullness is reflected in all lines of trade, and the depression of the eastern financial markets has been felt by investors here. Retail trade holds up well, but jobbers are having a quiet business, except in staples, which are steady.

LITTLE ROCK.—Trade in most lines continues fairly good, and collections are improving. Although cotton has not been materially injured by the unusually hot and dry weather, corn has been badly damaged, and a general rain is much needed.

NEW ORLEANS.—General trade is dull. Crop conditions are favorable.

DALLAS.—Hot, dry weather has prevailed throughout this district during the week, and, while cotton is reported shedding, the general opinion at this time is that the outlook is for a good crop. For the season trade is fairly good, but collections are quite slow.

SAN FRANCISCO. — Reconstruction work is being pushed to finish before rains commence. Business conditions show some improvement, but collections are still slow.

TACOMA.—Indications point to an active fall and winter trade. Logging camps will resume in September. Collections are fair.

PORTLAND, ORE. — Business in all lines continues good.

SPOKANE. — Business continues good in all lines, with collections fair to good. Harvesting is progressing favorably and the yield is large.

TORONTO.—There is more activity in general trade. Wholesalers are busy sending out fall lines and they report an unusually heavy business being done. The total volume is heavier than that of last year. It had been expected that the dry-goods trade would have been somewhat lighter on account of the late arrival of warm weather and the delay that was experienced in moving stocks of summer goods. There has been an excellent trade in these lines during the past few weeks, however, and the situation has brightened in this respect. Crop prospects are looking well in all directions. Despite reports of damage to western grain fields, it is now generally believed that the crops will turn out a good average yield. Ontario crops are looking well, and harvesting progressing favorably. All this is imparting a tone of confidence to business men here and throughout the country. Money is very tight, and relief in this connection seems to be as far off as ever. Other branches of wholesale trade report a good seasonable demand for all lines, and in almost every direction prices may be said to show marked firmness. Preparations are under way for the fall millinery trade. Orders are already large, and to a surprising extent do they run into the more expensive lines. This was hardly looked for, as the tightness in money was expected to have foreshadowed a period of economy. Country trade is a little quiet and will continue so until after harvest. Collections are fair.

MONTREAL—General business moves along well. Demand for wholesale stocks is heavy and big shipments are going forward. In this connection the prophecies regarding a heavy fall business are being well borne out. The whole country is reflecting the optimistic tone in western Canada, induced by generally excellent crop conditions. The stringency in money continues as bad as ever. Canadian securities have been seriously affected by this factor and by the declines in New York. Collections are generally fair, and where renewals are granted it is at considerably higher figures than have ruled for some years. The dry-goods men report that fall and winter goods are going out well. Ordering is generally heavy, and it would now appear that the late arrival of warm weather did not, to as great an extent as was expected, visit serious results upon retail trade. The demand for blankets and general heavy lines is very brisk. These goods, like most other textiles, are being delivered but slowly, and prices are firm. The firmness in linens is one of the features of the trade. The grocery trade is beginning to show a better tone after the holiday season. Fairly good shipments are being made and values generally hold firm. A good business is opening out in all lines of hardware. The railways still find difficulty in obtaining desired supplies and values are firm. Business in small goods is also heavy. There has been a better tone to the shipping trade during the past month, and exports are now reported heavier than was the case earlier in the season. Country retail trade is fair.

VANCOUVER-VICTORIA. — Excellent business is moving in all lines here and along the coast. Retail trade is quite brisk and wholesalers report a very active demand for all lines. The lumbering and mining industries continue exceedingly active, and the call for supplies is heavy. Collections are good. The shipping trade shows steady expansion, the season so far having been an excellent one. There is some complaint about the slowness of textile deliveries from the east. Values in all lines are firm.

WINNIPEG.—A fairly good volume of business is moving here at the present moment. At this season of the year there is always a quiet tone to the ordering, but shipments are being made and heavy quantities are arriving from the east. In dry goods these arrivals are slow, but it is hoped that everything required will be on hand before the opening of the season. The crop outlook is generally very encouraging. Wheat looks well and harvesting is drawing near. The total crop is expected to prove fairly close to last year's figures. Should it go behind somewhat, higher prices for grain will offset the shortage. Business men here profess to see reasons for easier money this fall, but at present the situation is unchanged.

Money Market.

While shipments of money to the west and south showed a slight tendency to decrease temporarily, the New York banks continued to lose through such withdrawals, and preparations for further demands of the same kind render institutions very unwilling to make time loans, notwithstanding the inflow of money from the Treasury, which on the general estimate made the net gain to the New York banks about $2,000,000. The announcement attributed to Secretary of the Treasury Cortelyou, that he had decided to follow his predecessor's policy and increase the deposits in national banks whenever the requirements for crop-moving purposes or general business rendered it advisable to do so, had a good effect upon sentiment, and the heavy liquidation at the Stock Exchange this week, which fortunately was unattended by any symptoms of financial weakness, has undoubtedly caused a further considerable shrinkage in the volume of loans. Throughout the week call money has been abundant, and renewal rates declined from 4 per cent. to 3 per cent. On the other hand, time money has been scarce, the offerings by local lenders being scanty, and some institutions, it is recorded, decline to consider any business in that line. As a result loans up to three months have been quoted at as high as 6½@6 per cent., while for six months 7 per cent. has been insisted upon by lenders. Business at these figures has, however, mainly been confined to foreign bankers, although the advance of the Bank of England's rate on Thursday from 4 to 4½ per cent. was a distinct notice that the London market was determined to protect itself against borrowings by New York, the reports from that city being, furthermore, to the effect that at London there was not a little discrimination against American finance bills. Commercial paper has naturally been very dull, the rates for double names being 6½@7 per cent., at which figures there has naturally been little in the way of actual transactions.

New York Banks.

While last Saturday's bank statement displayed a decrease of $5,312,100 in cash, which was considerably larger than the indicated actual loss, this was attributed to the effect of the average system bringing over a part of the decrease in the preceding week. The principal feature of the statement, however, was a reduction of $16,497,400 in the loans, which was attributed to a continuance of transfers of borrowings to foreign bankers, and also in a large measure to the liquidation which had been in progress during the week at the Stock Exchange. The decrease in the deposits of $22,327,300 agreed fairly well with the changes in the loans and cash, and as a result thereof the reserve required was $5,599,450 less than the week before. The surplus reserve accordingly showed an increase of $287,350. The figures of the statement compare as follows with those of the preceding week.

	August 10	August 3	Changes
Loans	$1,110,453,300	$1,126,950,700	D $16,497,400
Specie	206,346,700	210,339,700	D. 3,993,000

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending August 15 shows an aggregate of $2,761,355,000, as against $2,658,741,000 last week and $2,587,018,000 in the corresponding week last year. Canadian clearings for the week aggregate $81,173,000, as against $80,715,000 last week and $71,632,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	August 15	Inc.	Dec.	August 8
New York	$1,715,358,000	4.7	....	$1,609,439,000
Chicago	224,088,000	11.9	....	225,717,000
Boston	148,764,000	10.3	....	116,842,000
Philadelphia	123,845,000	....	5.6	137,632,000
St. Louis	59,588,000	10.1	....	53,027,000
Pittsburgh	49,705,000	13.8	....	49,721,000
San Francisco	43,356,000	....	1.2	41,596,000
Baltimore	27,517,000	12.4	....	28,953,000
Kansas City	33,553,000	32.5	....	30,687,000
Cincinnati	25,411,000	7.1	....	26,074,000
New Orleans	14,737,000	4.7	....	13,574,000
Minneapolis	19,021,000	50.0	....	18,651,000

Foreign Exchange.

The hardening of discount rates at London, in anticipation of the raising of the Bank of England's discount rate from 4 to 4½ per cent., which went into effect on Thursday after the meeting of the directors, produced a decided decline in quotations for long sterling exchange at New York early this week. In consequence of this the posted rate for sixty-day bills was reduced ½ cent on last Tuesday. At the same time actual rates for demand sterling hardened, there being a limited supply of commercial bills and an absence of offerings of loan bills. It was stated, in fact, that the advance in the English bank rate was made mainly as a means of discouraging the placing of American finance bills in the London market, and that the decision was not made until after an unusually protracted meeting of the directors. The inquiry for remittances here was, however, somewhat slow on account of the high rates for money on the market for sight bills, would probably have had a further advance.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Aug. 10	*Aug.* 12	*Aug.* 13	*Aug.* 14	*Aug.* 15	*Aug.* 16

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.87; commercial bills, 4.81½@4.83; francs, 5.20 less 1-32@5.16⅞; reichsmarks, 94¼@95.

Accompanying the above advance in the Bank of England's discount rate, its statement for the week showed a gain of £792,413, and the proportion of reserve against liability was given as 50.62 per cent., against 46.90 the week before. There was also a decrease of £932,000 in the loans. In the London open market call money is quoted at 2½@2¾ per cent., while discount is firmer at 4 7-16@4½ per cent. At Berlin the bank rate is 5½ per cent: and the market 4⅞ per cent. The discount rate of the Bank of France remains at 3½ per cent.

New York Securities Market.

Nervous anxiety concerning the effect of measures directed against railroads and corporations by the national and state authorities continued to be the ruling influence in this week's stock market, and resulted in additional liquidation and bear selling. The declines which lasted with little interruption from last Saturday until Thursday were the most severe which have yet occurred in the course of the present downward movement, prices for the larger portion of the active share list falling below those recorded in the panicky market of last March. In fact, momentary fears that disaster might result from the enormous shrinkage, and the accompanying weakening of both loans and margined accounts, were very prevalent. Nothing of this kind developed in banking or Stock Exchange circles, though it is generally admitted that the losses on the part of holders of stocks have been as severe as anything which has been seen in recent years. It was also noted that investment buying, which would normally make its appearance when sound stocks could be bought at such attractive prices, has been practically absent, or at the best was of a very restricted and scattered character; also that the support from large interests was lacking entirely during the early part of the week, the rally which occurred on Tuesday being apparently due to covering of shorts on reports that the attitude of the administration toward corporations would be modified, and that announcements to that effect might be expected. The declines, in fact, did not meet with a substantial check until Thursday, when statements of a very positive character made their appearance that the President contemplated making reference in a coming address to the commotion in financial circles, and will take occasion to define his position in a way calculated to allay distrust reported among investors. Intimations came from responsible quarters that leading financiers recognize the futility of offering opposition to the government's policy, and that steps will be immediately taken to undo or modify various combinations which have been the object of criticism and attack, the stories on this head relating mostly to one particular group of properties. At the same time better buying made its appearance, and the market had a very substantial rally, recovering in some instances a large part of the preceding declines. On Friday the market continued to advance, but at the close there was further selling and corresponding recessions.

One source of price weakness was the receivership announced of the Pope Manufacturing Company, although that corporation was in a stock market sense unimportant. The extreme firmness of time money has been another factor. While call money is plentiful and renewals have been made at 3 per cent., 7 per cent. is demanded for time loans running six months, and it is furthermore noted that the local banks are extremely loath to put out funds in that way at present, notwithstanding reassuring declarations as to Secretary Cortelyou's intention to increase Treasury deposits in the national banks whenever such a course is necessary in order to facilitate the crop movement. This was to some extent offset by the raising of the Bank of England's rate on Thursday from 4 to 4½ per cent., which action, it was openly stated, was taken for the purpose of preventing New York from drawing funds from London.

Boston Stock Market.

Wool Markets.

There has been a great deal of quiet activity in the market during the week, and much more wool has been sold than is reported, this wool being sold to arrive and will not be reported until the wools are opened and the sale approved. The tendency is still upward, and asking prices are much easier to get than previously. Arrivals are heavy, but there is no accumulation, much of the wool going direct to manufacturers, to whom it was sold to arrive. The principal part of the demand has been for the finer grades of worsted and woolen wools, but there has also been a better inquiry for low wools, such as quarter bloods. The situation appears to be gradually broadening, and in the absence of stocks manufacturers are looking around for almost any grade which will fill their needs, and are showing a very keen interest. The money situation and the telegraphers' strike are affecting the market very little, except that they have a tendency toward restraining too heavy buying, and tend to cause dealers to accept fair bids in order to turn over their wools. Foreign markets are very strong, but quiet. Among the sales of the week were staple Oregon at 23@24 cents, clothing Oregon at 20@21 cents, No. 2 Eastern Oregon at 24@25 cents, 400,000 pounds of twelve months Texas at 27 cents, eight months Texas at 23@24 cents, Ohio half blood fleeces at 34 cents, three-eighths blood at 32 cents, Michigan half blood at 33@33½ cents, three-eighths blood at 32½ cents, fine unwashed delaine at 27@28 cents, Ohio washed at 38@38½ cents, unwashed at 31 cents, Michigan unwashed at 29 cents, Ohio XX at 34 cents for a small lot, fine unwashed clothing at 27 cents for Ohio, and 25 cents for Michigan, lambs B pulled at 43@45 cents, half blood territory at 26@28 cents, quarter blood at 26@27 cents, fine and fine medium at 20@25 cents, clothing Nevada, Utah and Idaho at 20@23 cents, quarter blood fleeces at 29@31 cents, Montana at 26@27 cents, Australian 40s to 60s at 40@42 cents, and 58s in a small way at 45@46 cents.

Boston Shoe and Leather Market.

The leather market is reporting some good sales of side leather, calfskins and patent side leathers. Prices are held firmly and recessions are not obtainable upon goods that are of standard quality. Buyers are showing more interest in the hide market, but are looking only for short-haired and recent take-offs. The tendency of shoe buyers is strongly toward the better grades of footwear to meet a constantly increasing trade. Makers of the cheapest shoes are not in receipt of a full volume of orders for the season, but makers of the better grades are busy. Shipments are showing up fairly well for the season, those of the past week exceeding the corresponding week of last year. The *Shoe and Leather Reporter's* figures are as follows: Last week, 103,246 cases; preceding week, 91,820; last year, 101,699; total for 1907, 3,025,528; total for 1906, 3,160,328; decrease, 134,800.

LABOR'S SHARE IN PRODUCTIVE INDUSTRY.

The *Engineering News* says: "The United States Census Bureau has recently issued a volume entitled 'Wealth, Debt and Taxation.' It gives what is doubtless the most accurate and careful estimate ever made of the total wealth of the United States. The estimate is made for the year 1900 and the year 1904. In the former year the total value of all property in the United States is set at $88,500,000,000. In the latter year the total was $107,000,000,000.

"These figures by themselves mean nothing. They are too huge for comprehension. But if it were possible to draw from them an approximate estimate of the total income which capital, or accumulated wealth, receives, and if we could then compare this income with the total earnings of labor, the comparison might contain some useful lessons.

"Let us take first the task of estimating the total income which capital receives. The census report before us classes the total wealth of the United States as follows:

Real property and improvements	$62,341,000,000
Live stock	4,074,000,000
Farm implements and machinery	845,000,000
Manufacturing machinery, tools and implements	3,300,000,000
Gold and silver coin and bullion	2,000,000,000
Railroads and their equipment	11,245,000,000
Street railways, shipping, waterworks, electric light and power systems, telegraph and telephone systems and canals	4,841,000,000
All other property—products of agriculture, manufactures and mines, merchandise, clothing, furniture, carriages and miscellaneous personal property	18,462,000,000

"In our task of ascertaining the income on the invested weath of the United States we must recognize first that not all the wealth in the above table yields any income. Of course all the personal belongings included in the last item—furniture, clothing, provisions, etc.—are not invested and yield no income to their owners. These things are the product of combined labor and capital.

"It is doubtful whether real estate, which is seen above to constitute the bulk of the property of the United States, would show anything like as large an average return as the railways; but as we are aiming to find the maximum possible drain that capital may be making on the country, we will assume that railway capital represents a fair average of the rate of income produced by all wealth. On this basis $80,812,000,000 of invested capital at 4½ per cent. would yield an annual return of $3,534,000,000.

"And now let us turn and study the side of labor. The population of the United States on June 1, 1904, is placed by the census at 81,256,000. It was 76,000,000 in round numbers in 1900. The number of wage earners, or 'persons engaged in gainful occupations,' was given by the census of 1900 as 29,286,000. At the present time, therefore, this number must be swelled to some 31,000,000. We believe, however, that this is in excess of the true number of wage workers, as it includes those who are past the age of active work and those who are incapacitated for other reasons. A more accurate method, we believe, is to estimate one worker to each three and a half persons, which would give a total of 23,200,000 wage earners in round numbers.

"What are the average annual earnings of these workers? For a guide in answering this question we turn again to the Interstate Commerce Commission railway statistics, and find there that in 1905 there were 1,382,000 men employed on the railways of the United States who received wages and salaries amounting to $840,000,000, or an average of $608 per employee. Again, the census report on manufactures, just issued, shows that in 1905 there were in round numbers 6,000,000 persons engaged in manufacturing industries who received wages and salaries amounting to $3,186,000,000, or an average of $531 each. Similar statistics are not available for other occupations, but it will probably be generally agreed that the 1,500,000 persons engaged in professional occupations receive a higher average than this, while the 10,500,000 persons engaged in agriculture and the 5,500,000 in domestic and personal service receive considerably less. All things considered, $450 per annum seems as low a figure as can reasonably be estimated as the earnings of the average worker.

"Multiplying now the total number of wage earners found by these average earnings, we have the total compensation paid to labor in a year at $10,340,000,000.

"If these figures be accepted, then it appears that capital is now receiving about one dollar where labor is receiving three; or to put it another way, if the annual product of the country is divided into four equal heaps, capital is getting one of these heaps and labor the other three.

"But in making this comparison between the earnings of capital and the earnings of labor we must be careful not to make the common mistake of identifying capital with wealth and labor with poverty. A large part of the $107,000,000,000 of wealth in the United States is actually the property of the wage workers themselves. The huge accumulations of wealth by the few multi-millionaires bulk large in the popular mind, but they are really small compared with the accumulated savings of the million of people of moderate means. The deposits in the savings banks of the United States last year exceeded $3,482,000,000. That this is the property of people of small means is well known to everyone, and is practically proved by the fact that the average size of each deposit is only $433.79. The assets of life-insurance companies, totaling over $2,700,000,000, are likewise chiefly made up of the savings of those of small means. The farms of the United States are valued at $16,615,000,000, and 5,690,000 families live upon them, giving an average per family of $2,920.

"Wealth that is so widely distributed certainly contains no threat against the public welfare and gives no foundation for the arguments of the Socialist. He must confine his agitation against property to the holdings of the wealthy if he would command a hearing. The preceding discussion shows that the total holdings of those that may be classed as wealthy must be only a part, and probably a small part, of the existing $80,812,000,000 of income-producing wealth."

AUTOMOBILES IN THE FOREIGN TRADE.

Automobiles valued at more than 10 million dollars passed through the ports of the United States in its foreign trade in the fiscal year just ended. Five and a half million dollars' worth of these were exports and 4½ million dollars' worth imports. In addition to the 5½ million dollars' worth of automobiles exported to foreign countries, about $100,000 worth went Porto Rico, $160,000 to Hawaii, and about $5,000 worth to the Philippines.

The foreign trade in automobiles shows a rapid growth, especially on the export side. The value of exports of automobiles and parts thereof was, in 1902, a little less than 1 million dollars; in 1903, 1¼ millions; in 1904, 1¾ millions; in 1905, 2½ millions; in 1906, 3½ millions, and in 1907, 5½ millions of dollars. On the import side the value of automobiles brought into the United States has only within the last two years been sufficient to justify the Bureau of Statistics of the Department of Commerce and Labor in stating their imports separately, the value of automobiles imported in the fiscal year 1906 being $3,844,000, and of parts thereof $400,000; while in 1907 the value of these vehicles imported was $4,041,000, and of parts thereof $801,000. Thus the growth in exports of automobiles is much more rapid than that in imports, and the value of automobiles exported seems likely in the near future to exceed by far the value of those imported.

France, Italy, the United Kingdom and Germany supplied the 4 million dollars' worth of automobiles imported during the year, nearly 3 million dollars' worth of this being from France, a little less than a half million dollars' worth from Italy, and the remainder about equally divided between the United Kingdom and Germany. Of the 5½ million dollars' worth of automobiles exported during the past year, 1½ million dollars' worth went to the United Kingdom, a little over 1 million dollars' worth to Canada, a little less than 1 million dollars' worth to Mexico, a half million dollars' worth to France, and a quarter of a million dollars' worth to Italy. Thus about 2½ million dollars' worth of the automobiles exported in 1907 went to Europe, a little over 1 million dollars' worth to British North America, 1¼ million dollars' worth to the countries south of the United States, including Mexico, South America and the West Indies, and about $350,000 worth to Asia and Oceania.

To nearly all countries the exports of automobiles during the year 1907 show a marked increase over those of 1906. To the United Kingdom the exports in the fiscal year 1906 were but $948,995, and in 1907, $1,530,204; to France, in 1906, $282,317, and in 1907, $512,524; to Canada, in 1906, $648,438, and in 1907, $1,175,334; to Mexico, in 1906, $422,626, and in 1907, $812,639; to the West Indies, in 1906, $241,353, and in 1907, $207,390, and to British Australasia, in 1906, $160,944, and in 1907, $207,715.

The growth in exports of horseless vehicles to the tropical sections of the world has been strongly marked. While the value of shipments of this class of merchandise to the United Kingdom only grew from $671,553 in 1902 to $1,520,304 in 1907, similar exports to Mexico grew from $27,710 in 1902 to $812,639 in 1907; those to the West Indies, from $11,152 in 1902 to $207,390 in 1907; those to South America, from $15,353 in 1902 to $204,211 in 1907; and those to British Australasia, from $9,581 in 1902 to $207,715 in 1907. Exports of vehicles of this class to the tropical sections of the world were in 1907 more than ten times as much as in 1902, while those to other sections of the world were in 1907 but about five times as much as in 1902. About one-fourth of the automobiles exported from the United States are sent to the horseless areas of the world, including in this term China, Japan, and the Tropics; while from the United Kingdom nearly one-half of the 2½ million dollars' worth of automobiles exported in 1906 were sent to the Tropics or the Orient.

The United States occupies second rank among the commercial nations as an exporter of automobiles, being exceeded only by France. Figures compiled by the Bureau of Statistics present the latest available data for France, Germany, the United Kingdom and Italy. In 1905, the latest year for which figures are available, the total export of horseless vehicles from France was valued at $19,400,564, representing shipments to more than a score of countries.

From the United Kingdom the exportations of automobiles in 1906, the latest available year, were valued at $2,410,859, most of the machines being marketed in British colonies or possessions.

The value of automobiles entering international commerce is about thirty-five million dollars a year.

CROP CONDITIONS ON AUGUST 1.

The crop reporting board of the Bureau of Statistics of the Department of Agriculture finds, from the reports of the correspondents and agents of the bureau, as follows: The condition of corn on August 1 was 82.8, as compared with 80.2 last month, 88 on August 1, 1906, 89 on August 1, 1905, and a ten-year average of 83.2. The following table shows, for each of the states having one million acres or upward in corn, the condition on August 1 in each of the last three years, and that on July 1, 1907, with the ten-year August averages:

	Aug. 1, 1907	*July* 1, 1907	*Aug.* 1, 1906	*Aug.* 1, 1905	10-*yr av'ge*
Illinois	85	82	82	95	84
Iowa	78	78	95	89	85

Michigan	80	76	87	81	83
Wisconsin	78	77	89	86	86
Pennsylvania	77	73	95	94	89
United States	82.8	80.2	88.0	89.0	83.2

Preliminary returns indicate a winter-wheat crop of about 409,500,000 bushels, or an average of 14.6 bushels per acre, as compared with 16.7 bushels per acre last year, as finally estimated. This preliminary estimate of the yield of winter wheat and the estimated acreage on which it is based are subject to such revision and correction when the final estimates of the bureau are made next December, as may be found proper through investigations now in progress.

The following table shows the estimated average yield per acre (bushels) in each of the eleven principal winter-wheat states in 1907 and 1906, the figures for 1906 being the final estimates issued December 20:

	1907	1906		1907	1906
Kansas	11.3	15.3	California	15.0	17.1
Indiana	14.4	20.7	Oklahoma	9.0	14.0
Missouri	13.2	14.8	Texas	7.4	11.5
Ohio	16.3	20.4	Michigan	14.5	13.1
Nebraska	19.0	23.2			
Illinois	18.0	19.5	United States	14.6	16.7
Pennsylvania	18.6	17.7			

The average quality of winter wheat is 90.5. The average condition of spring wheat on August 1 was 79.4, as compared with 87.2 last month, 86.9 on August 1, 1906, 89.2 on August 1, 1905, and a ten-year average of 83.4. The following table shows, for each of the five principal spring-wheat states, the condition on August 1 in each of the last three years, and that on July 1, 1907, with the ten-year August averages:

	Aug. 1, 1907	*July* 1, 1907	*Aug.* 1, 1906	*Aug.* 1, 1905	10-*yr av'ge*
Minnesota	80	85	85	86	85
North Dakota	72	88	88	91	82
South Dakota	83	89	90	91	82
Iowa	85	89	92	88	84
Washington	98	95	75	95	89
United States	79.4	87.2	86.9	89.2	83.4

The average condition of the oat crop on August 1 was 75.6, as compared with 81 last month, 82.8 on August 1, 1906, 90.8 on August 1, 1905, and a ten-year August average of 84.9. The following table shows, for each of the thirteen principal oat states, the condition on August 1 in each of the last three years, and that on July 1, 1907, with the ten-year August averages:

	Aug. 1, 1907	*July* 1, 1907	*Aug.* 1, 1906	*Aug.* 1, 1905	10-*yr av'ge*
Iowa	80	88	86	94	86
Illinois	76	80	71	88	82
Wisconsin	73	90	93	94	90
Nebraska	80	86	78	87	83
Minnesota	81	88	90	96	89
Indiana	70	74	67	95	87
Ohio	74	79	77	91	89
Michigan	72	75	89	92	91
South Dakota	88	91	96	98	88
North Dakota	75	89	93	95	83
New York	83	86	89	96	91
Pennsylvania	86	86	85	94	88
Kansas	39	40	60	78	71
United States	75.6	81.0	82.8	90.8	84.9

The proportion of the oat crop of last year still in the hands of farmers is estimated at 7.1 per cent., equivalent to 68,000,000 bushels, as compared with 7.1 per cent. of the crop of 1905 in farmers' hands one year ago, 6.2 per cent. of the crop of 1904 in farmers' hands two years ago, and a ten-year average of 6.6 per cent.

The average condition of barley on August 1 was 84.5, against 84.4 one month ago, 90.3 on August 1, 1906, 89.5 on August 1, 1905, and a ten-year average of 86.

The average condition of rye at time of harvest was 88.9, as compared with 89.7 one month ago, 90.8 on August 1, 1906, 92.6 on August 1, 1905, and a ten-year average of 88.5.

The acreage of buckwheat is about 778,000, which is 11,500 acres, or 1.5 per cent., less than last year. The average condition of buckwheat on August 1 was 91.9, as compared with 93.2 on August 1, 1906, 92.6 on August 1, 1905, and a ten-year average of 91.8.

The average condition of tobacco on August 1 was 82.8, as compared with 81.3 one month ago, 87.2 on August 1, 1906, 84.1 on August 1, 1905, and a five-year average of 83.4.

The average condition of potatoes on August 1 was 88.5, as compared with 90.2 one month ago, 89 on August 1, 1906, 87.2 on August 1, 1905, and a ten-year average of 85.8.

Preliminary returns indicate the acreage of hay to be about 42,551,000 acres, or .2 per cent. more than last year.

The average condition of other crops on August 1, with comparisons, are found to be approximately as follows:

Pastures—Improved from a condition of 88.9 on July 1 to 91.7 on August 1, which compares with 87.7 on August 1, 1906. The improvement was general.

Timothy—A marked improvement in condition was made in July, as shown by the increase from 82, reported on July 1, to about 89 on August 1, which compares with 82 on August 1, 1906. The important surplus states of Ohio, Indiana, Illinois, Iowa and Missouri together gave a condition of 87 on August 1, as compared with 68 on August 1, 1906.

Alfalfa—Improved from 88 on July 1 to 92 on August 1, which compares with 91 reported a year ago.

Clover—Reports indicate a production of about 75 per cent. of a full crop, compared with 71 per cent. reported a year ago.

Millet—Condition on August 1 was about the same as on July 1, being 88, compared with 85 on August 1, 1906.

Flax—Improved from a condition of 91.2 on July 1 to 91.8 on August 1, which compares with 92.2 a year ago. Condition of the principal states, in the order of their importance, are North Dakota, 92; Minnesota, 91; South Dakota, 94.

Rice—Condition on August 1 was 88.6, compared with 88.7 on July 1, and 83.1 on August 1, 1906.

Sweet Potatoes—About the same as on July 1, being 86, compared with 91 a year ago.

Watermelons—Improved in condition during July, indicating about 78 on August 1, compared with 75 on July 1, and about 81 on August 1, 1906.

Sorghum—The condition declined from 85 on July 1 to about 83 on August 1, which compares with 89 a year ago.

Sugar Cane—Condition approximately 92 on August 1, compared with 93 on July 1 and 87 a year ago. The condition in Louisiana on August 1 was estimated as about 95.

Sugar Beets—Improved slightly during July. Condition on August 1 was about 92, compared with 91 on July 1, and 96 on August 1, 1906. Important states showed the following condition on August 1, 1907: Michigan, 89; Wisconsin, 92; Colorado, 94; Utah, 98; California, 85.

Hops—Condition on August 1 was about 89, or nearly the same as on July 1; this compares with a condition of about 97 a year ago. Condition on August 1 in important states follows: Oregon, 91; California, 90; New York, 85.

Hemp—Condition August 1 was about 88, compared with 89 on July 1, and 90 on August 1, 1906.

Broom Corn—Condition August 1 was about 86, compared with 85 on July 1, and 89 on August 1, 1906.

Onions—Improved in July in nearly all the important producing states and represented a condition on August 1 of about 92, compared with 90 on July 1, and 90 on August 1, 1906. Important states show as follows: New York, 88; Ohio and Illinois, 92; Indiana, 91; Michigan, 84; Texas, 82.

Beans (not lima)—Condition on August 1 was about 89 per cent., compared with 87 on July 1, and 90 on August 1, 1906. New York represented a condition of 89 on August 1, and Michigan, 92. A year ago both states represented a condition of 90.

Tomatoes—Improved in July from 82 on July 1 to about 86 on August 1, which compares with 87 a year ago. Important states show as follows: Maryland and Delaware, 85; New Jersey, 82; Ohio and Missouri, 88; Indiana, 87.

Apples—Condition declined during July from 44, indicated on July 1, to 39 on August 1, which compares with 68, reported on August 1, 1906. Condition in important producing states follows: New York, 65; Pennsylvania, 44; Ohio and Illinois, 30; Michigan, 55; Missouri, 10; Kansas, 2.

Peaches—Indicated 33 per cent. of a full crop on August 1, compared with 36 on July 1, and 66 on August 1, 1906. Georgia reported 22 on August 1; Texas, 50; Ohio, 25; Michigan, 35; Missouri, 10; Kansas, 3; Oklahoma, 70; California, 63.

Grapes—Condition on August 1 was about 84, same as a month ago, and compares with 86 a year ago. New York reported 83 on August 1; Ohio, 85, and California, 94. A year ago California reported a condition of 89; Ohio, 79, and New York, 83. Conditions are low compared with a year ago in Kansas, Missouri and Oklahoma.

In the United States about 84 per cent. of the total number of concerns failing had $5,000 capital or less and 13 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES, SINGLE INSERTIONS, DISPLAYED 25 CENTS A LINE, AGATE MEASURE.

DIVIDENDS.

UNION PACIFIC RAILROAD CO.

A Semi-Annual Dividend of $2.00 per share on the Preferred Stock and a Quarterly Dividend of $2.50 per share on the Common Stock

of this company have been declared payable at the Treasurer's Office, 120 Broadway, New York, N. Y., on October 1, 1907, to stockholders of record at 12 o'clock noon, on Saturday, September 14, 1907.

The stock transfer books will be closed at 12 o'clock noon on September 14, 1907, and will be reopened at 10 A. M. on October 9, 1907.

Stockholders who have not already done so are requested to promptly file mailing orders for dividends with the undersigned, from whom blank orders can be had on application.

FREDERIC V. S. CROSBY, Treasurer.

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

Use Carter's Ink.

Remington Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 24, 1907.

It is announced that the financial authorities of New York have decided that the municipal bond issues of that city shall for the present bear the rate of 4½ per cent., with the exception of the short-term revenue bonds sold in order to anticipate the receipt of taxes. Such a decision is by no means strange. It has already been pointed out that New York, Boston and other cities, of which the credit is under ordinary circumstances of the highest, have failed to secure public bids from bankers and investors generally for 4 per cent. bond issues. Nor has the attempt in the case of New York to dispose of its 4 per cent. bonds at private sale, or, in other words, to sell them over the counter, been a success. Applications for them at par have been limited, and the policy adopted by the city finance department of paying in part claims of contractors and others in the bonds simply resulted in the recipients going into the market and selling the securities at whatever they would bring. Under these circumstances the new 4s of New York City sold at as low as 96@97 this week, and, as was also natural, showed a further decline to 95½, when the decision to raise the interest rate on new issues to 4½ per cent. was made public.

It is a lofty purpose that is set forth in the opening article of the American proposition for the establishment of a permanent court of arbitration at The Hague. That article records the desire of the signatory powers to organize an international high court of justice, easily accessible and free of charge, with judges representing the various systems of law of the world and capable of insuring a continuation of arbitration by jurisprudence. As now completed in agreement with Germany and Great Britain, the document provides that the judges must be jurisconsults of known competence in international law, selected as far as possible from the members of the permanent court of arbitration, and appointed for terms of twelve years, with diplomatic privileges and immunities while engaged in the exercise of their functions. The court is to consist of seventeen members, of whom nine shall constitute a quorum. It is not without significance that while the establishment of this great court is actively furthered by such nations as the United States, Great Britain and Germany, leaders in the world's civilization, President Nelidoff, the leader of the Russian delegation, has been informally interviewing the chairmen of the committees on the advisability of postponing the discussion of the project until the next peace conference, with the suggestion that the powers study the question in the meantime.

High foreign exchange rates, together with the renewed gold exportations, have of course affected the action of the money market. Moreover, domestic exchanges are moving against New York, the indications in this respect being clearly that the interior is calling on the eastern financial centers, with the further prospect that this process will become more pronounced in the near future. In consequence there has been a further hardening of time money rates at New York within the past week, quotations of as high as 7½ per cent. for five months' loans on collateral having been recorded. On the other hand, the rates for call money have been exceedingly easy at 2 per cent. or thereabouts. This discrepancy in the interest quotations between call and time money is, however, the outcome of the preparations by the banks and other institutions to prepare for the outflow of funds to the interior, although the general expectation is that the Secretary of the Treasury, in accordance with his announced intentions, will increase the government deposits in national banks in time to avert any serious monetary disturbance.

Gold exports were resumed this week, a New York banking firm having dispatched $1,100,000 to Germany. This makes the total amount of specie shipped since the outflow began on May 27 no less than $30,650,000, of which Paris took $25,300,000, London $2,750,000, Amsterdam $1,500,000, and Germany the sum involved in the current operations. The strength of foreign exchange is very marked, demand sterling having risen to 4.87.85; but even at such figures the present exports of gold are hardly explained by ordinary rules, as rates for cheques on London at both Paris and Berlin have had very sharp advances, the quotation at the former center being 25 francs 23½ centimes, while at the German capital the rate for sterling is 20 marks 54 pfennigs, being, in fact, practically at the level which would justify shipments of gold from Berlin to London. It is therefore presumable that the transfers just made from New York to Berlin are, as the shippers are quoted as saying, in the nature of special arrangements depending upon monetary conditions in Germany. That country, it appears, has been paying off some large indebtedness to Austrian bankers, who called in the money placed in the Berlin market, the effect of which would be to create a decided demand for additional gold reserves by the Bank of Germany, and thus justify the payment of a substantial premium for the amount obtained from New York.

Secretary Taft, who is now a presidential possibility, and who is shortly to leave the country for an extended trip which will carry him through the principal points of interest in the Far East as well as in northern Europe, has left behind a clear statement of his position in relation to a number of public questions in a speech delivered at Columbus, Ohio, this week. His attitude in relation to the course of the present administration is well known, and was emphasized in a portion of his address in which he expressed, with a few minor exceptions as to method, his thorough sympathy with the policies of President Roosevelt. One of the points of chief interest in his speech was that in which he touched upon the question of tariff revision. While holding that the present business of the country rests on the protective tariff, he declared it to be the duty of his party to see to it that the tariff on imported articles does not exceed substantially the reasonably permanent differential between the cost of production in foreign countries and that in the United States, and added that it seemed to him that even most of the extremists in the matter of the tariff were of opinion that it would not only be unwise but unsafe for the party to fail in its next national platform to pledge itself to a revision of the tariff as soon as possible after the next presidential election.

The important announcement comes by way of London that Great Britain has accepted the proposition of the United States to submit the Newfoundland fisheries question to arbitration at The Hague, and that while the matter is in process of arbitration the fisheries will be conducted under the same modus vivendi as last year. It is now learned that the long correspondence had made it evident that the contentions on both sides could not be reconciled, and, in fact, that something in the nature of a deadlock had been reached. When that situation became apparent the United States ambassador to Great Britain proposed the submission of the question to arbitration, and after some consideration the proposal was accepted. It is even said that the British government has secured the assent of Sir Robert Bond to the arrangement, though he was reluctant to accept the modus vivendi on the lines of that in force last year. As is usual in such cases, the diplomatic departments of the two governments maintain reserve and are uncommunicative, so that it will require some time to acquire exact information as to the precise points which will be submitted to the arbitrament of The Hague tribunal. It will not be denied, however, that in view of the standing of the nations concerned in the fisheries dispute, the agreement to submit the questions involved is one of the most important that has yet been reached, and that the disposition made of the matter cannot fail to enhance the consideration accorded to The Hague tribunal as well as the vogue of the principle of arbitration itself.

Future stock and bond issues of corporations coming under their jurisdiction will be closely scrutinized by the New York Public Service Commission. A rule just adopted by the commission for the first district requires that applications for permission to issue stocks or bonds or other evidences of indebtedness must be made by petition, and that the petition must contain, in addition to statements as to the amount and kind of stock which the corporation desires to issue, and of the use to which the capital to be secured by the issue is to be put, a sworn statement in detail of the financial condition of the company. This latter statement must show the amount and kinds of the capital stock outstanding, and the rate and amount of dividends declared thereon during the last five years, the outstanding indebtedness, whether and how secured, and if secured by mortgage or pledge, a copy of the instrument must be annexed to the petition. The statement must also embody a description of the road and in general terms its equipment, with figures as to the cost of its existing property, and a statement of the amount of any of its stock held by other corporations and their names and the amount held by each. Action upon applications of this kind is not likely to be of a perfunctory character, as is indicated by the denial on Thursday of an application made to the commission of the second district for permission to increase the stock of a light and power company, on the ground that it would create an improper fixed annual charge upon the property.

PRESIDENT ROOSEVELT'S PROVINCETOWN ADDRESS.

Even a mild critic, we imagine, would be inclined to say that in his more recent addresses on commemorative occasions President Roosevelt has strayed from the ideal of such deliverances. He has the ability to speak forcibly and even strikingly, and enough of the sympathetic quality to render his discourses pertinent to the time and to the theme. It has, however, been a notable feature of his speeches for some time past that, while not ignoring the special occasion commemorated, he has dealt with it in a somewhat incidental fashion, reserving very largely his more significant remarks and his energy of expression for comment on existing conditions, and the exposition of his purposes in relation to such conditions. He has followed this custom in his address at Provincetown. He touches, indeed, with no little sympathy upon the salient features of the Puritan character, but he reserves the bulk of his address for a discussion of the attitude of the government toward the matter of corporate regulation. The transition from the one topic to the other is accomplished in the sentence—not an uncharacteristic one—"The spirit of the Puritan was a spirit which never shrunk from regulation of conduct if such regulation was necessary for the public weal; and this is the spirit which we must show to-day whenever it is necessary."

In dealing with the subject seemingly uppermost in the President's mind he covers ground which repeated exposition has rendered somewhat familiar. He starts with the statement that experience has shown that it is necessary to exercise a far more efficient control than at present over the business use of those vast fortunes, chiefly corporate, which are used (as under modern conditions they almost invariably are) in interstate business, and there is a growing determination that no man shall amass a great fortune by special privilege, by chicanery and wrongdoing, so far as it is in the power of legislation to prevent, and that the fortune when amassed shall not have a business use that is anti-social. Most large corporations, the President continues, do a business that is not confined to any one state, and the effort to control these corporations by mere state action cannot produce wholesome results. He believes in a national incorporation law for corporations engaged in interstate business, and, furthermore, that the need for action is most pressing as regards those corporations which, because they are common carriers, exercise a quasi-public function, and which can be completely controlled in all respects by the federal government by the exercise of the power conferred under the interstate commerce clause, and, if necessary, under the post-road clause of the constitution. During the last few years, he adds, "we have taken marked strides in advance along the line of proper regulation of these railroad corporations, but we must not stop in the work." In his view the national government should exercise over such coporations a supervision and control similar to that which it exercises over national banks.

Referring to the necessarily experimental character of the government's treatment of the problem of regulation, Mr. Roosevelt says that the anti-trust law has filled a useful place in bridging over a transition period until the American people shall definitely make up its mind that it will exercise over the great corporations "that thoroughgoing and radical control which it is certain ultimately to find necessary." The principle of this law, so far as it prohibits combinations, which, whether because of their extent or of their character, are harmful to the public, must, he insists, always be preserved. Ultimately, and, he trusts, with reasonable speed, the national government must pass laws which, while increasing the supervisory power of the government, will also permit such useful combinations as are made with absolute openness and as the representatives of the government may previously approve, but it will not be possible to permit such combinations save as the second stage in a course of proceedings of which the first stage must be the exercise of a far more complete control by the national government.

Glancing at the recent situation in the stock market, which has been brought to his attention in a number of ways, Mr. Roosevelt says that he thinks most of the disturbance has been due to matters not particularly confined to the United States and to matters wholly unconnected with any government action, but, he adds, it may well be that the determination of the government, in which it will not waver, "to punish certain malefactors of great wealth has been responsible for something of the troubles, at least to the extent of having caused these men to combine to bring about as much financial stress as they possibly can, in order to discredit the policy of the government and thereby to secure a reversal of that policy so that they may enjoy the fruits of their own evil-doing." There will be, he declares, no reversal of the policy he has steadily pursued, no let-up in the effort to secure the honest observance of the law, for, he adds: "I regard this contest as one to determine who shall rule this government—the people through their governmental agents, or a few ruthless and determined men, whose wealth makes them particularly formidable, because they hide behind the breastworks of corporate organization."

After a careful reading of this address of the President we cannot escape the conclusion that no small number of his friends will regret its delivery at the time and in the place it was given to the world. His remarks upon the subject apparently closest to his thought, that of the relations of the government to corporations and corporate misdoing, were not necessary to the occasion. In making them he fell unconsciously into the tone as into the attitude of the protagonist in a great present contest—an attitude somewhat disturbing to equilibrium and perspective, and a tone to be rarely and reluctantly adopted by one standing as the chief of the state. It is without doubt a proper function of the Chief Executive to suggest measures or lines of legislation, but suggestions of that nature are probably most maturely considered and most temperately framed when made under the sense of responsibility present to one framing a state paper, such as a message, to those charged with the duty of considering legislative needs. Finally, the time is not the most fit for discussions of the tenor indulged in by the President, for the present situation is one calling for clearness of sight and sobriety of temper, and one in which the temptation to expression which may have a disturbing effect may well be resisted by one acting in a high representative capacity.

THE COTTON GOODS SITUATION.

On the eve of a new cotton crop year the position of cotton manufactures is at once interesting, peculiar and perplexing, perhaps more so than in any previous year on record. Prices of all kinds and grades of cotton goods are abnormally high, on an even higher level than during the great speculative booms in the price of the raw material, or than at any time since the civil war, when there was an actual famine in cotton. The mills are enjoying a period of prosperity greater than ever before experienced. In spite of higher wages paid to their operatives and the extreme cost of cotton, they are paying large dividends, have substantial surpluses, and their stock is selling at top prices. All the mills have sold their product so far into the future, in order to satisfy the insistent demand, that they have been placed in an extremely independent position in regard to both price and delivery, and cotton goods on spot are almost impossible to obtain at any price, however high.

The feeling of unrest and uncertainty in financial circles, the condition of the money market, and minor labor troubles have, however, made for a somewhat indefinite, but nevertheless increasing, undercurrent of conservatism among cotton goods manufacturers, wholesalers and jobbers generally, and while this feeling has had as yet very little effect upon the immediate market, and though it may be lessened greatly should the financial situation clear, still this disinclination to purchase more goods than are actually needed and can be turned over quickly adds to the complexity of business affairs in general.

In several lines it is becoming apparent, and is openly stated in some quarters, that the big jobbers have not kept pace with the mills in advancing their prices recently, but have given the retailers the advantage gained by large purchases made at various periods during the series of advances, and that this policy has already been carried to the danger point. The mills are so far behind on their deliveries, with no relief in sight, and the jobbers are, in turn, so far delayed in getting out their goods, that the latter are expressing some anxiety as to their ability to get the high price which would be made necessary should the mills add another substantial amount to their price. So many lines of goods are now "at value," that is, at the price current on the day of delivery, that while no break in price is feared, credit lines may be drawn more tightly.

That higher prices must sooner or later be made seems certain, but just at present the mills are satisfied with their margin of profit and are not inclined to press sales, but are disposed to wait until they can ascertain just what price they will be obliged to pay for their raw cotton. Present indications are that the season's cotton crop will be of short staple to a greater extent than for several years past, and on this expectation prices for good spinning cotton are being maintained on a very high level, based on a cost of 13.25 cents for middling uplands in New York.

The unsettled basis of the cotton market and the sold-up condition of the mills have brought about a very unusual feature, and that is that some manufacturers are refusing more orders for goods, on the ground that they are already sold ahead beyond their expectation of making reasonable delivery and do not care to accept a greater proportion of the risks attendant upon the uncertainty of the future course of the market.

The adoption of a standard cut of forty-seven and a half yards in the mills at Fall River was the first definite step toward standardizing cotton weavers' wages in this country, and is viewed with satisfaction in all quarters, as most encouraging to the textile industry and as preventing a serious strike. While this was a compromise, the weavers abandoning a demand for a cut of forty-six yards, the mill owners, in dropping the idea of making the speed of the looms a factor, considering the radical increases in wages previously made, have in many instances practically reduced the per capita production of their factories. This further increases the difficulty of catching up on deliveries, and furnishes another reason for the hesitation in regard to the booking of orders for even distant delivery.

Bleached cottons are a very strong feature of the market, and further advances in prices have been predicted and then postponed several times during the past fortnight, but it is thought that it will be in this department that the next advance will be made. Stocks are very small, the mills are sold far ahead, and deliveries are hard to get on old orders; still the dealers are beginning to show a disposition to hold back at the high prices already in effect. Since August 1 prices have been advanced ¼ to ½ cent per yard.

The print-cloth market is very strong, with standards at 5¼ cents, this price being largely nominal, as desired deliveries are not obtainable, except in very small lots, from second hands. Cloths are now being sold for delivery up to January 1, with some sales beyond the first of the year, the mills being fairly well sold up for the balance of this year. The eastern mills are already declining to book orders beyond January 1, asserting that they have business enough on hand to keep them running full until then.

The situation in staple prints is extremely strong, and has been further complicated by the shutting down of some of the leading printers on account of the scarcity of print cloths. All discounts have been withdrawn, and another advance is expected soon. None of the printers are soliciting business, they being so far sold ahead, and with deliveries delayed.

The gingham mills have not yet been able to make deliveries on all the goods purchased on the last rush of the jobbers, so that they have been holding off from further business, apparently waiting for some large mills to make the first move. The leading lines are still at value, the last advance being one which placed a leading line of goods at 11½ cents and then immediately put them "at value" again, but the other mills did not follow. The agents of the leading lines have announced that they will not make any price or show

sample cards for the spring of 1908 until the middle of September at the earliest, when it is expected that the old business will be cleaned up. The problem appears to be how to distribute a limited production over an almost unlimited demand, there being practically a waiting list even now.

RAILWAY EARNINGS IN JUNE.

There is no denying that the railways are doing a heavy business, and on the score of gross earnings there is little concern, but the investor, having in mind the high cost of materials and the increased wages paid to labor, is now more prone to closely observe the trend of net receipts. During the first three months of the current year the tendency of net earnings was toward a lower level, owing in large part to the inclemency of the weather; but in April, May and June developments were just the opposite; that is, increases were registered in each month. In April and May gains were very heavy, but it should be remembered that comparison was with a rather unfavorable period in 1906, the coal miners' strike being then at its height. With the coming of June, 1906, conditions became more normal, and so the returns for June the current year have a fair period with which to compare. Therefore, it is interesting to note that results for the month are gratifying, gross earnings showing an increase of 15.7 per cent. over June, 1906, on a total of $114,168,697, while net receipts advanced 10.6 per cent., the aggregate being $35,339,767. This ratio of increase in net earnings is somewhat below the figures scored in each of the preceding two months, April and May, when the gains amounted to 25.5 per cent. and 17.5 per cent. respectively; but, as we have already explained, these increases were only large by contrast with an unsettled period. Another favorable feature of the returns for June is found in the fact that operating expenses advanced but 16.6 per cent., enough, to be sure, but not so much as in April or May, when the increases amounted to 22.8 per cent. and 20.1 per cent. respectively. Returns for forthcoming months will be watched with interest to see what effect high wages and increased cost of materials will have on net revenue.

On this occasion the monthly reports are not so numerous as they ordinarily are, because many of the roads have omitted to furnish a return for June, owing probably to the fact that the annual reports are in course of preparation, but in the following we give the returns for all roads thus far reporting for the month of June:

	1907	1906	*Inc.*
Gross earnings	$114,168,697	$98,670,956	15.7
Operating expenses	78,828,930	66,745,477	16.6
Net earnings	35,339,767	31,925,479	10.6

Divided into groups, the gross earnings make this showing:

JUNE.	1907	1906	*Inc., per ct.*
Northwestern	$8,449,047	$6,705,827	26.0
Central western	10,700,349	9,455,725	13.1
Trunk lines	23,985,509	21,376,450	12.2
Eastern	3,286,115	2,707,797	21.3
Anthracite coal	5,246,765	4,921,854	6.5
Southern	19,934,848	18,439,715	8.1
Southwestern	17,349,154	14,353,452	28.7
Pacific	25,216,910	20,710,136	21.7
Total	114,168,697	98,670,956	15.7

Increases, it will be noted, are very heavy, four groups—the southwestern, the northwestern, Pacific and eastern—furnishing gains in excess of 20 per cent. The central western and trunk lines contribute accretions of 13.1 per cent. and 12.2 per cent., while the southern roads and the anthracite coal interests display increases of 8 per cent. and 6.5 per cent. respectively.

Net earnings, when divided into group form, make this showing:

JUNE.	1907	1906	*Inc., p. ct.*
Northwestern	$2,378,589	$2,094,708	13.5
Central western	3,664,371	2,758,994	32.8
Trunk lines	7,495,907	6,911,419	8.4
Eastern	1,157,968	901,165	28.4
Anthracite coal	1,841,078	2,206,149	*16.5
Southern	5,136,290	5,292,049	*2.9
Southwestern	5,918,364	4,979,433	18.8
Pacific	7,747,200	6,781,562	14.2
Total	35,339,767	31,925,479	10.6

* Decrease.

Gains are general except in two cases, the hard-coal carriers and the southern roads, the losses being 16.5 per cent. and 2.9 per cent. respectively. The two heaviest increases are returned by the central western roads, 32.8 per cent., and by the eastern lines, 28.4 per cent. The southwestern roads return an advance of 18.8 per cent., the Pacific one of 14.2 per cent. and the northwestern 13.5 per cent. The smallest gain—8.4 per cent.—is reported by the trunk lines.

The swings in gross and net earnings for eighteen months back are shown in the following table:

	Per cent. inc. Gross	Net
	1907	1907
January	8.2	*2.4
February	7.7	*5.9
March	10.2	*0.2
April	23.6	25.5
May	19.3	17.5
June	15.7	10.6
	1906	1906
January	20.3	44.0
February	26.8	70.9
March	12.0	14.0
April	5.2	4.3
May	9.3	11.8
June	11.0	13.0
July	13.1	17.1
August	12.5	11.9
September	8.0	5.0
October	11.3	9.7
November	7.2	3.2
December	8.9	2.0

* Decrease.

Leading individual increases scored in June last over the same month in 1906 are set forth in the subjoined:

Illinois Central	$604,753
Canadian Pacific	477,056
Union Pacific	465,596
Pennsylvania (east of P. & E.)	431,700
Southern Pacific	321,918
St. Louis & San Francisco	296,076
Buffalo, Rochester & Pittsburgh	278,081
Rock Island	208,543
Pennsylvania (west of P. & E.)	202,700
Atchison, Topeka & Santa Fe	191,518
Kansas City Southern	182,985
Norfolk & Western	150,922
Missouri, Kansas & Texas	150,018
Canadian Northern	119,500
Southern Railway	108,723
Hocking Valley	103,890
Baltimore & Ohio	96,746
Total	4,390,725

The only important decrease was that of $319,149, reported by the Atlantic Coast Line.

JULY AND SEVEN MONTHS' TRADE.

The most notable feature of the July foreign trade figures, as of those for some recently preceding months, is the relatively more rapid gain shown in imports as opposed to exports, pointing to a balance of trade in favor of exports for the first month of the present fiscal year close to the vanishing point, the smallest excess, in fact, recorded for several years past. Another thing worth noting is that while exports of breadstuffs, meats, animals, oils and "other exports" show gains over July a year ago, those of cotton in that month, as in June, showed a heavy decrease, indicating that this branch of exports is inclined to show recession after several years of heavy and progressive increases. Taken as a whole, therefore, while export trade shows gains over a year ago, the increases are very moderate, and there will have to be marked gains in other lines of export, or imports will have to show a falling off, if the very favorable returns of past years in exports as compared with imports are to be maintained.

The imports and exports of merchandise for July and the seven months ending therewith compare with corresponding periods of two preceding years as follows:

July	1905	1906	1907
Imports—Free of duty	$35,936,889	$41,246,083	$56,883,762
Dutiable	48,575,717	61,346,366	67,880,301
Total	84,512,606	102,592,449	124,764,063
Exports—Domestic	105,404,155	109,376,517	126,136,751
Foreign	2,526,266	2,316,757	2,628,603
Total	107,930,421	111,693,274	128,765,354
Excess of exports	23,417,815	9,100,825	4,001,291
Seven mos. ending July			
Imports—Free of duty	301,920,626	326,389,563	394,312,683
Dutiable	372,533,414	413,562,216	481,730,563
Total	674,454,040	739,951,779	876,043,246
Exports—Domestic	831,468,174	953,071,269	1,051,733,516
Foreign	17,431,297	15,564,733	17,482,210
Total	848,899,444	969,536,002	1,069,215,726
Excess of exports	174,445,404	229,584,223	193,172,480

There is here shown a gain in imports of merchandise in July over the same month a year ago of 21.6 per cent., and the excess over July, 1905, is 47.5 per cent., while the gain in all exports over July last year is only 15.2 per cent., and the excess over July, 1905, is only 19.2 per cent. For the seven months the gain in imports is 18.5 per cent. over 1906 and 20 per cent. over 1905, while the increase in exports is only 10.3 per cent., and the excess over 1905 is 25.9 per cent. The directions in which export trade has contracted or expanded for July and the seven months are shown best in the following tables:

July	1907	1906	*Changes, p. ct.*
Breadstuffs	$10,868,250	$7,752,007	Inc. 40.1
Meats and dairy prod	16,834,395	14,923,652	Inc. 13.4
Animals	3,084,705	2,626,683	Inc. 17.7
Cotton	5,301,339	9,580,748	Dec. 44.6
Mineral oils	8,194,342	6,048,405	Inc. 35.4
Total above	44,343,031	40,931,495	Inc. 8.3
Total others	84,422,323	70,761,779	Inc. 19.3
Total all exports	128,765,354	111,693,274	Inc. 15.3
Seven mos. end'g July 31			
Breadstuffs	97,407,580	98,702,015	Dec. 1.3
Meats and dairy prod	109,785,616	114,664,571	Dec. 4.3
Animals	22,141,945	24,798,466	Dec. 10.5
Cotton	234,109,628	170,673,123	Inc. 37.6
Mineral oils	46,666,761	46,454,106	Inc. .4
Total above	510,112,530	455,292,281	Inc. 12.0
Total others	559,103,196	514,243,721	Inc. 8.9
Total all exports	1,069,215,726	969,536,002	Inc. 10.3

For July, it will be seen, all leading branches of export trade show a gain over July, 1906, except cotton, which fell off 44.6 per cent., while for the seven months cotton and mineral-oil exports show gains, and breadstuffs, meats and animal exports show losses.

THE LIMITATION OF ARMAMENTS—AN ASPIRATION.

From the beginning of The Hague conference it has been plain that no proposal of any definiteness looking to the limitation of armaments could secure any considerable measure of support. Indeed, that conclusion was reached by most people who give attention to international politics before the conference was convened. Some unofficial discussion of the subject has been had from time to time by delegates from the leading nations, but it has only had the effect of confirming the impression previously formed, and of demonstrating that any other than an academic treatment of the question was impossible. The conference was thus confronted with the necessity of making no definite recommendation regarding a subject which, however, it could not absolutely ignore, but was obliged to treat in a sympathetic manner. It has met the situation by substantially affirming the general declaration upon the subject made by the first conference held eight years ago.

After dragging along through a period of many weeks the matter was at length brought before the conference at a plenary session held on Saturday, when Sir Edward Fry, one of the delegates from Great Britain, introduced a resolution bearing on the subject. He recalled the fact that the Emperor of Russia in convoking the first peace conference had as a primary purpose the stoppage of the augmentation of armaments, and that in the interval the solution had become more and more urgent in view of the manner in which armaments had been extended. Referring to the military expenditures of various nations, he said that the British government, recognizing that several powers desired to restrict their military expenses, was ready to communicate once a year to those powers inclined to do likewise its projects for the construction of new warships as well as the expenses involved therein, believing that such an exchange of information would facilitate the interchange of views between the governments concerned regarding the reduction of armaments. At this stage M. Nelidoff read to the conference some communications regarding the limitation of armaments, including a disarmament convention between Argentina and Chile, and a letter from Mr. Choate, of the United States delegation, supporting the resolution presented on behalf of Great Britain, the terms of which had been previously communicated to the delegates.

M. Nelidoff then went on to say that Russia had presented the first proposition aiming to prevent the increase of armaments, but that contact with reality showed the difficulty of carrying out the generous idea. Indeed, when the committee of the first conference discussed the question of disarmament, the divergence of opinions assumed such a character as to threaten the accord of the delegates and the work of the conference. Then it was agreed that the question was not mature, but the conference unanimously approved the resolution recalled by Sir Edward Fry. However, even the wish expressed by that resolution was not carried out. Only Argentina and Chile succeeded in concluding a disarmament convention, while the greater part of the European powers had other matters to occupy their attention, such as the disorders in China, the Boer war, and finally the colossal war between Russia and Japan, not to mention small colonial conflicts or diplomatic difficulties which had obliged some of the powers momentarily to augment their armaments instead of studying their limitation. For these reasons the Russian government had not included in the programme of the present conference a discussion of the limitation of armaments, considering that the question was not mature enough for fruitful debate.

In conclusion, the president of the conference said that if the question was not mature for discussion in 1899, it was not any more mature in 1907. He expressed the opinion that any debate upon the matter, sterile in itself, would be injurious to the cause of peace as showing the divergency of opinion existing, while, on the other hand, a unity of intentions existed which

might one day lead to their realization. Under the circumstances, he said, he could see no other way in which to show the interest of the powers in the question than by adopting the British resolution, and he proposed that it be passed unanimously as constituting the only guarantee of further progress with the question. After an expression of sympathy on the part of France with the British proposition by M. Bourgeois, who introduced the resolution on the subject in the former conference, the resolution introduced by Sir Edward Fry was adopted in the following terms: "This conference confirms the resolution adopted by the conference of 1899 regarding the limitation of military burdens, and as military burdens have been considerably augumented in almost all countries since 1899, it declares it is highly desirable to see the governments earnestly resume the study of this question." This means, as was said in these columns last week, that the question of disarmament is regarded as still resting in the domain of aspiration and of academic discussion.

AN UNSUCCESSFUL MERGER.

When the Interborough-Metropolitan Company was formed in the early part of 1906 to effect a practical merger of the New York City subway and elevated lines with those of the Metropolitan Street Railway system, many conservative financial interests criticised the merger on the ground that it was overcapitalized. Nevertheless, the scheme went into effect. Attempts to popularize the securities created by the holding company have, however, been unavailing. It is true that the 4½ per cent. Interborough-Metropolitan collateral trust bonds, secured by the deposit of all of the Interborough Rapid Transit or subway stock, save a small amount, were started at 90 or more, and that the preferred stock of the Interborough-Metropolitan Company was quoted originally at 87 or upward. Quarterly dividends of 1¼ per cent., or at the full rate of 5 per cent. per annum, have been paid on the latter stock since July, 1906, but this did not seem to impress the investing community or to reassure the public as to the safety of the company's position, in the face of the very evident fact that the earning power of the combination had been overestimated and that the scheme was in danger of proving a failure.

Even before the creation of the present Public Service Commission and the investigation of the traction combinations in New York, which was the first subject to be taken up by the metropolitan section of that body, there had been ample evidence of distrust of the organization. The earnings of the Metropolitan Street Railway system, or, rather, of its lessee, the New York City Railway Company, left little room for doubt that the maintenance of the 7 per cent. dividends on the Metropolitan Street Railway stock was in jeopardy, and that the Metropolitan Securities Company, the artificial intermediary in the matter, had been organized on unsound principles, not having been provided with adequate cash capital at the start, and being, indeed, dependent upon the ability or willingness of its shareholders to pay off the final installments in cash.

It has, therefore, hardly been necessary for the investigation by the Public Service Commission and its counsel, Mr. Ivins, to start a widespread discussion of the traction situation and outlook. The quotations of the past fortnight, which have brought the Interborough-Metropolitan common shares to so low a figure as 8, the preferred stock to 20½, and the 7 per cent. "guaranteed" Metropolitan Street Railway to 40 (it sold in 1899 at 269), are eloquent as to the estimate which the market itself places upon the stability of the combination. Moreover, the 4½ per cent. collateral trust bonds, which represent control of the subway and of the lease of the elevated lines, and which therefore have behind them the principal intrinsic value of the whole organization, have touched as low a price as 53.

The "street" may be premature in assuming that the dividends on Interborough-Metropolitan preferred stock will cease, or that default will occur in the payments on the Metropolitan Street Railway shares or in the interest upon the 4½ per cent. bonds. There seems, however, to be a very decided impression in that quarter that the greatest traction combination on record is destined to resemble the condition of the one engineered under similar auspices in connection with the street railways of Chicago, and which has been giving so much trouble to investors, to financial leaders and to the courts in working out a practical plan of regeneration. The later revelations made before the commission, the continued weakness of the stocks, and the adverse rumors which accompany these developments, seem, in fact, to indicate that serious difficulties may result, it being also noteworthy that minority holders of the Metropolitan Street Railway are moving for the creation of a protective committee.

ENGLISH COTTON GOODS DEMAND QUIETER.

Manchester, August 12.—The Lancashire cotton trade is quiet so far as new business is concerned. Both spinners and manufacturers find their order lists running down, and their position is not so strong as a few months back. Business in piece goods is restricted owing to the high range of values. The inquiry has been of fair extent, but buyers and sellers are apart for large lots. Here and there manufacturers have accepted low rates in order to keep their looms well supplied with work. Demand for China has been a little better, but the business cannot be described as general. The piece goods trade with Egypt has been considerably upset by financial difficulties of firms trading with that country. Several local houses have had to call their creditors together. In most cases a proposal has been made for the payment of debts in full over an extended period of time. A good deal of uncertainty continues as to whether this arrangement will work out satisfactorily. In the meantime business is at a standstill. Very little has been done for the Levant, stocks being too heavy in that outlet. The prospects all round for manufacturers are discouraging. It is probable that it will be some time before makers can obtain business at a reasonable margin of profit. Buyers are unable to pay to-day's stiff rates, and sellers have to take the best prices possible. Our exports of cloth during July were on a very extensive scale and much larger than in the same month of the two previous years, as will be seen from the following comparative table:

	July, yards	*Seven mos., yards*
1907	634,158,100	3,769,999,000
1906	573,527,800	3,690,231,400
1905	510,440,000	3,515,911,300

Bombay took much more freely than last year, and shipments to Brazil and Egypt are on a large scale. China continues to show a falling off, but it is understood that stocks in Shanghai are being reduced, and prospects for that market are more encouraging than a little time back. It is of interest to note that exports of bleached, printed and colored goods are increasing, while in gray and unbleached cloths the yardage is less than in 1906.

The margin of profit for spinners of American yarns for home use is not so good as a month ago. Manufacturers of cloth have bought from hand to mouth, and spinners have scarcely sold the production of the spindles. In certain kinds, such as coarse wefts, the demand has been poor, and where sales occur, producers have not done at all well, the prices obtainable being unsatisfactory. Ring yarn has fallen off in demand, and beams are said to be in stock at certain mills. It seems likely that spinners will have to be satisfied with a reduced margin of profit in the near future. If prices between yarn and cloth become adjusted business may be helped through, but the production of yarn is increasing and there is not likely to be much scarcity henceforward. An effort was made a fortnight ago to stop the spindles an extra week in addition to the ordinary holidays, but the necessary majority of the members of the federation could not be obtained to support the suggestion. Most producers of fine numbers are still in a fairly healthy position, and they cannot see their way to restrict the production at such a time. Egyptian yarns have presented very little change, but owing to the lengthy engagements of producers, prices have been fairly well maintained. Some extensive business for thread-producing firms has transpired, which fortified spinners generally. Foreign trade in yarn continues to increase, the weight for July being much larger than in the same month of 1906. The following is a comparative table:

	July, pounds	*Seven mos., pounds*
1907	22,956,100	135,874,100
1906	17,305,800	122,452,200
1905	16,291,700	114,158,000

A feature of the shipments is the heavy weight being sent to Germany, and other continental countries are also taking more freely than last year. Japan is not doing so well, but the cases of decreased exports are not important.

The putting up of new spinning mills has not yet come to an end. Considering the high price of textile machinery and the difficulty of getting anything like early delivery, the projection of new spinning mills is somewhat remarkable. There will surely be sufficient yarn produced in Lancashire during the next year or two.

EDITORIAL NOTES.

Construction work on the Panama canal appears to be developing faster than was contemplated when the estimates for the current fiscal year were prepared. According to advices from Washington, reports from the Canal Zone show that the monthly estimate for expenditures on account of labor is being considerably exceeded, and in particular that work at the Gatun dam is progressing more rapidly than was anticipated. Indeed, it is said in a statement given out at the office of the Isthmian Canal Commission at the capital that the time of the completion of the canal appears to depend now upon work at Gatun rather than on the work of excavation, which has hitherto been regarded as the determining feature. It is now evident that the appropriation made at the last session of Congress would not be sufficient to supply the necessary plant to begin laying the concrete in the locks and dams during the next fiscal year, while progress already made indicates that such a beginning is advisable. In order to avoid reducing the force so as to keep within the expenditure already authorized for the fiscal year, the chairman of the commission has recommended to the Secretary of War that the work be allowed to proceed, and that Congress be appealed to at its next session to make good any deficiency in the funds now available. It appears that about $8,000,000 in excess of the appropriation already made could be used to advantage in pushing forward the work during the present year. It would be the part of wisdom for Congress to add the needed funds to those now at the disposal of the commission, so that this important work may be progressed. In any event this latest report will be received with gratification by the people, who have in the past heard many tales of discouragement and delay from the Canal Zone.

Another contribution to the literature of the Standard Oil prosecution has been made in the shape of a statement by President James A. Moffett of the Standard Oil Company of Indiana, in which he emphasizes "for the half million people interested in its welfare" the assurance of "the company's absolute innocence of wrongdoing in any of the prosecutions lately instituted against it in the federal courts. This is declared to be particularly so in the recent case in which the fine of $29,240,000 was imposed on the Indiana company. It is insisted that that was "no case of rebate or discrimination, but simply of the legality of a freight rate," and that "the verdict was obtained by the government upon the most hair-splitting technicalities, aided by the most rigorous exclusion of evidence that would have removed all presumption of guilt." Reference is made to some specific instances of the court's rulings excluding evidence which, by the way, will be reviewed in the regular way on appeal, and complaint is made of a persistent and adroit "warfare waged with all the overpowering authority of the federal administration against the Standard Oil Company." It is intimated that a special message of the President and certain reports of the Commissioner of Corporations were timed to influence the action of Congress. It is reiterated, on the other hand, that the company is carrying on a widespread business of great moment to the prosperity of the American people "in absolute obedience to the soundest principles of business and to the spirit and letter of the law."

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Deed—Signature—Unmentioned Person.

The New Jersey Court of Errors and Appeals held, in the case of Jason vs. Johnson, that the signing of a deed of conveyance by one who is not mentioned or described in the body of the instrument as a grantor has no effect at law to convey such party's estate in the lands described.

Homestead—Separate Parcels—Roadway.

The Supreme Court of Minnesota held, in the case of Brixius vs. Reimginger et al., that two separate ten-acre parcels of land touching only at the corners, between which is a regular roadway, if owned, occupied and cultivated as one farm, may constitute a homestead, although the residence and appurtenances are all located upon one tract.

Railroad—Negligence—Cutting Trees.

The Supreme Court of Errors of Connecticut held, in the case of Cowles vs. New York, New Haven & Hartford Railroad Company, that the mere neglect of a railroad company to cut down trees on its right of way in the vicinity of a grade crossing is not in itself actionable negligence in the absence of any statute requiring it to keep its right of way free from unnecessary obstructions to a view of the tracks by persons using an adjacent highway, although it may be considered with other circumstances in determining whether the company exercised care in the operation of its cars at a particular time.

Trade Name—Misrepresentations—Equity.

The New Jersey Court of Errors and Appeals held, in the case of Johnson et al. vs. Seabury et al., that where a complainant seeks to protect a trade name from unfair competition he will not be refused relief merely because for several years he circulated catalogues and price lists containing false statements as to his exclusive right to the name, where it is not proved that the trade name owes its value in a material degree to the false representations, and the publication has ceased prior to the filing of the bills. The court said: "We do not say that the mere discontinuance of publication before suit brought would cleanse the complainant's hands. We hold that in the absence of proof that the trade name was due to false representations, and upon proof that the false representations had ceased, the complainant is entitled to protection."

Sale—Non-Payment—Delivery.

The Supreme Court of Pennsylvania held, in the case of Frech vs. Lewis, that where a sale is for cash on delivery, if the buyer fails to pay, and on a subsequent promise to pay, the seller refrains from asserting his right to retake the property, it makes the delivery absolute. The court said: "Reliance upon a subsequent promise to pay that leads the seller to refrain from asserting his right to retake the property is in itself a waiver of the right and makes absolute a delivery which in the first instance was conditional. The right of plaintiff to recover back his property after he had delivered it resulted from the buyer's failure to keep his first promise. His failure to keep subsequent promises to pay could neither prolong nor revive that right. What defendant did or did not do is a matter that has no place in the inquiry; what the plaintiff did or failed to do is the determining consideration. Fraud and artifice practiced by defendant may excuse delay in attempting a recovery of property after delivery, but not mistaken confidence reposed in the defendant's promises."

Sale—Defective Article—Warranty.

The Kentucky Court of Appeals held, in the case of Berger vs. Standard Oil Company, that when a manufacturer or a furnisher of an article is negligent in its composition, construction or sale so that injury results, not to the vendee, but to a stranger, the general rule is that the seller is not liable unless either the article is an eminently dangerous one or the seller has knowledge of its defects, and that they are such as to endanger life or property without notice or warning of the defect. The case before the court was one in which an action was brought against the defendant company by an employee of one who had purchased a lubricating oil from the company for use on the machinery which the employee used, to recover damages for the loss of an eye by reason of the explosion of a glass tube containing the oil. The plaintiff alleged that the explosion occurred by reason of the dangerous and unsuitable quality of the oil, and that this fact was not known to the plaintiff, but was known or could have been known to the defendant company by the exercise of ordinary care. The court held that it was not error in the trial court in its instructions to tell the jury that the plaintiff could not recover if he could have discovered the faulty condition of the oil by the exercise of ordinary care before the injury. The court said that while one ought not knowingly to put on the market a dangerously defective product, the user of it uses it at his own risk if he knows of its defects, or if by the exercise of ordinary care he could have learned of them so as to prevent his injury from its use, he ought to have done so.

Improvement—Repair—Reconstruction.

The Kentucky Court of Appeals held, in the case of The City of Covington et al. vs. Bullock et al., that in determining whether an improvement made on a street is a "repair" or a "reconstruction" thereof, the rule is this: If the old skeleton or framework of the original structure is retained and the worn parts are replaced with new material of the same or kindred sort, it comes within the definition of repair. If, on the other hand, the old structure is torn away and a new one erected in place thereof, even though on the same general plan, then it is a reconstruction, and it is immaterial that a part of the material taken out of the old structure is put into the new.

Railroad—Employee a Passenger.

The Supreme Court of Rhode Island held, in the case of Enos vs. Rhode Island Suburban Railway, that a railroad flagman who received as compensation for his services a weekly sum of money and transportation tickets on the railroad to convey him to and from his work was a passenger while riding home on one of the tickets after his day's work had been fully completed. The court said: "In the case at bar the plaintiff earned fourteen tickets as well as $8 per week, and the fact that the tickets were purchased by work instead of cash is unimportant. The fact that they were bought and not given to him is important because such a ticket paid for his passage home in the car in which he was riding at the time of the collision; and the fact that his passage was so paid after his day's work was fully completed made him a passenger after his employment had ceased for that day."

Railway—Mail Carrier—Illness.

In the case of Decker vs. Chicago, Milwaukee & St. Paul Railway Company, decided by the Supreme Court of Minnesota, it appeared that the plaintiff was a railway mail clerk in the service of the United States and as such had charge of the mails carried in a mail car by the defendant, and brought an action to recover damages for personal injuries sustained by the alleged negligence of the defendant in not keeping the door of the car in such condition that it could be closed, in consequence whereof he contracted a cold and was made seriously ill. The court held that the plaintiff was, under the circumstances, a passenger on the mail car; that the defendant owed to him the same duty that it would to a passenger for hire therein, and that the questions of the defendant's negligence, and whether it was the cause of the plaintiff's illness and of his contributory negligence, were made by the evidence questions of fact.

Sales—Bond—Agreement—Prices.

The Supreme Court of the United States held, in the case of McGuire et al. vs. Gerstley et al., that sales of merchandise for which the purchasers have not been called upon to pay until four months have elapsed are covered, whether made on four months' credit or not, by a bond conditioned that the purchasers will pay the moneys due and to become due on merchandise sold and to be sold by the obligees, which the purchasers "have bound and hereby bind themselves to pay for in four months after the date of each respective purchase"; that pleas in an action on a bond given to secure sales of merchandise on credit which set up a breach by the obligees of a parol agreement respecting prices are insufficient where there is nothing in the declaration or bond which shows the existence of any such separate agreement, or that an alteration in the prices could or would have any effect upon the liability of the sureties, and that facts sufficient to constitute a valid set-off, recoupment or independent cause of action are not set up by a plea in an action on a bond given to secure sales of merchandise on credit which avers that the obligees induced one of the principals to dissolve the partnership existing between them and to enter the employment of the obligees for the purpose of ruining the partnership business, but contains no allegation as to how long the partnership was to continue.

BUSINESS NOTES.

The Real-Estate Boom in Mexico.

E. P. Lyle, Jr., writes in *World's Work:* "The American has appeared in Mexico City with his pet institution, the real-estate boom. He has plotted out swampy wastes into colonies, paved the streets with asphalt and planted trees. You turn a corner, and you leave gaudy stucco fronts and barred windows behind, and are at once in a wealthy neighborhood of modern American residences. Only the peaked sombreros dodging luxurious motor cars remind you that you are not in Washington. Ten years ago, for perhaps a solid mile of street, there would be no echo of the carpenter's hammer; to-day nearly every block is a din of hammering. Old buildings are being renovated; adobe and stone and mortar are undergoing transformation. In other cities there is the same phenomenon. In Guadalajara a thousand substantial buildings are going up, and labor is at a premium. There are old houses in plenty, but American residents want the new kind, with electric lights and running water, and the Mexicans are beginning to want them too."

New Supplies of Anthracite Coal.

W. E. Joyce writes in the *Engineering and Mining Journal*, in part: "A new coal vein just opened in the Black Creek district of Pennsylvania furnishes another remarkable proof that the theory which holds it impossible to find coal beneath the red shale or green sandstone is grossly misleading, and is responsible for the slow development made in anthracite mining. This is the conclusion reached by James M. Bohlin, geological student and extensive prospector, who has made two important disclosures where the seam was found beneath what was accepted as the red shale, adding 100 years to the life of the mine. Mr. Bohlin says: 'This field contains more unmined coal than has yet been taken out of the ground; in fact, the original coal measure has not been touched. The structural formation of the various basins indicates a common origin which has generally been accepted as an indication that the different basins are parts of a larger formation, which once covered a vast area. Destruction and reproduction seem to constitute the scheme of nature. In one place land is removed, in another it accumulates. This is exactly what took place when the anthracite formation was produced on the ocean floor. The unequal distribution of the load produced various sized troughs, which again became component. This is, of course, only a part of the general process by which the continent became uplifted and its divisions of land and water formed. I know, from personal investigation of nearly all the coal basins in the eastern middle coal fields, that they finally turn over and disappear, under such underlying formations, and can therefore be followed and become the source of a future supply of anthracite.'"

Musical Instruments.

The Bureau of the Census has just published a bulletin on the manufacture of musical instruments. There were 625 establishments engaged in this industry in 1905. They employed 35,220 wage earners, reported an aggregate capital of $72,225,379, and manufactured products to the value of $69,574,340. Five years before, when the census of 1900 was taken, the number of establishments reported for this industry was 619; total number of wage earners, 23,714; the aggregate capital, $47,706,582, and the value of products, $44,418,978. Comparison of the figures for these two censuses shows that there was an increase in the five-year interval (1900 to 1905) of $25,155,362, or 56.6 per cent., in the value of products; $24,518,797, or 51.4 per cent, in the amount of capital employed, and 11,506, or 48.5 per cent., in the number of wage earners. The establishments in the meantime increased by only six, or about 1 per cent New York state products were valued at $24,277,927, representing more than one-third of the total product of the United States. The state ranking next in importance was Illinois, for which the aggregate product was $13,997,728. Next came Massachusetts, with a product of $8,538,073; then Connecticut, with a product of $5,279,085. Massachusetts was second in importance in 1880 and again in 1890, but in 1900 was outranked by Illinois. Of upright pianos 251,957 were manufactured in 1905, and their aggregate value was $37,397,674. Of grand pianos 7,372 were produced, with an aggregate value of $3,661,423. Of reed organs the number was 113,065, and the aggregate value $4,162,053. Of pipe organs 901 were manufactured, with an aggregate value of $1,989,979. The number of upright pianos manufactured in 1905 exceeded the number reported in 1900 by 85,171. The census of 1900 reported the manufacture of 101 square pianos. In 1905, as far as manufacturing for the trade was concerned, the square piano was practically obsolete. It seems, however, that forty-three square pianos were made by special order. The manufacture of piano players and piano-playing attachments is of recent origin and shows a more rapid growth than any other branch of the musical instrument industry, the production advancing from $607,873 in 1900 to $2,029,754 in 1905. There may be persons of a statistical turn of mind who would like to know the number of street pianos and organs manufactured in the United States. This information is not to be found in the bulletin, but the aggregate value of such instruments produced in 1905 was reported as $50,016. The aggregate value of the piano and organ materials manufactured for sale was $13,128,315. Nearly one-third of the total product was reported for the city of New York.

A Year's Work at San Francisco.

The San Francisco *Chronicle* says: "The report of the state harbor commissioners, showing the quantities of building materials received at this port during the fiscal year, should, and we trust will, put an end to lamentations over the decadence of 'poor San Francisco.' They are so remarkable that we reproduce them as follows: Lumber, board measure, feet, 768,802,866; bricks, 27,593,108; gravel, crushed rock, tons, 517,360; shingles, 276,115,200; laths, 130,781,350; shakes, 4,301,775; cement, tons, 80,317; window glass, tons, 3,840. It is sufficient to say of this material that of lumber alone there was enough to cover the entire burned district with two-story flats. Of course, it is not being used for that purpose. The greater part of the burned district is being recovered with buildings in which steel, brick or cement are the most important materials, and we must point out that the statement does not include the structural steel. The fact is that rebuilding is going on at a most astonishing rate. The cost of permanent building done and under way must approach $100,000,000. The commerce of the city has not suffered at all, but is steadily gaining. The receipts of the port for the year have been $1,196,594, as against $912,132 in 1905. The customs receipts have kept pace with the increase of port dues. What has been accomplished would have been astonishing under any conditions."

Southern Iron Development.

The *Iron Trade Review* says: "While iron production in the south has been growing, it has not kept pace with the growth in production by the country at large. The state of Alabama made but 6.4 per cent. of the total production of the United States in the first half of this year, although no special conditions intervened, while in 1890 it contributed 8 9 per cent. of the total production. The five states—Virginia, Georgia, Tennessee, Alabama and Texas—in 1890 made 15.4 per cent. of the country's pig iron, while in the first half of this year they made barely 10 per cent. It is true the production of these states has increased, having, indeed, almost doubled in the seventeen years, but the production of the country at large has tripled. A part of this setback has been due to the decrease in charcoal pig-iron production in the south, as in 1890 the five states named put almost 12 per cent. of their output into charcoal iron, while this year the proportion was less than 2 per cent. The record of the past fifteen years does not carry out the glowing predictions which southerners made for the south prior to the slump of 1893. According to the opinions then held, the south, and Alabama in particular, had natural resources sufficient to give control of the iron industry of the United States at least, if not of the world. The fault lies much less with the natural resources than with the way in which they have been developed. It has been difficult to secure money for the south, and the money which has been secured has not always been wisely spent. Too much dependence has been placed upon the natural resources and not enough upon the work of man. The south's prospects are really better now than they have been at any time in the past. The rapid development of the Lake Superior region has given the south a setback relatively, but not absolutely. This very rapidity has given the industry using Lake Superior ores a handicap, by which the south must eventually profit, as the best of the Lake Superior ores, upon which the region's reputation was based, has been exhausted."

CURRENT BUSINESS NEWS.

Commercial.

In the six months ended June 30 last the United Kingdom exported products valued at £206,317,000, which compares with £180,594,000 in 1906 and £155,706,000 in 1905. The ten leading purchasing countries are set forth in the following:

	Six months ended June 30		
	1907	1906	1905
India, Ceylon and Straits	£26,540,000	£23,928,000	£22,622,000
Germany	18,565,000	15,403,000	13,213,000
United States	16,265,000	13,034,000	11,173,000
Australasia	15,306,000	12,933,000	10,858,000
France	11,545,000	10,041,000	7,995,000
Argentina	9,273,000	9,273,000	5,335,000
Canada and Newfoundland	8,487,000	6,267,000	5,555,000
Italy	7,215,000	5,058,000	4,612,000
Holland	7,030,000	5,879,000	4,803,000
Cape and Natal	6,813,000	7,700,000	7,614,000

Imports by the United Kingdom amounted in the half year to £328,365,000, as against £300,573,000 in 1906 and £273,124,000 in 1905. The first ten countries figuring in the United Kingdom's imports are given in the following:

	Six months ended June 30		
	1907	1906	1905
United States	£74,330,000	£69,066,000	£58,748,000
Australasia	32,940,000	27,569,000	24,796,000
India, Ceylon and Straits	27,781,000	23,244,000	21,727,000
France	27,301,000	27,570,000	26,322,000
Germany	19,068,000	18,593,000	17,139,000
Holland	17,471,000	17,700,000	16,799,000
Argentina	14,359,000	12,174,000	11,621,000
Belgium	13,954,000	14,842,000	13,599,000
Egypt	11,030,000	8,405,000	8,451,000
Russia	11,495,000	11,128,000	13,846,000

Figures of the foreign trade of Uruguay for the first half of 1906, just issued, and the first trade statistics that have appeared of that year, show a decrease in Great Britain's trade with that country. Imports total $17,000,000, of which Great Britain supplied $4,600,000, or 27 per cent. Her previous percentages were 30 to 33. Germany has risen from fourth or fifth place to second place, supplying $2,750,000, or 16 per cent. The next in order is France, $2,100,000; United States, $2,000,000; Argentina, $1,500,000, and Italy, $1,400,000. The half year's exports amounted to $20,000,000. France took $5,000,000; Belgium, $3,000,000; Germany, $6,600,000; Argentina, $2,800,000, and Brazil, $1,800,000. Only $750,000 worth was taken by the United States.

J. E. Rhodes, secretary of the Northern Pine Association, estimates that all the Minneapolis mills and those farther down the Mississippi river will show a decreased lumber cut this year, and that the total production of the mills in the association will fall off by about 240,000,000 feet, compared with last year. Twenty-seven mills reporting note decreases in output. Stocks of pine on hand total 822,000,000 feet, against a stock of 966,000,000 feet at this time a year ago. This shortage of about 144,000,000 feet in the ready supply in the yards of the association, together with the indicated production, do not argue for any cheaper prices.

Broomhall's latest mail report estimates the world's probable requirements of wheat this season at 33,600,000 bushels more than the imports of last season ending with July. Most of the increase is in continental Europe. United Kingdom will want 6,000,000 more; Germany, 16,000,000; Spain and Portugal, 8,000,000, while Italy will want 4,000,000 less. He figures the prospective supplies at 40,000,000 less than the actual exports of last season. He expects 120,000,000 from the United States, or 29,000,000 less than last season; Canada, 10,000,000 less; Russia, 27,000,000 more; Balkan, 37,000,000 less; Argentine, Australia and India, a trifle more. The shortage in supplies will be felt later in the season, rather than in the near future. The quality of the European crop appears above an average where it has been threshed.

The August report of crop conditions in Kansas makes the wheat crop 70,000,000 bushels, or 3,000,000 bushels in excess of the government's estimate. Spring wheat, the acreage of which is 183,000, is yet to be added. The condition of corn is placed at 74, ten less than the government's August report. The best corn condition is in the sixteen counties adjacent to the Kansas river. In many of the big counties the conditions are bad. Thus in Norton it is only 19, in Phillips 40, Jewell 50, Smith 20.

British exporters of hides are in a state of consternation over the new United States regulations compelling strict disinfection of hides before their exportation and requiring a certificate from the American consul at the place of export that the hides have been immersed in bichloride of mercury for half an hour before being packed. Such rigorous treatment has been unknown previously. The exporters assert that the new regulations will greatly restrict exportation to the United States. It is understood that, as the result of agitation on the part of prominent exporters, the enforcement of the new regulations has been postponed to November 1.

Following are the Bureau of Statistics' figures for the foreign commerce of the port of New York for the last three fiscal years:

	Imports	*Exports*
1905	$679,629,256	$524,726,005
1906	734,350,823	607,160,314
1907	853,696,952	627,982,049

Combined, the totals are:

1905	$1,204,355,261
1906	1,341,511,137
1907	1,481,679,001

Our total foreign commerce in merchandise in 1907 fiscal year was $3,315,000,000, of which New York's share was approximately 45 per cent. Of our 1907 foreign commerce $2,212,000,000 passed through Atlantic ports. New York handled $269,000,000 more than half of that; Boston had $225,000,000; Philadelphia, $165,000,000, and Baltimore, $142,000,000.

As a last resort to realize something on their tobacco crops, many farmers of Connecticut started on Monday to cut and string their immature plants. There has been no rain of any account. The plants are of good quality, but small.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News*: United Kingdom—Fair progress is being made in the cutting of wheat in the southern districts. The weather, however, is very unsettled. France—The harvesting of wheat is about finished. Indications point to a good yield, with the quality fine. Germany—The weather continues to show improvement; fair progress is being made in early crops. Wheat, however, is still uncut, and there is increased anxiety regarding the potato crop, which needs bright sunny weather. Hungary—An official report for August 15 places the yield of corn at 118,400,000 bushels. This indication is for a full average crop. Last year the corn crop amounted to 176,000,000 bushels, and in 1905 to 104,800,000 bushels. Austria—Indications point to a fair cereal harvest. Bulgaria—According to a semi-official report, the crop of wheat will be fully 24,000,000 bushels less than last year. The corn crop is very irregular, but an average yield is looked for. Russia—Occasional complaints are heard as a result of disappointing harvest returns for wheat. The outlook for corn is satisfactory. Italy—Some estimates point to a record yield of wheat, while others estimate a yield below last year. Broomhall estimates the yield fully equal to last year. The corn crop shows some deterioration as a result of drought.

Sauerbeck's index number of commodity prices in Great Britain on July 31 was 81.1, compared with 82 at the end of June, 82.4 at the end of April, and 79.7 at the end of December, 1906. At the end of July, 1906, it was 76.4.

The Commercial National Bank of Chicago, after getting returns from 30,000 correspondents in all parts of the country, reports that legitimate business interests throughout the country are prosperous; only the purely speculative markets are feeling the effects of money tension and stagnation. Not one of the thousands of replies negatives this conclusion in definite terms That there has been a marked easing down from the tension of the spring and winter months is generally admitted, but without a trace of regret or misgiving. The bankers of the country, with few exceptions in the far west, report an extraordinary demand for funds in all lines of business activity. Interest rates are firm everywhere. Bank deposits show a straight average increase of 14.2 per cent., against a similar average increase of 10.8 per cent in the loans.

Willett & Gray say: "Demand for sugar at this period of the year is dependent so much on the outturn of the fruit crops that we have called for special reports from our correspondents in all sections of the country and are publishing same as they are received. The reports to date from eastern, central and southern states and Ontario are uniformly more pessimistic as to this season's production than was anticipated, the indications pointing to a fall-short of one-fourth to three-fourths compared with the crops of last year, while the local stocks of sugar are about as usual. On the other hand, Arkansas and Pacific coast states have full crops."

Reports from western Canada, including Saskatchewan and Alberta, estimate this year's wheat crop at 95,000,000 bushels. The Canadian Pacific is running harvester excursions, as 22,000 men are needed.

The Bureau of Statistics has published a complete record of the Alaskan trade for the fiscal year ended June 30, 1907, which shows a total of $59,455,382, compared with $47,227,421 in the previous year. A steady increase in the Alaskan trade has been shown since 1899.

Financial.

After a meeting held Friday the directors of the Southern Railroad announced a reduction of the semi-annual dividend on the preferred stock to 1½ per cent. This is a reduction of 1 per cent. on the annual dividend, which was formerly 4 per cent., and is now reduced to 3 per cent.

Members of the New York Coffee Exchange voted to close the Exchange on August 31, the Saturday preceding Labor Day.

A New York Stock Exchange seat sold last week for $71,500. The previous sale was at $72,000.

Internal revenue receipts for the first month of the new fiscal year showed an increase of $1,528,960 over the same period last year. The total receipts from all sources were $24,928,828. The biggest increase was in the item of tax on unfermented liquors, $929,420. Tobacco came second as a revenue producer, increasing the revenue from that source over last year's returns $307,213.

John C. Capers, Commissioner of Internal Revenue, has reversed the former practice of the bureau in relation to the collection of inheritance taxes, and in a test case holds that a proper construction of the opinion of the United States Supreme Court in Vanderbilt vs. Eidman (196 U. S. 480) works a refunding of taxes on legacies which the legatee did not "possess or enjoy" prior to July 1, 1902. The ruling of the commissioner is based on an opinion of A. D. Hayes, solicitor for the department. In the test case a legacy was given to a daughter of the testator to be paid at the age of twenty-one. The inheritance tax law was amended meanwhile, directing a refunding of taxes collected on "contingent" interests that had not vested prior to July, 1902, the date the law expired. The department holds that no contingent legacy can be said to be vested until the legatee has actually entered into the possession or enjoyment thereof. The decision is far-reaching and will, it is said, result in the refunding of many thousands of dollars taken from estates by the Internal Revenue Bureau.

Discussing the money situation in Canada, the Montreal *Star* says: "The plain fact is that our need for money has outgrown the supply, and it has accordingly become scarce. Take Canada as an example. We are using more money here to-day in a month than a little while ago we wanted in a year. We are building two transcontinental railways. The west is filling up and our industries are being extended and worked overtime to supply the new settlers with goods. On all sides capital is being called for to be profitably employed, and it is no marvel that there is little left to lock up in municipal bonds or even safe industrial stocks. It is true that a lack of confidence does something. People have found out that tempting stocks have a way of not going ahead as they should, owing to the interested manipulation of those who control them. But the real trouble is the scarcity of money."

The doors of the Oregon Trust & Savings Bank of Portland, Ore., closed Wednesday. The assets are about $3,000,000, with liabilities of about $3,200,000.

It is said that the interest rate on the ten-year New York City assessment bonds, which are issued for street openings, street paving and curbings and new sewers, will be raised to 4½ per cent., and it is understood that both Mayor McClellan and Deputy Comptroller McCooey are in favor of insuring a large sale of the fifty-year corporate stock by increasing the rate of interest on that class of security also to 4½ per cent.

The London *Statist*, reviewing the profits of the London Clearing House banks during the fiscal year ended June 30, 1907, shows that with an employment of $2,600,000,000 of funds the banks made net earnings of $65,000,000, out of which they paid in interest to depositors $35,250,000, leaving a net profit of $31,920,000, and enabling the banks to pay in dividends over $30,000,000. The net profit of the Clearing House banks amounted to nearly 12 per cent. upon the total capital and surplus of these banks, or to over 19 per cent. upon the paid-up capital only. The Bank of England paid 9 per cent. in dividends during 1906, and Martin's Bank paid 8 per cent., but the dividends of fifteen other leading London banks ranged from 11 to 20 per cent. During the calendar year of 1906 the trust companies of the state of New York earned profits of 40 per cent. upon their capital. They declared $11,660,000 in dividends and added $14,830,000 to surplus. The average dividend was about 19 per cent. Thirty-seven New York City banks during the same year earned about 25 per cent. on their capital.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The sales of bank and trust company stocks on the Stock Exchange and at auction since the beginning of July, compared with the prices of a year ago, have been as follows:

* Sales made at auction.

It is understood that the proposed issue of $800,000 of first mortgage 4 per cent. bonds of the Philippine Railway Company, interest guaranteed by the Philippine government, issued under the act of Congress, approved February 6, 1905, will be accepted by the Treasury Department as security for deposits of public moneys of the United States in substitution for railroad, state or municipal bonds now held by the department as security for such deposits, the bonds to be accepted at 90 per cent. of their market value. It is understood, of course, these terms apply only to the bonds issued at this time, as any general decision committing the department concerning future issues is considered unwise. The bonds in question have been fully prepared for issue and will shortly be offered for sale.

Railroads.

Reports from Wall street Friday had it that the Toledo, St. Louis & Western Railroad had acquired control of the Chicago & Alton.

It is reported that the New York, New Haven & Hartford Railroad Company has ordered 122 locomotives, 7,500 freight cars and 142 passenger cars, the whole involving $12,000,000. Deliveries are to be made within the next two years.

The Russian Minister of Railways has submitted to the Council of Ministers a scheme for improvements in the state railways, which it is proposed to carry out during 1908-12. The total estimated expense is $458,000,000, divided among five annual budgets. The principal items are: Doubling tracks, $46,000,000; bridges and embankments, $30,000,000; stations, $59,500,000; workshops, $52,000,000; rerailing, $30,000,000; rolling stock, $151,000,000.

Industrial.

An Omaha dispatch says the Harriman lines are to be supplied with coal from Australia, while contracts have been made for 2,000 tons a week from Illinois, at $1 a ton and $7 a ton freight to Garfield, Utah.

In connection with a special meeting of the New York and New Jersey Metal Trades Association, held Wednesday, to take action on the demand of the International Association of Machinists and of the Amalgamated Society of Engineers for an increase of 25 cents a day in wages for 17,000 machinists in New York and vicinity, this statement was made by Henry C. Hunter, secretary of the association: "The members in the discussion of the demand were confronted with the fact that present business conditions indicate an end of business prosperity for some time to come. Reports from the members showed a reduction in business of from 25 to 30 per cent. in the present year, but principally during the last month, and the still more discouraging condition of almost a cessation of inquiries for future business."

Miscellaneous.

The London *Chronicle* says that a foreign government, supposed to be Russia, has awarded to a north of England firm of shipbuilders, believed to be the Armstrongs, a contract for several battleships, cruisers and gunboats. A record insurance of nearly $35,000,000 has been effected on the building and launching risks, the policies covering two years.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Buyers' excursions have been a feature of the week, and the leading primary markets of the country have been filled with country merchants. As a result house trade has been stimulated, and orders for dry goods, clothing and shoes show considerable improvement. Fall business, except at a few centers, is said to equal a year ago at this date, the volume being made up of numerous orders rather than by any special interest or interests placing heavy business. In fact, many merchants display a disposition to go slow, fearing that orders may fall off, not because of a decline in consumption, but more particularly because of the tightness of money. Crop reports are irregular in character, cold weather in the northwest and hot, dry weather in the southwest having had unfavorable effects on spring wheat, flax, oats and cotton. There is a disposition to believe, however, that if damage has been done, it is more a matter affecting quality than quantity. Reports from industrial centers furnish evidence of increased quiet, pig iron and metals particularly. Money is in active demand the country over; rates are higher, and New York is shipping money to the west in large volume. Banks are not disposed to further extend loans, although they are reported taking care of the legitimate wants of their customers. Collections are not up to the usual volume. At the same time there is a more assured tone in stock market circles, though advances meet with renewed bearish operations, and bonds are still depressed, and some municipal securities meet with very slow sale. Bank clearings show a shrinkage from a year ago, mainly because of reduced totals at New York, where stock speculation is much quieter than in 1906. Railway gross earnings are still good, though gains are not so heavy as earlier in the season, partial returns for the first half of August indicating an increase of 8 per cent. The influence of the telegraphers' strike on business is waning.

Harvesting of spring wheat in the northwest is quite general, and the indications are that yields will not be heavy. Cutting has begun as far north as central and southern North Dakota. Frosts early in the week hurt wheat, flax and oats, and while the extent of the injury is not known as yet, it is probable that grades have been somewhat reduced. While corn has made fair progress, the condition of the crop, on the whole, is irregular, hot winds in the latter part of last week having injured prospects in Nebraska and Iowa, and relatively low temperatures retarded growth this week. Best reports regarding this crop come from the southwest, but even there plenty of hot weather is needed. On the whole the crop is still backward, needs warm weather and moisture, and some sections will not make any corn to speak of this season. Reports regarding oats point to a short crop of poor quality. Farmers, however, are demanding high prices, despite the inferior character of the product. Hay promises one of the best crops in recent years, and a large grape crop is expected from California. In the east, truck and garden products in general need rain very badly. New-crop cotton has appeared in several primary markets within the week. In the Savannah district cotton has been damaged 10 to 15 per cent. by continuous rains. An average crop is expected in Tennessee if frosts are late. In Louisiana crops are good, and in Arkansas cotton is improving. In Alabama the crop is being helped by hot, dry weather. Good reports come from Florida regarding cotton, but a short citrus crop is indicated. In Texas the cotton plant is being hurt by lack of moisture, but thus far there is no great damage from insects.

A cold wave in the northwest was the cause of a sharp rise in wheat, prices advancing at one time 4 to 5 cents. The week opened with prices easy, favorable weather, the unsettled Wall street situation, good northwestern reports, and a prediction of 70,000,000 bushels yield in Kansas, making for slightly lower prices on Saturday. On Monday prices were stronger on small world's shipments, a good decrease on passage, and cool weather in the northwest, and on Tuesday and Wednesday the market was strong at the highest of the week on reports of frost damage in North Dakota and Canada, BRADSTREET'S small increase in the visible supply, and estimates of large European requirements the coming season. On Thursday there was some liquidation, and prices lost 2 cents of the early advance at one time on less alarming reports of damage from frost. The official visible supply published that day showed a large increase. Corn was strong early on cold weather, large decreases in the "on passage" item and light country offerings, scoring an advance of 2 to 3 cents, later shaded in sympathy with wheat, but holding 2 cents of the advance to the close. Oats were irregularly strong and 3 cents higher early, losing a trifle of this later. On Friday the grain markets were all strong and closed at the highest of the week. Provisions showed few new features and were practically unchanged. Cotton-seed oil was steady. Dairy products strengthened slightly on the week.

Cotton was easy early on liquidation, due to stock market influences and reports of rains in Texas, but lost only 6 to 10 points net up to Wednesday, when the bulls forced covering, aided by bad Texas crop reports, and all the loss was regained with a small addition, which was, however, lost again on Thursday on reports of showers in Texas, but advanced again on Friday. The net change for the week was 5 to 7 points advance in futures, while spots gained 10 points.

The cotton goods manufacturing situation is in an interesting and almost unprecedented situation. In spite of high raw material and expensive cotton, the mills are prosperous, dividends large, surpluses heavy, and their stocks sell at high prices. On the other hand, owing to the uncertain money situation and some minor labor troubles, there is an increasing undercurrent of conservatism in the trade The mills are oversold, many makes are "at value," and some manufacturers are refusing orders. All in all, the situation is such as to repay examination, which is rendered possible by an article in another column.

While orders on the books of English cotton mills are very large, new business is considerably lighter. This is especially true of cloth, new demand for which is especially light. Efforts to bring about smaller production are noted. Shipments of cloth and yarn, all on old orders, are very large. New mill building is still being done despite high cost of machinery, and there is little doubt that yarn production will be heavily increased in the next two years.

Imports, judging from the July foreign trade figures, are still gaining more heavily than exports, which, while feeling the effects of larger exports of breadstuffs, provisions, animals, oils and "other exports," show the weakening effect of smaller exports of cotton. Imports in July increased 21.6 per cent., while exports gain only 15.2 per cent., as compared with July, 1906. The excess of exports over imports also was only $4,000,000, or 3.2 per cent. in July. For seven months cotton exports gain 37.6 per cent. and "other exports" gain 9 per cent., breadstuffs decreasing 1.3 per cent., meats 4.3 per cent. and animals 10.5 per cent., all exports increasing 10.3 per cent. over 1906, while imports gain 18.5 per cent.

The woolen and worsted manufacturers bought more heavily directly from the growers this season than ever before, paying fairly high prices. Demand is largely for worsteds and the finer grades of woolen goods, but is rather slow at present, and the total of orders thus far taken is below expectations, but this, it is hoped, will be remedied when the duplicate orders commence to arrive. The outlook is only fair at present, as there is a possibility of the stoppage of manylooms for lack of work to keep them running.

Because offering comparison with a normal period a year ago, the June report of net railway earnings is both interesting and gratifying. Gross earnings gain 15.7 per cent. and net returns 10.6 per cent. over June a year ago. The gains in April and May in net were 25.5 and 17.5 per cent. respectively, but these were based on abnormal conditions in 1906, when the coal miners' strike was on. Gains in net are shown in all groups but the anthracite coal and southern roads.

In iron and steel there is more of a disposition to speculate as to the future of trade. New business has declined all around, but the plants are well provided with orders for the balance of the year, and specifications against old contracts are coming in freely. Pig iron continues very quiet, demand being of a hand-to-mouth character. The undertone as regards prices is less favorable, and some foundries are said to be seeking loopholes for getting out of high-price contracts placed early in the year. These actions are responsible for the appearance of resale iron, in the Cincinnati district especially, where No. 2 Birmingham is quoted at $19 to $19.50 for prompt delivery. Bessemer billets, as well as open-hearth billets, are lower. It is reported that the leading interest has sold a heavy tonnage of sheet bars to English and German interests, delivery to be made during the last quarter of this year. Business in steel rails is very quiet, but it is said that some foreign contracts are pending. On the other hand, demand for structural material is very good. Large-sized cast-iron pipes are affected by the inability of some municipalities to float their bonds. Trade in sheets, tinplates, bar iron and tubes is less active, and some falling off in inquiries for steel bars is noted, although in special instances this commodity commands premiums. Old material is dull and depressed, the market being overstocked, while consumption has fallen off. Owing to a lack of laborers in the coke region, production has decreased, spot supplies are scarce and prices are very firm. Wire and wire products continue in heavy demand. Lead, spelter and tin are weak. Copper is dull and prices are weaker than heretofore, and it is said that some small lots of electrolytic copper have been disposed of at 17⅞ cents a pound, but it would probably be impossible to place a large tonnage at that figure.

The New York stock market was dull and easy at a moderate recovery in quotations, due to improved feeling regarding the political situation as bearing on railroads and corporations, a reduction in the Southern Railway dividend on Friday causing a setback. Breaks in New York local traction securities have been features. Foreign exchange is lower after a sharp advance, based on unsettled financial conditions abroad and an expected further advance in the Bank of England rate, which, however, did not materialize. A shipment of $1,100,000 gold was made to Germany early in the week, being apparently a "special" order.

Bank clearings for the week ending August 22 aggregate $2,576,606,000, 6 per cent. under last week and 20 per cent. below this week last year. Outside of New York exchanges amount to $1,028,539,000, 1.8 per cent. under last week, but 8 per cent. over the week last year.

Business failures for the week ending August 22 number 153, against 146 last week, 155 in the like week of 1906, 176 in 1905, 185 in 1904 and 142 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending August 22 aggregated 3,565,347 bushels, against 2,947,433 bushels last week, 3,196,375 bushels this week last year and 6,606,989 bushels in 1901. For the first eight weeks of the fiscal year the exports are 22,476,540 bushels, against 18,124,600 bushels in 1906-07 and 51,941,534 bushels in 1901-02. Corn exports for the week are 1,120,546 bushels, against 1,441,727 bushels last week and 663,504 bushels in 1906. For the fiscal year to date the exports are 11,832,505 bushels, against 5,767,614 bushels in 1906-07.

IN CANADA.

Fall and winter trade in Canada has been heavy, and there is, in addition, some movement still in reorders of summer fabrics. Cool weather in the northwest has given some concern as to wheat, but serious damage reports are denied. Tight money is still a source of complaint, and reports are of overcautiousness from the northwest. At Montreal trade is brisk, there is a better tone in the stock market, shipments of dry goods are heavy and industry is active. Toronto reports that fall trade has been large, that dry-goods deliveries are slow and that the sales of fall millinery exceed last year by one-third. A good trade in furs and boots and shoes is indicated. Wholesale trade is brisk in the northwest, money is tight and collections are slow. Trade is good in British Columbia, but the salmon pack is light, and in some districts almost a failure. Clearings for the week aggregate $87,057,000, a gain of 8 per cent. over last week and of 24 per cent. over last year. Failures for the week number 19, as against 30 last week and 10 in this week a year ago.

TRADE REPORTS.

At New York the business in dry goods is of goodly proportions; large orders have been booked for spring delivery on dress goods and silks. Foreign woolens have also been in good demand and domestic woolens have been fairly active, though business in this connection is a little backward. Collections are good in the dry-goods trade, but slow in the clothing trade. Prominent firms in wholesale men's furnishings and manufacturers of shirts, waists and neckwear have obtained large early orders and regard prospects as favorable. Sales have been large in wholesale hosiery and knit goods. Commission dealers have sold ahead and jobbers have large early orders. Some who are conservative think that the policy is to retrench, but others believe prospects are favorable. Collections in the retail trade in these lines are slow. The general stringency in the money market has caused some uneasiness among importers of furs. Prices, however, continue firm and the outlook in this line is fairly good despite threatened labor troubles. Wholesale millinery is doing well, but retail trade is dull. The retail grocery trade is slow. Receipts of eggs are declining, demand is good and prices are up 1 cent. Butter, poultry and cheese receipts are fair and the market firm. Tomato receipts are heavy and prices are low. Onion and potato receipts are fair and the market is steady. Apple receipts are light and prices are high. Liquor is inactive. Collections are slow. Manufacturers of jewelry report a fairly active demand, but retail business is dull, and in the diamond trade there is little activity. The wholesale notion line is up to expectations, but collections are not so good. Button manufacturers are busy. Tobacco and cigars are quiet. Drugs are quiet. In the copper and brass goods trades business is not up to expectations. Copper is unsettled, and manufacturers do not care to purchase beyond their immediate wants. In hardware business has kept up well, but since July 1 collections have been slow. In the tin and enameled ware trades business has fallen off considerably. Demand is fairly good for American hemp twine. Firm conditions prevail in cotton cordage, and in some lines prices have advanced ½ cent per pound. Prices are firm in cotton duck and demand is good. In the pig-iron market consumers are making as few purchases as possible and are holding off for lower prices. Structural steel makers continue to report a good volume of business, but collections are not up to the standard. Pig-tin prices are lower and some

business is being done at the new level. Machinery sales for the past week have not been so large, and collections are slow. Generally speaking, all classes of lumber and building are slow, but in stock used for the construction of small houses in the suburban districts, demand is fairly brisk. In the brick market prices are down and burners slack. In these lines collections are slow, and renewal of paper is frequent.

The following telegrams show trade conditions at the cities mentioned for the week ending August 23:

BOSTON.—Dry goods for fall are being delivered to retailers in large quantities, and there is general expectation of a good volume of business to follow, notwithstanding the high level of prices of all textile fabrics and the disturbances in the money market. Disposition is growing, however, among buyers to operate with caution, in view of high prices and fear of a check to trade resulting. In some lines of cotton goods advances are expected to be announced by mills. Sheetings, tickings, ginghams and staple prints are strong, and all linens and white goods are very firm. Dress goods are in good demand. Men's-wear woolens are in light demand, worsteds still being generally wanted. Men's clothing and men's furnishings jobbers have had a large fall business on first orders and look for a very good season. Boston leather market reports an improvement in demand for seasonable lines. Grain leathers are somewhat weak. Splits hold their own. Shoe manufacturers are receiving some good orders, and the average manufacturer has plenty of business in hand for the present. A few are still short of orders, particularly in the cheaper grades. Trade in furniture lines is of fair volume and compares favorably with usual August business, but collections continue slow. Retail coal dealers are fairly busy filling orders for the winter season. In soft coal, stocks are low and prices high. Iron and metals show no material change, business being fair and prices firm. Western lumber is high in price, which accounts for slackness in orders. Eastern and western lumber remains about the same as last week. In painters' supplies, business is very good for this time of year. Grocery jobbers report payments generally slow, and there is a general disposition to watch credits carefully.

PROVIDENCE.—The cotton goods market is firm in demand and price. Worsted goods manufacturers report excellent trade. The manufacturing jewelry trade is in normal condition for this season, and the same state of affairs exists in lumber. Collections are good.

PORTLAND, ME.—Wholesale grocery and fruit dealers report good business. Summer hotels are well filled. Collections are good.

PHILADELPHIA.—Contracts having been made earlier in the season for this year's requirements and there being no buying for 1908, the general quietness continues in iron. The premiums that were obtained for early deliveries have disappeared, and prices have receded $1 or more a ton. The consumption has fallen off somewhat, but stocks are not accumulating to any appreciable extent. There has been a slight advance in prices of bituminous coal, trade is fair and indications point to a stronger market, the higher grades having been contracted for being practically out of the market. In dry goods and notions, jobbing is fairly active and collections are prompt. Retail trade is quiet. Wool is not active; sales are moderate and prices firm. Chemicals and dyestuffs are very dull, business being only from hand to mouth, and nothing doing in future. Prices are steady, with a few minor exceptions. Paints and glass are moderately active at firm prices. Lumbermen report no material change in market conditions. Wholesalers are rather dull, but retailers claim to be busy, especially in building grades. Market conditions in leather remain unchanged. Hides and skins are still weak, with only fair demand. Prices are off, and a full supply is on hand of both long and short haired. Buyers are still out of the market. Goatskins continue weak on full supply. Leather shows no appreciable change, demand being fair, supply good, and prices showing no appreciable decline excepting where sales are invited, slight concessions being made in such instances. Boot and shoe dealers report a fair business, but the volume of trade is less than last season, with no material change in prices. Tobacco is firm. There is a fair activity in liquor, with prices higher, this being attributed to advances in the price of cooperage and rye.

PITTSBURGH.—The pig-iron market is exceptionally quiet, there being practically no transactions and but little inquiry for iron of any kind for any delivery, and none at all for 1908 delivery. Prices remain steady at present quotations, however. The demand upon furnaces for delivery on contracts already booked is very urgent. Finishing mills continue to be several months behind their orders, and at the present time there is considerable inquiry, but very little new business is coming forward. Specifications on old contracts are being received freely. The situation as regards both raw and finished materials is considered a waiting one, and while a good buying movement would naturally be expected in the near future, it cannot be predicted with any degree of certainty. Coke production is about normal and the demand heavy, with prices firm. Quotations for pig iron for spot delivery at the valley furnaces are as follows: Standard Bessemer, $22.50; chilled basic, $21; No. 2 foundry, $22, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.60, and foundry coke $3.25 to $3.50, at the ovens.

BUFFALO.—There are evidences locally of an increased caution in financial circles and of a tendency among investors to await developments before extending their interests. In wholesale and distributing lines trade seems fairly well sustained. Collections, however, are reported somewhat slower. Retail trade shows the usual seasonable quietness.

BALTIMORE.—"Merchants' Week" brought a great influx of buyers to this market, resulting in a large increase in orders, not so much because of large sales, but the number of buyers on from the south exceeded all previous years. They bought conservatively, owing to high prices prevailing, though fully 80 per cent. of the number spoke very encouragingly as to the crop outlook and general conditions in their section. Straw-hat manufacturers note an absence of the duplicate orders received in 1906, and local retailers in that line still have fair stocks on hand, due to the late beginning of the season. Retail dealers in clothing, shoes and men's furnishings report a fair summer business, with increased numbers of clearing sales in various lines. Fertilizer manufacturers report collections seasonable, with raw material prices advancing steadily and southern buyers making the market; demand is fairly good for the season. Spirits are fairly active, and the oil market is steady at the decline. Dealers in Havana and Sumatra tobacco look for higher prices. Buyers of seed leaf are cautious. Grocery jobbers report a fairly good business for the week, with out-of-town business better than local. Canned goods are active and the market is firm. There has been free buying of the New Jersey tomato crop by local packers, who, owing to the late arrival of the peninsula crop (in Maryland and Delaware), are endeavoring to lesson their chances of not being able to fill contracts already made. The peninsula crop is large (one of the best in years being expected), but owing to the large acreage due for ripening about the same period, there is some doubt as to the sufficiency of labor. The labor problem caused the price of small fruit to advance. The peninsula crop is from two to three weeks late in arriving. Brush and harness manufacturers report a very satisfactory volume of business. Paper business at wholesale is fair and prices well maintained, but collections are below the average. Crockery and woodenware conditions are unchanged, business being equal to 1906, with collections below normal. There seems to be a growing stringency in the local money market, and bankers are very slow in extending new accommodations, being unable to meet the requirements of older customers, let alone to comply with the increased out-of-town demands for money at 6 per cent. and a bonus.

CINCINNATI.—General business shows a little improvement. Jobbers say they have considerable inquiry and some buying from the country, which is fully equal to the trade at this time last year. Manufacturers, as a rule, are busy on orders. Builders claim to be handicapped in their operations by the effects of strikes in some of the leading lines of builders' supplies. There has been but little movement in this year's crop of wheat, as farmers manifest little desire to sell at present prices; moreover, other growing crops account for a part of the delay in marketing wheat. Corn and tobacco, under favorable growing conditions, are making good progress. From central Kentucky and middle Ohio comes the news that a fair crop of "blue grass" and "red top" grass seed has been gathered, but that growers hold for a marked advance. Dealers in both kinds seem indisposed to meet the demands of the growers. Demand for money is exceedingly active, but lenders show a strong disposition to reduce the size of loans.

CHICAGO.—Improved trade conditions are reported in dry goods, clothing, shoes and lumber. Shipments of dry goods are increasing, and buyers appeared here in larger numbers and made purchases fully as heavy as last year. Consumption is large, and the manufacturing output in this district is heavy. The disposition is to go slow and not overload with supplies of goods or materials, owing to fears that orders may fall off, and with the extension of credits to the limit and the necessity of securing money through the floating of commercial paper, purchasers are not in shape to stand any reduction in demand or prices. New business in iron and steel is only fair, but the Illinois Steel Company has specifications for 400,000 tons. Orders for 40,000 tons of steel plates were recently booked. Coal is having a better sale, but unevenness prevails in prices. Groceries are in fair demand. Butter, eggs, potatoes and poultry have advanced. Live stock is lower, receipts larger. Money is strong, with banks not disposed to extend credits, and with country banks asking for more rediscounts and for shipments of currency for crop-moving purposes. Shipments of the latter show a good increase. Collections are fair. With temperatures down to an average of 30 degrees over the northern half of North Dakota, and 28 to 31 degrees over the Canadian northwest and 1 to 6 degrees of frost in that section Monday and Tuesday night, there has been injury to the spring-wheat and oats crops, but how much cannot now be determined, and will depend upon the stage of maturity of the crop. Harvesting is well under way as far north as the southern sections of North Dakota, but little of the Manitoba crop has been cut. Corn has made fair progress, considering the low temperatures this week. There is still an irregularity in the crop which will not be overcome, and there will be a fair percentage of the acreage that will never make corn. Some injury is reported owing to the silk being dried up by the hot winds that prevailed last Saturday and Sunday over a good part of Nebraska and western Iowa. Elsewhere the crop is promising. There is no change in reports of yields of winter wheat. Harvesting and threshing of oats was interfered with in Iowa and Illinois by heavy rains, which reduced the quality. Threshing has been delayed, and farmers want 40 cents for their crop in Illinois even though it is the poorest in quality in recent years. The hay crop is larger than usual.

INDIANAPOLIS.—The weather has not been favorable for threshing, and not much has been done up to the present time. Such as has been done shows that the quality of the wheat varies from excellent to indifferent. Oats are undoubtedly of a poor quality and the yield is only fair. General trade conditions are dull.

ST. LOUIS.—Large delegations of merchants from Alabama, Mississippi, Arkansas, Texas and Indian Territory are in the city. Some are buying sparingly. This is accounted for by the heavy road orders placed during the early summer. In nearly all lines orders booked are in excess of 1906. Prices are firm. Groceries, drugs, paints and oils are active at steady prices. Lumber shows some improvement. Hardware and building material are in good demand at firm prices. Collections are good. Manufacturers of stoves and castings are very busy, and the volume of business is much in excess of 1906 at the same period. Tanners have enough orders now on hand to run several months. Good hides are scarce and high. Retail trade continues in fair volume on account of cut-rate clearance sales. Money is firm and in good demand. Crop conditions vary. Oats are short and of poor quality, much below the average. Hay is the best in years, both as to quantity and quality. Corn is progressing nicely, though cold weather during the past week retarded its growth somewhat, and plenty of hot weather is needed to mature the crop, which is large and of fine quality.

ST. JOSEPH.—The condition of corn in this territory is good. Prospects for the crop equal those of last year, except six counties in Kansas report 50 to 60 per cent. Oats and wheat have been considerably damaged by rain.

MILWAUKEE.—Retailers and jobbers report trade fairly satisfactory. Collections are somewhat tardy.

KANSAS CITY.—Trade in the leading jobbing lines, principally dry goods, millinery, hats and shoes, has been greatly stimulated during the past week by excursions of country merchants. House sales are ahead of previous meetings of this kind. Retail business is good. Collections are a trifle backward. Growing corn is still backward throughout Kansas. The crop in the eastern part of the state will show some gain over last year. Dry weather has had its effect in the extreme western portion.

SIOUX FALLS.—Except in the northeastern part of the state, grain is practically all cut and much is now in stack. Threshing reports are favorable as regards yield and quality. Light frost occurred on the night of the 20th, doing no damage. Corn is doing well, but it requires about three weeks of favorable weather.

SIOUX CITY.—Business is fair in all lines. Indications point to fair yields of all crops, and the higher prices being paid will make the value equal last year's. The weather is excellent.

DAVENPORT.—Collections are somewhat slow and a strong demand for money prevails. The weather has been favorable to corn, with the exception of one night, which was unusually cold for the season.

ST. PAUL.—Current business is quiet in most lines, but orders for future delivery are extremely large, and all lines are doing more business than last year. Collections are keeping up well, and for the season are exceeding expectations and are ahead of last year. Frosts in North Dakota have affected late wheat and flax to a considerable extent; the early varieties and other crops are out of danger. The grade and quality will be materially reduced, at least 20 per cent. The frost has visited streaks of territory and is not general. Flax had just begun to blossom in places affected. All garden truck was cut down, except potatoes. In Minnesota conditions are different. There have been light frosts but no damage, although hail affected some sections. Creamery interests have been greatly stimulated by the immense hay crop. The cereal harvest is general and everything will be cut in a few days. Yields will not be heavy.

MINNEAPOLIS.—Business is very satisfactory in all lines for the season, the volume exceeding what it usually is at this time. Collections are fair. Flour is quiet and production has been curtailed, pending the outcome of the new wheat crop. Lumber is quiet. While reports from various points tell of hail and windstorms and rust, they are isolated and not general. On the whole a good yield of all cereals is looked for, though the season is much later than last year.

OMAHA.—Jobbers in leading lines report trade in excess of a year ago. Demand for staples is excellent, and the outlook is very encouraging. Collections are only fair. Corn in some sections of the state is suffering for moisture. Wheat is turning out well, quality being excellent, and exceeding expectations in quantity.

LINCOLN.—Wholesalers report fair to good business. Retail trade is satisfactory. Collections are fair. The corn crop, which is slightly below the average, is looking well, but needs rain and warm weather.

CHARLESTON.—Wholesale trade continues good and jobbers are very busy filling their fall orders. Some difficulty is being experienced by dealers in dry goods and hats in obtaining goods from the factories, which are behind on deliveries, owing to the unprecedented demand for this class of goods. Cotton is in excellent condition and some picking is being done. Collections are seasonable.

RICHMOND.—The feature in trade is the increasing demand for money. Local bankers are taking care of their customers without any stress, but demands on them are greater than usual, mainly because of the difficulty that the strongest houses have in placing their paper through brokers in the north at this time. Jobbers of hats, shoes, clothing and all other lines of wearing apparel have made large deliveries, but are still receiving orders in fair volume from the smaller trade, and from nearby territory there is a moderate demand, which, with the marketing of tobacco and corn, will soon increase. In groceries, provisions and hardware, sales are of the volume usual at this season. Other lines are without special features. Retail trade has been stimulated to some extent by end-of-season reduction sales. Collections, while dull and in some lines backward, average about equal to other years at this period. The condition of the tobacco and cotton crops in Virginia and eastern North Carolina continues favorable.

SAVANNAH.—The cotton crop has been damaged from 10 to 15 per cent. by continued rains.

AUGUSTA.—Retail trade continues fair and wholesale is improving. Cotton continues in a healthy condition.

ATLANTA.—Trade in all lines is seasonably active. Collections are dragging and a decided tendency to scrutinize orders closely is apparent. Crop prospects are improving.

MACON.—Trade and collections are somewhat better. Another bank would help trade and is very much needed. Cold nights retard the growth of cotton.

JACKSONVILLE.—Trade has receded to low-water mark for the season. Collections continue slow. A good cotton crop seems assured. The yield of citrus fruits will be a little short of last year's.

BIRMINGHAM.—Pig iron is quiet. Trade in general is a little off, with only fair collections. Lumber continues inactive.

MOBILE.—The first bale of new cotton arrived in Mobile Wednesday.

MONTGOMERY.—Some improvement is noted in wholesale trade. Retail lines continue dull. Collections are poor. Dry, hot weather has prevailed throughout this district. Cotton appears to be in fine condition, and prospects are very encouraging for a large yield.

MEMPHIS.—Retail business is quiet. Wholesale trade is fair. Collections are slow. The first bale of new cotton was received Wednesday. Local showers benefited some sections and crops are doing well. Other sections need rain. With late frost an average crop is expected.

LITTLE ROCK.—Cotton continues to improve with favorable weather, and the outlook is encouraging. Early fall trade is opening up splendidly, but collections are still a little slow.

NEW ORLEANS.—Trade is seasonable and all crops are making good progress.

FORT WORTH.—Scattered rains, with heavy precipitation at some points, have relieved the long drought in the northern part of the state. Cotton has been suffering, and shedding is reported. Picking in some portions of the state has begun, but the crop is late. Trade is only fairly active and collections are slow, and some extensions are being asked for.

WACO.—Trade is satisfactory. Collections are slow. Continued dry weather is working a very great hardship on cotton, which will be very short. There is no great damage from insects.

SAN FRANCISCO.—The feature of the week has been the legal recognition of Mayor Taylor's appointment. Rehabilitation of municipal government will now proceed rapidly. Grape picking has commenced with promise of large crop and high prices. Collections are fair.

SPOKANE.—Building operations continue active. Demand for labor is strong. Wholesalers report a good demand for goods. Collections are fair.

TACOMA.—Trade conditions are good. Considerable building makes for a good demand for materials.

PORTLAND, ORE.—The suspension of a bank here with liabilities of over $2,000,000 has caused excitement but no particular alarm among business men. Trade continues active in all lines, and crops now being harvested make prospects encouraging.

TORONTO.—Despite the fact that the finishing touches are being put to fall trade, there is still some little movement in the way of sorting orders for summer goods. The season has kept up pretty well, and there is still a good demand for some lines. Fall and winter wholesale trade has been phenomenally large, and the buying has, to a surprising extent, confined itself to the better class lines. This and the confidence with which orders are being placed are excellent evidence that a good fall and winter season lies before the trade. Deliveries of fabrics continue slow, and prices are firm in all directions. Fall millinery trade is very heavy. Business is reported about one-third over that of last year. Indications point to a heavy business in furs during the coming season. Manufacturers of boots and shoes are busy turning out fall lines; orders are coming in well, and it is said stocks in retailers' hands are low. There is a good movement in groceries here. Canned goods hold firm in all lines. Salmon prices are expected to advance sharply on a short pack. Butter and cheese hold steady. The cattle trade is a little slow, with heavy receipts and prices easy in tone. Country trade is quiet, and will continue so until after the harvest. Collections are generally fair.

MONTREAL.—All lines of trade continue to move briskly here. Financially, the one thing of note has been the better tone noticeable in the stock market. Canadian securities have shown some buoyancy, and there has been a recovery from the low prices of last week. Wholesale trade continues to move well in all lines. Large shipments of dry goods are going out, and fall and winter business retains the cheerful outlook it has held for the past several weeks. In all lines of cloths and in cottons and linens, prices hold firm. Deliveries are still slow. Continued good weather has kept up a sorting trade in summer lines. It is reported, however, that stocks throughout the country are still fairly large. This factor seems to have but little effect upon the trade for fall. Reports regarding the outlook for the harvest are cheerful. In groceries there is now an excellent trade moving, and collections are generally fair to good. New pack asparagus is on the market. Prices of produce are generally steady to firm. There is a fairly good export trade in both butter and cheese. Hardware is moving briskly and all lines are firm. Metals and heavy goods are in excellent demand. All lines of manufacture are reported busily engaged. Boot and shoe factories are doing a good trade in both fall and winter lines.

VANCOUVER-VICTORIA.—An excellent business is moving in all lines of trade here. Wholesale stocks are moving briskly, and collections are fair to good from all districts. Values generally hold steady to firm. The outlook is for a very light salmon pack this year, and prices are bound to be high. In some districts the pack has been almost a complete failure. There is a good movement of wholesale lines to the interior, following the general activity in provincial industries.

WINNIPEG.—In most lines at wholesale trade is brisk. Stocks of fall dry goods are coming forward well, and the trade looks forward to a heavy business during the coming fall and winter. Values in nearly all lines are firm. The hardware trade has a slightly quieter tone. Prices hold steady. Groceries are moving well. Collections are still slow and money continues tight. The banks are exercising considerable caution in the matter of loans, and business men are inclined to complain that they are overcautious. In some districts farmers are beginning to harvest the grain, and with good weather this should be general before the end of the month.

Money Market.

With plentiful supplies of money on call and comparatively low rates for the same, renewals having generally been at 2½ per cent., the New York loan market has this week again exhibited a dearth of time funds and high quotations for what restricted amount was offered in that form. In fact, 7 per cent. has been the prevalent figure asked for six months' money, and higher rates have been spoken of in connection with loans based entirely on industrial collateral. Dealings in commercial paper were practically at a standstill, there being little or no buying demand, even though 6½ per cent. is quoted as the minimum rate. Demands for funds for the west and south, indicated by the movement of domestic exchange against New York, account in part for the conservatism of lenders, but the market is also affected by the continued unwillingness of foreign bankers to lend finance bills to the stock market. It is to be noted that the Bank of England did not advance its discount rate on Thursday and that the foreign financial position is described as improved. At the same time the money market witnessed the unexpected shipment of $1,100,000 gold to Germany this week, and it is generally felt that an increase of government deposits in the national banks is the chief reliance in case stringency becomes acute. The indicated actual loss of cash suffered by the banks this week is put at nearly $4,000,000, so that to-day's Clearing House statement is expected to be unfavorable.

Week.	*Call rate. H.*	*L.*	*Prev. 30-90 days. H.*	*L.*	*Time, 4-6 mos. H.*	*L.*	*Com. paper dble names. H.*	*L.*

Aug. 24, 1906	6	3 5	6	6	7	6	6½	6

New York Banks.

Liquidation in the stock market was the cause generally given for the reduction of $14,231,200 in the item of loans displayed in last Saturday's Clearing House statement. The cash items, in lieu of showing a small gain, as was indicated in the preliminary estimates, involved a decrease of $2,828,300 in the averages, so that the reduction in the deposits was $17,447,300, and the reserve required was accordingly $4,361,825 less than the week before. This resulted in an increase of $1,533,525 in the surplus reserve and made the showing technically a good one. The figures of the statement compare as follows with those of the preceding week:

	August 17	*August 10*	*Changes*
Loans	$1,096,222,100	$1,110,453,300	D. $14,231,200
Specie	203,988,300	206,346,700	D. 2,358,400
Legal tenders	70,170,100	70,640,000	D. 469,900
Deposits	*1,059,457,300	1,076,904,600	D. 17,447,300
Circulation	50,201,000	50,155,100	I. 46,700
Total reserve	274,158,400	276,986,700	D. 2,828,300

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending August 22 shows an aggregate of $2,576,606,000, as against $2,762,826,000 last week and $3,231,364,000 in the corresponding week last year. Canadian clearings for the week aggregate $87,057,000, as against $80,397,000 last week and $70,072,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	August 22	*Inc.*	*Dec.*	*August 15*

Foreign Exchange.

Decided strength developed in foreign exchange early in the week, when the rate for demand sterling advanced to 4 87.80@4.87.90, with corresponding firmness in other classes of bills. The feature of the market was the apparently general unwillingness of bankers to draw with any freedom. This attitude was accounted for by the reports of financial strain at Berlin and fear that the Bank of England's rate would be raised again on Thursday. The engagement of $1,100,000 gold for shipment to Germany seemed, nevertheless, to be one of the special transactions which cannot be accounted for on ordinary grounds, the position of exchange between Berlin and London at present not allowing any apparent profit upon the shipment. On Thursday the market had an easier tone on the announcement that the Bank of England's rate had been left unchanged at 4½ per cent., coupled with advices that financial conditions at Berlin were improving. Demand sterling, in fact, fell sharply to around 4.87.60, and on Friday additional weakness developed, the demand sterling rate falling as low as 4.87.30.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Aug. 17	*Aug.* 19	*Aug.* 20	*Aug.* 21	*Aug.* 22	*Aug.* 23
4.83½ @ 4.88	4.83½ @ 4.88	4.83½ @ 4.88	4.83½ @ 4.88	4.83½ @ 4.88	4.83½ @ 4.88

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.87.10 @ 4.87.25	4.87.40 @ 4.87.70	4.87.60 @ 4.87.75	4.87.70 @ 4.87.90	4.87.55 @ 4.87.70	4.87.30 @ 4.87.60

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.83.00 @ 4.83.00	4.83.00 @ 4.83.20	4.83.20 @ 4.83.30	4.83.40 @ 4.83.60	4.83.10 @ 4.83.30	4.82.80 @ 4.83.00

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88; commercial bills, 4.82@4.83½; francs, 5.20 less 3-64@5.16¼ less 3-32; reichsmarks, 94⅜@95 1-16 less 1-32.

The markets were fully prepared for an advance of the Bank of England's discount rate to 5 per cent., but, as stated above, no change was made when the directors met. The weekly statement was better than expected, showing an increase of £981,749 in gold, although the proportion of reserve to liability fell from 50 62 per cent. to 48.20 per cent., and the loans expanded by £3,640,000. In the London open market call money is 2½@2¾ per cent., and discount is easier at 4⅝@4⅞ per cent. The Bank of France this week showed a gain of 9,075,000 francs in gold, and its discounts increased 54,500,000 francs. Its discount rate is unchanged at 3½ per cent., the Paris market quotation being also 3½ per cent. At Berlin the official bank rate is still 5½ per cent. and the market for discount 4 13-16 per cent.

New York Securities Market.

At the beginning of the present week the stock market was mainly interested in the political phase of the situation, the chief subject of attention being the President's Provincetown speech and that of Secretary Taft at Columbus, Ohio. It could not be claimed that these deliverances might be construed as indicating a reversal or even a relaxation of the administration's policy toward railroads and corporations. The street, however, was seemingly determined to find something reassuring in Mr. Roosevelt's utterance, and the publication of his speech on last Tuesday was followed by a change for the better in the temper of the trading, the preceding disposition of prices to decline in an irregular way being replaced by a rather brisk covering movement among the shorts, and to all appearances by some renewed buying of a better quality than had lately been exhibited. In fact, the market, although the dealings became slow and limited in volume, nevertheless presented an air of cheerfulness, the expression most generally heard being that the worst effects of the anti-railroad movement had been seen and were overdiscounted by the low level of values for stocks. The renewed tone of strength was, in fact, retained fairly well in the later portion of the week up to Friday afternoon, when the news that the half-yearly dividend on Southern Railway preferred stock had been cut from 2½ to 1½ per cent. served as a signal for renewed short selling and a decline in prices throughout the list. Previous to this incident there were several other factors which would naturally be classed as bearish in their influence. Among them were the decided breaks in the securities of the Interborough-Metropolitan, Metropolitan Street Railway and Third Avenue companies, arising from the revelations being brought out at the hearing on the traction merger before the Public Service Commission. The reports which came out of possible defaults or complications for some of these properties and the consequent weakness of the traction group did not in this instance seem to have any special effect on the rest of the list. Nor was the market unsettled in any perceptible way by the unexpected engagement of $1,100,000 gold for shipment to Germany and the high rates which were quoted for foreign exchange, attended as the latter were by continued reports of an unfavorable financial position abroad, Berlin, it was stated, laboring under pressure which involved some danger to important interests. The local money market also has been decidedly firm, with a positive scarcity of call money, so that 7 per cent. was the prevalent rate for loans running beyond January 1. The abundance of money on call and the comparatively low rates at which the stock market can supply its immediate borrowing requirements is, of course, to be taken into account in this connection, as well as the expectation that the Treasury deposits in the banks will be augmented whenever there appears to be pressing necessity for such action, as may readily prove the case if the present indications of demands for money at the interior continue. The decision of the New York City authorities to raise the rate on the new municipal bonds to 4½ per cent., with the weakness of the 4 and 3½ per cent. issues, was regarded as an unfavorable influence in connection with bond investment, as it tends to create a higher income return basis for prime securities.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

Boston Shoe and Leather Market.

There is an improvement in the amount of business doing in the leather market. Splits are holding their own, but grain leathers are weak, and buyers are not paying as much as earlier in the year. Sole leathers are firm. Hides are not holding their own. Shoe manufacturers are receiving good orders now and business in sight is ample for the present, and an average good season seems assured. Even the cheap and heavy grade manufacturers have received good orders within the past week or two, and the outlook for them is very good. A few houses in this line report only about three-fourths normal amount of orders in hand, but the average concern is well supplied. Shipments of footwear again exceed those of the same week last year. The *Shoe and Leather Reporter's* figures are as follows: Last week, 98,979 cases; preceding week, 103,246; last year, 93,303; total for 1907, 3,123,795; total for 1906, 3,256,631; decrease, 132,836.

Wool Markets.

Wool is very quiet, with but small lots moving. Manufacturers are buying very conservatively on account of the condition of the money market, and are disinclined to incur new obligations at the present market for commercial bills; therefore there is very little speculative buying, and most of the wool moving is to supply urgent needs. Once in a while a lot of especially choice wool is bought for future needs, to prevent its being taken by some other party. Another cause of the quiet tone is the extreme slowness with which new wools are arriving and being opened, this making a limited selection offering. Staple and fine wools are very strong, with a moderate supply, with clothing wools selling fairly well, but not as freely as worsted wools. Recent sales have been largely in fine and fine staple territories and fleeces Foreign wools are extremely quiet, owing to the scarcity of desirable lots. Fine merinos are very scarce and crossbreds are neglected, most of the stocks being New Zealand crossbreds, which are not in demand. There is little interest in the coming London sales in September, as the wools suitable for this country will not be offered in any quantity. It is reported that the Australian clip will be very little, if any, larger than last season. A well-known domestic clip of fancy wool has been contracted for in the west for 1908 at 17½ cents, this being against 18½ cents paid this year by the same house, but nothing else has been done so far ahead. Sales in Boston for the week included Idaho, Montana and Wyoming, in the original bags, at 25@27 cents, staple Oregon at 23½@25 cents, Texas twelve months' at 26@27 cents, Texas eight months' at 23@24 cents, California scoured at 66@68 cents for northern and 64@65 cents for middle counties, fine unwashed delaine at 38½@39½ cents, unwashed Ohio at 32 cents, XX Ohio at 34½@35 cents, fine unwashed Ohio at 27 cents, fine unmerchantable at 30 cents, Ohio half blood at 34 cents, Michigan half blood at 32@33 cents, Ohio three-eighths at 33 cents, Michigan three-eighths blood at 32 cents, Ohio quarter blood at 31 cents and Michigan quarter blood at 30 cents.

GERMAN RAILROADS.

Consul-General Richard Guenther, of Frankfort, states that the federal railroad bureau of the German empire publishes the following statistics: "At the beginning of the year 1906 the total length of the standard-gauge railroads in Germany aggregated 34,124 English miles, an increase of 21.3 per cent. over the mileage length of ten years ago. The area of the German empire is 208,780 square miles, and it contains a population of 62,125,000. For every 100,000 inhabitants this would give 6.1 miles length of trackage. The receipts from passenger traffic for the year 1905 amounted to $163,773,750, exceeding by 63.4 per cent. those of the year 1895. The passenger and baggage traffic contributed 28.19 per cent. to the total receipts. There are four class rates for passengers. The first-class averaged but 4.07 per cent. of the passenger traffic; second-class, 20.62 per cent., and third and fourth class, 75.31 per cent. The average receipt from the passenger per kilometer (.6213 mile) was about .6 of a cent., a reduction of 11.6 per cent. as compared with that of 1895.

"The total receipts from freight amounted to $376,585,020, an increase of 56.5 per cent. over 1895. The receipts per ton of freight (2,204 pounds) per kilometer carriage were about 8 cents. Ninety-two per cent. of the standard-gauge railroad system is owned and operated by the governments of either the confederacy or the separate states; the balance is owned by private joint-stock companies. The net income on the invested capital of the German railroads averaged 6.4 per cent. per annum. There were 606,612 persons employed as workers and officials in the German railroad service in 1905. The total expenditure for salaries, wages, etc., paid them, including $12,278,420 devoted to institutions and contrivances for their benefit, totaled $209,618,500, an increase of 17 per cent. over the expenditure per person in 1895."

GARY, IND.

"The news that the United States Steel Corporation has decided to invest $45,000,000, in addition to the original appropriation of $75,000,000, in the construction of its model city, now rising on the southern shore of Lake Michigan, adds interest to the greatest experiment in city building in modern times," says the New York *Sun*. "The location of what its promoters claim is the coming steel capital of the world is less than half an hour's ride by rail from the metropolis of the west and is in Indiana, on the southeastern shore of Lake Michigan.

"On the site of what was little more than a year ago a waste of sand hillocks and dunes, and at the point where the sluggish stream called the Grand Calumet empties into the lake, the new industrial city, which has already made the desert looking lands which shade off into the prairies a scene of business activity, is rising, not slowly and as a process of growth in the usual fashion, but as rapidly as a force of 3,000 men, now being constantly added to, can build it. Originally planned to accommodate a population of 100,000, the plans have been expanded to a basis of 300,000, The tract of land in which the new industrial city is rapidly taking form is 6,000 acres in extent, with a lake frontage of more than six miles and with possibilities as to inland extension as boundless as the prairies themselves.

"Perhaps the preliminary work, most of which is already done, is the most interesting, as showing the rapidity of modern processes of city construction. The sand hills and hillocks which to voyagers on Lake Michigan once formed such a picturesque sight, looking on a summer's day with the sun shining on them like cumulus clouds on the horizon, have disappeared along that part of the lake. They have been leveled and the sand has been used to fill up the shallow beach, the swamps of Grand Calumet and lower lying lands elsewhere in the tract. The new city by this process and by dredging has attained an elevation of twenty-two feet above the level of Lake Michigan, and thus the work Chicago was compelled to do after its founding has been performed at Gary at its beginning. By dredging also a harbor has been formed, deep enough to admit the heaviest freighters of the Great Lakes bringing the iron ore from the Lake Superior region to the iron and steel mills which are the reasons for the city's existence.

"Naturally the mills and the thousands of men who will be required to man them have the first place in the plans of the builders. Everything has been subordinated to their convenience, health and comfort, and so far the plans are strictly severe and utilitarian, but the city has also been laid out with a view to architectural effect and beauty, with parks, promenades and all the usual appurtenances of modern city life.

"The river has been dredged to a uniform width of 250 feet, spanned by steel bridges for the accommodation of the four trunk lines of railway centering here to distribute the products of the mills once these are completed and in full operation. To avoid the constant tearing up of streets for gas, water and electric mains and conduits, which is the bane of older cities, which grew and were not planned and built, all pipes and mains in Gary are laid in the alleys, each at a certain level, thereby avoiding the confusion worse confounded in cities where pipe laying is a matter of emergency and suggests a mighty maze without a plan. In Gary everything is planned and everything bears the stamp of to-day. Nothing is left unprovided that experience has shown to be requisite in a model twentieth century city. It even has a Broadway three miles long, with concrete sidewalks and with two miles on each side of business blocks. The coming steel capital is not to be altogether devoted to business, but will have parks, playgrounds, theaters and opera houses. These, however, will naturally come later, though when they do come they will fit harmoniously into the general plan.

"Gary is not to be another Pullman, but a city which has had the benefit of that notable experiment and consequently an improvement upon it."

SEASON'S ORE REQUIREMENTS.

The *Iron Trade Review* says: "Naturally there has been much discussion in ore and iron circles as to the effects of the dock strike upon the supply of ore to furnaces. The position and temperament of the individual seems to have exercised more influence upon his conclusion than the facts of the case, which are of a statistical nature, and, therefore, should not afford room for very widely variant conclusions.

"The statistics of ore on Lake Erie docks on December 1 and May 1 last showed practically no change from the previous year. While there are no statistics of stocks in furnace yards, there is no particular reason for assuming that these stocks have changed materially. Season shipments may then with propriety be compared with pig-iron production, past and prospective, in an effort to determine the probable ore needs.

"Considering the stocks carried at various points, the ore shipments of a season may properly be compared with the pig-iron production of the twelvemonth from July 1 to July 1. The production of pig iron in the second half of last year was 12,724,941 tons, and that in the first half of this year was 13,478,044 tons, making a total for the twelvemonth of 26,202,985 tons. The shipments of Lake Superior ore last season, by lake and all-rail routes, were 38,522,139 gross tons.

"There is so little change in pig-iron production in districts outside those tributary to Lake Superior ores that it is safe to proceed on the basis that ore shipments this year should increase by the amount which the country's pig-iron production is likely to increase, in order to maintain the status quo, but these shipments must be in terms of iron units, so that the statistical tonnage must be increased proportionately to decrease in iron content. The decrease may be estimated roughly at 1 per cent., and on an average iron content, natural, of about 50 per cent., this means an increase in tonnage of about 2 per cent. To make 26,200,000 tons of pig iron in the twelvemonth beginning July 1, 1907, there would have to be brought down this season about 39,250,000 tons of ore, as ores go this season."

PRINTING AND PUBLISHING.

According to the census the total number of establishments in the printing industry in 1905 was 26,422, a number larger than was reported for any other industry. The increase reported from 1900 to 1905 forms a striking exception to the prevailing tendency toward consolidation, for it was proportionately greater than from 1890 to 1900. The capital required in 1905 to conduct the business was $385,008,604, approximately double that required in 1890, doubtless due to a considerable degree to mechanical changes which have taken place in this industry during the past ten or fifteen years. The total value of products reported in 1905 was $496,061,357. From 1900 to 1905 the increase in value of products was nearly double that from 1890 to 1900, or, in absolute figures, $149,006,927 compared with $71,601,915.

Among the ten industries having value of products in 1905 exceeding $320,000,000, printing and

publishing ranked seventh, having advanced to that position from tenth in 1880. The ten leading industries were as follows: Slaughtering and meat packing, iron and steel foundries and machine shops, flour and grist mills, clothing, lumber and timber, printing and publishing, cotton manufactures, woolen manufactures, and boots and shoes. Printing and publishing reports one establishment to every 3,076 inhabitants, while at the opposite extreme is iron and steel, which contributes but one establishment to every 134,000 inhabitants.

Of the total number of establishments in the entire industry, about one-third were exclusively book and job establishments, one-sixth exclusively newspaper and periodical establishments, and over one-half were combination establishments—that is, producing both book and job printing and newspapers and periodicals. In value of products the exclusive establishments were practically on even terms, the amount reported for book and job printing being $186,759,503 and for newspapers and periodicals, $184,736,800; but in the combination establishments the value of newspaper and periodical products greatly outweighed the value of book and job printing. The entire value of products distributed between the two general classes was $233,230,842 for book and job printing and $256,816,282 for newspapers and periodicals. The increase for newspapers and periodicals from 1900 to 1905 was somewhat greater than that shown for book and job printing. This was principally due to the stationary condition of the book and job printing interests in the New England states. Two-thirds of the total value of products of the industry was contributed by six states—New York, Pennsylvania, Illinois, Massachusetts, Ohio and Missouri. These states are also the principal producers in each of the two branches, although in unequal proportions.

The absolute increase in value of book and job products during the five-year period was unprecedented. From 1880 to 1890 it was approximately $4,500,000; from 1890 to 1900, $28,000,000; and during the half decade from 1900 to 1905 $62,000,000. There are many new requirements for miscellaneous printing. The transfer system, for example, requiring more than 3,000,000,000 transfer slips annually for the trolley systems of the United States, represents approximately 30,000,000 printed sheets of paper.

The telephone, now extended to all parts of the United States, depends upon the subscribers' book, which is an indispensable adjunct of each instrument. Of these books the three cities having more than 1,000,000 inhabitants—New York, Chicago and Philadelphia—required approximately 1,400,000 copies in 1905, containing more than 2,500,000 pounds of paper, and requiring presswork aggregating nearly 42,000,000 impressions, equivalent to the work of one cylinder press turning out 10,000 impressions per day for fourteen years of working days.

The value of products of newspapers and periodicals arises from two sources of income—subscriptions and sales and advertising. At the census of 1880 the assets derived from subscriptions and sales exceeded those from advertising by almost $11,000,000, or approximately one-fourth. In 1890 the products of both branches were of almost equal value, subscriptions and sales, however, being greater by $1,000,000. At the census of 1900 advertising took the lead, with an excess of nearly $16,000,000. Since 1900 this lead has been further increased and in 1905 amounted to nearly $34,000,000. It is probable that this change in relative positions of these two classes of assets did not result from failure on the part of receipts from sales to advance generously in amount, but from the much more rapid increase in receipts from advertising; the former more than doubled from 1880 to 1905, but the latter much more than tripled. In 1880 the total value of advertising was equivalent to the expenditure of 78 cents per capita; in 1890, $1.13; in 1900, $1.26, and in 1905, $1.79, on the basis of estimated population June 1, 1904. The per capita value of advertising thus more than doubled from 1880 to 1905. On the other hand, the per capita value of subscriptions and sales increased much less rapidly, rising from 99 cents in 1880 to $1 37 in 1905.

The increase in value of sales in the five years from 1900 to 1905 was so great by comparison that the increase in the previous ten-year period appears insignificant. But eight states show a percentage of increase for the period from 1890 to 1900 equal to or exceeding that for the entire United States from 1900 to 1905. In 1900, with the exception of Idaho and Montana, no state reported as great an increase as 50 per cent. Yet during the half decade covered by this report fifteen states reached or exceeded 50 per cent. increase.

Ten states reported for the decade from 1890 to 1900 an increase in value of advertising greater than 50 per cent., but so great had this branch of the industry become in 1905 that thirty-four states reported for the five-year period an increase in excess of 50 per cent. The increase, indeed, for the entire United States upon a decade basis was more than double that reported for the previous period.

In 1905 the establishments devoted exclusively to the production of newspapers and periodicals were presented separately for the first time. They formed 26.6 per cent. of all newspaper and periodical establishments, and contributed 60.6 per cent. of the total newspaper and periodical product. The north Atlantic states contributed approximately one-third of the total number of establishments reported, and more than one-half of the weight of paper used and value of products shown, both for advertising, subscriptions and sales.

No increase in the industry has been more striking than that reported for the number of pounds of paper used. Of the total amount of paper manufactured in 1905, more than 900,000 tons were used solely for newspapers and periodicals, representing almost one-third of the entire output of the paper mills of the United States. To make this paper required the services of nearly 15,000 men, and represented approximately $9,000,000 in wages. These mills used as raw material 1,300,000 cords of spruce, poplar and hemlock logs, representing the timber product of approximately 100,000 acres, exclusive of the logs imported from Canada. Thus every working day in the year, the forests of New England and the middle states, with scattered areas elsewhere in the north and northwest, yielded approximately 1,765,000 feet of timber to be transformed into the newspapers and magazines required to supply the people of the United States.

During the twenty-five years from 1880 to 1905 the number of newspapers and periodicals of all classes in the United States practically doubled. Of the 10,000 publications thus added, one-third was contributed by each of the first two decades and the remaining one-third by the half decade from 1900 to 1905. The increase in number of publications, therefore, was twice as rapid during the last five-year period as during the two previous decades.

The changes in the proportions of morning and evening newspapers were much less rapid during the five years from 1900 to 1905 than during the previous decade. Morning newspapers increased 7.1 per cent. in number and evening newspapers 11.3 per cent., as compared with 6 4 per cent. and 55.2 per cent. during the previous decade. Thus, while the evening newspapers continued to increase in number somewhat faster than the morning papers, the excess of the increase of the former over the latter was but 1,178 in 1905, as compared with 1,036 in 1900.

If the various newspapers and periodicals be divided into six general classes—news, religion, trade, agriculture, science and education, and miscellaneous—it appears that practically four-fifths of the entire number are found in the first class, 6 per cent. are devoted to religion, 4.6 per cent. to trade, the small remaining number being divided among the other classes.

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY.

Henry E. Dunn, President; Charles L. Beckwith, Secretary; Charles M. Clark, Treasurer.

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 31, 1907.

Complaints of the overabundance of legislation are by no means new, but once in a while the situation, as viewed by those in a position to realize the immensity of the flood of enactments put forth from year to year, becomes so acute as to call for special and emphatic mention. In his address at Portland this week, ex-Judge Alton B. Parker, of New York, whose duties as president of the American Bar Association required him to make a survey of the year's legislation, lamented a condition of affairs which permitted of laws being ground out from a legislative hopper at the rate of five hundred a month, as has been done in more than one state this year. He remarked upon the need of giving more attention to statute making, with the view not of having more laws, but of having laws of a better quality. Some method will, he said, have to be adopted for determining the necessity and efficacy of proposed statutes before they are enacted, if our statute law is to be developed with wisdom and caution. In a thoughtful address by Governor Hughes, of New York, that official, who has had his share of experience with the activity of legislators, laid stress upon the importance of not always looking to the state capital for the solution of matters of government and administration, but of securing the needed measures where possible through the action of local governing bodies. The doctrine enunciated by the governor is a sound one. There should be less asked of the legislators for the states, and as a result they would have less temptation to over-activity and would have more time to consider the legislation they enact. Less legislation of a sweeping kind and more careful consideration of whatever kind are among the pressing needs of the day in this country.

Indications of unrest in Central America have not been wanting of late; indeed, they have been so persistent as to lead to the expectation that an outbreak of hostilities might occur at any time. Naturally, they have not been overlooked by President Roosevelt, whose willingness to exercise his good offices in that part of the western hemisphere so close to the United States geographically has been well understood. After consultation with President Diaz, of Mexico, whose interest in the situation is also well known, Mr. Roosevelt on Wednesday addressed to the presidents of the several Central American states a telegram expressing his regret at the receipt of information indicating the imminence of a disturbance of the peace of that section and his desire to coöperate with President Diaz in lending friendly influence in the cause of peace and humanity. Referring to the fact that a conference has been suggested between representatives of the republics of Central America, he cordially tenders the good offices of the United States toward bringing about so beneficial a result, and appeals to the executives to aid in the realization of his friendly purpose by refraining from any action tending to increase the dangers of the situation, pending a further resort to the peaceful methods of diplomacy. The action of the President seems to have commended itself highly to the Central American rulers, whose representatives at Washington do not hesitate to predict the success of Mr. Roosevelt's efforts.

Advices from the Panama canal indicate that, as intimated in the report of Colonel Goethals, referred to recently, the work on the canal is being pushed at a rate not approached heretofore. Despite a reduction in the force of employees during July, all records for excavation were broken during that month. The work accomplished in the Culebra division was nearly five times as great as in the corresponding month last year. There has also been an improvement in sanitary conditions, the figures for July showing a reduction of nearly 50 per cent. in the mortality rate as compared with last year. Under the circumstances it is not surprising to learn that the President has approved Colonel Goethals's request to be allowed to continue expenditures in excess of the pro rata monthly allowance for the current fiscal year.

For the third time the Venezuelan government has rejected the proposition of the United States to submit to arbitration five American claims against the South American republic. The rejection of the proposal is based upon the ground that the claims are not matters for diplomatic intervention. The course to be pursued by the State Department in reference to the matter has not yet been determined, and for several reasons it is possible that the President may decide to submit the question as to what should be done to Congress when it meets in December. The attitude of the Venezuelan government would seem to indicate that further efforts of diplomacy to bring about a settlement of the matters in controversy would be resultless. Meanwhile, it will be noticed, a very heavy fine has been imposed by a Venezuelan court of first instance upon one of the companies whose claims have been the subject of diplomatic communications. This company, which was tried for complicity in a revolution headed by General Matos a few years ago, was condemned to pay not only the sum of $5,000,000, the estimated cost of putting down the revolution, but other sums fixed by a commission which will amount in the aggregate to about $10,000,000. These developments form features in the situation which will no doubt receive careful attention when the matter is finally considered at Washington.

Judging from the cable advices, the agreement to submit the Newfoundland fisheries question to arbitration at The Hague has not aroused any special antagonism in England; that is, making due allowance for the comments of the opposition press. It is reported that the officials having to do with foreign relations are confident that a satisfactory arrangement covering the present season will shortly be concluded. Indeed, so confident are the Washington authorities of such an outcome that the State Department on Monday decided to allow the fishing smacks which have been lying at Gloucester, Mass., awaiting the conclusion of the agreement, to proceed to the fishing grounds. This action seemed to be warranted by the condition of the negotiations at London. Professor Alexander, of the Fisheries Commission, has been directed to proceed to the fishing grounds and to remain there during the season as adviser to the fishermen, informing them as to the exact extent of their rights on the fishing grounds and counseling them against any action that might be likely to lead to friction with the colonial authorities.

In a decision announced on Tuesday, Judge Pritchard of the United States Circuit Court at Asheville reaffirms the jurisdiction of his court in the matter of issuing injunctions against state officials during the recent railroad-rate controversy. He holds that the suits were not against the state within the meaning of the eleventh amendment to the Constitution, which provides that the jurisdiction of the United States courts shall not extend to any suit against a state by citizens of another state. Judge Pritchard declares that a state cannot so frame an act as to deprive a citizen of a right vouchsafed to him by the Federal Constitution or to deprive the federal courts of jurisdiction, and that the sooner these questions are definitely determined the better it will be for all parties concerned. In his view, the eleventh amendent to the Constitution being a part of that document must be so construed as to give full force and effect to every provison of the instrument of which it forms a part.

Owing to the opposition expressed by the Brazilian representatives to the plan of allotting the judges of the proposed International High Court of Justice, a modified proposition has been submitted by the United States delegates. Under the new plan it is proposed that all the countries of the American continent, including the United States, twenty-one in number, shall be entitled to have four judges appointed on the understanding, arrived at through diplomatic channels, that the whole number of judges will be reduced to fifteen, two being allotted to Asia and nine to Europe. How this new proposition will fare when it comes up for definite action remains to be seen. The final adjournment of the Peace Conference cannot now be long delayed. The delegates are, according to report, somewhat wearied of their work, which has involved the toilsome labor, often without result, of endeavoring to reconcile widely divergent interests.

Copyright legislation was the subject of one of the reports laid before the American Bar Association this week, in which the general features of two bills now before Congress were commended. These features embody a broadening of the subject of copyright so as to include all classes of works which can be comprised within the constitutional term "writings of an author"; the recognition of a right of property in all the works of an author before as well as after publication, provided a notice of claim of copyright is impressed upon or attached to the work at the time of publication; the shortening and simplification of the notice required by statute; the consolidation, simplification and expansion of the remedies provided for infringement of copyright, and the enlargement of the rights of aliens to the extent that any person resident in any part of the world may obtain American copyright by first, or contemporaneously with its first publication in a foreign country, publishing his work within the limits of the United States. While there are minor differences between the two bills referred to, the features embodied in both make up a comprehensive scheme of legislation, and the enactment of either would constitute a step in advance.

RELIEF FROM THE TREASURY.

In the amount of support which the present head of the United States Treasury Department proposes to extend to the money markets of the country during the crop-moving season, the anticipations of the banking community are exceeded. Moreover, the manner in which such aid is to be afforded during the critical period of the financial year involves a departure from former precedents which is justly made the subject of much favorable comment. It will not escape attention that the action of the Secretary is strongly approved as wise and timely by Comptroller of the Currency Ridgely, who particularly commends the early announcement of the Treasury's purpose. Mr. Cortelyou, it is to be observed, has not waited, as has been the wont of most of his predecessors, until the money market was actually experiencing severe stringency, but framed and announced a programme sufficiently far in advance of the possibility of such a development as to remove the element of uncertainty about the action of the Treasury, which in previous instances was one of the most unsettling influences. Besides this, his hands are now untied in regard to depositing customs receipts, as well as the funds derived from internal revenues, in the national bank depositories, while the condition of the Treasury is so satisfactory that he has at his command fully $50,000,000 which can be restored to the use of commerce without in any way interfering with the maintenance of an adequate working balance. The Secretary exhibits an appreciation of the fact that it is on the larger eastern financial centers, like New York and Boston, that the west and south depend for actual aid in financing the crops, beyond the drawing in of the deposits which the interior institutions keep with the eastern banks, the policy, as announced, being to make the most substantial additions to the government bank deposits with institutions at New York and other cities on the seaboard. Finally, it is proposed to draw on these deposits from time to time just as if the government were a depositor in the ordinary sense. In short, Mr. Cortelyou's intention seems to be to make use of all the power at his command under existing legislation to remedy the tendency of the Sub-Treasury system to withhold money from circulation at the time when it is most urgently needed in the country's business.

It is also stated that there would be little delay in putting the plan into practical effect. Following a visit by two of the assistant secretaries of the Treasury to New York, where they conferred with leading bank officials, it was reported that the increase of the deposits would begin forthwith; that not less than $5,000,000 per week would be placed with the banks, and that this would probably continue until the middle of October, though some uncertainty exists as to whether the arrangements to that end have been actually completed as yet. Though not positively urgent, the necessity of some action of this kind was fully apparent. That the New York banks are now above their legal reserve limit is due in a large measure to the fact that there has been an extensive liquidation in the stock market, together with the transfer of some borrowings in that quarter from the banks to foreign bankers. At the same time the European markets are themselves strained and offer opposition to the withdrawal of money to the United States. In fact, as has been already pointed out, the assistance which the money market can receive from abroad this year is likely to be far smaller in amount than is usual in the autumn. Moreover, with commercial paper and time loans ruling at 6½@7 per cent. at New York, and with banks, as they have in some instances done, showing an absolute inability or unwillingness to put out money in that form, there was every reason and, in fact, a strong obligation resting on the Treasury Department to act in the premises. This Mr. Cortelyou has started to perform in what seems to be a prompt and practical way.

POLITICAL CONSERVATISM AMONG THE LAWYERS.

Speaking generally, lawyers are as a class conservative in their attitude toward public questions, and their instinct of conservatism is not lost when they discuss those questions in professional gatherings. It is not strange, therefore, that something in the nature of a reaction against a present strong tendency toward centralization in government should find noteworthy expression in the proceedings of the American Bar Association, which met at Portland, Me., on Monday. The presidential address was delivered by Mr. Alton B. Parker, who was formerly chief judge of the New York Court of Appeals, and more lately the candidate of a national party for the presidency. While disclaiming any purpose to discuss the merits of the various claims that have been made for an increase of the federal power at the expense of the states, Judge Parker still took occasion to say that the attempts "on the part of the federal government to despoil the states of the powers and functions belonging to them will not tend to smoothness in the working of our dual scheme of government."

To some of the suggestions for increased federal control Judge Parker made specific reference. For example, "the claim for federal control has been made by representatives of insurance interests as a measure of relief from state supervision, and by certain railroad officials for practically the same reason. So officials and others have suggested various schemes having for their object the bringing of railroads, other corporations and interests under the exclusive control of the federal government. To that end national incorporation has been proposed, as has also a federal license system, the plan of the latter being to prohibit common carriers and others interested in commerce from participating in interstate commerce without a license, the license to issue only upon an agreement to obey all federal requirements. Another contention of far-reaching import is that the power of Congress to regulate commerce, which has been held to include the right to regulate the instrumentalities through which interstate commerce is conducted, involves the power to regulate the production of articles which may or may not be destined to enter later into interstate commerce." The speaker clearly indicated his lack of sympathy with those proposals, and as regarded the last mentioned proposition, answered it unhesitatingly in the negative.

That the spirit which thus found expression in the presidential address was shared by many of the members was indicated in the action taken upon the report of the committee on insurance, which was regarded as one of the most important laid before the gathering. That report embodied the following recommendations, viz:

(1) Disapproving and condemning "the prevalent custom which makes the state insurance commissionerships political prizes to be distributed as such without regard to fitness or knowledge of the insurance business."

(2) Requiring all companies created under the laws of foreign countries to make a deposit in at least one of the states before transacting business anywhere in the United States.

(3) The repeal of the valued policy laws.

(4) The creation in each state of the office of fire marshal.

(5) The enactment of a federal statute forbidding the use of the mails to persons, associations, copartnerships or corporations conducting any kind of insurance business in the United States that are not licensed to transact such business by the state wherein such persons, associations, copartnerships or corporations are domiciled, or under whose laws any such corporations are created.

(6) The apportionment and contingent distribution of the deferred dividend surplus on existing life policies of all companies as a condition precedent to the transaction of business outside of the home states of the several companies.

The disposition made of these recommendations was significant. The first four were at the outset adopted without change. Subsequently the opening recommendation was reconsidered and amended so as to read that "this association disapproves and condemns the treatment of state insurance commissionerships as political prizes without regard to fitness or knowledge of the insurance business," thus excising the implication that such treatment is a "prevalent custom."

The sixth proposal was vigorously antagonized, one speaker declaring that if such a law should be enacted by the states and complied with by the companies there would not be an insurance company in the United States that, on the face of its statement, would not be bankrupt. This proposal was laid on the table by a substantial majority. The fifth proposal, suggesting the enactment of a federal statute forbidding the use of the mails to persons or corporations not licensed by the state where they are domiciled, or under whose laws they are created, was, after a spirited debate, defeated. As had been heretofore intimated in these columns, even the indirect method of federal supervision recommended by the committee did not commend itself to the majority of the association, who were not unmindful of the possible legal difficulties in the way.

THE NEW YORK BOND ISSUE.

General approval from financial interests has greeted the decision of the New York City authorities to offer for sale on September 10 $40,000,000 of 4½ per cent. bonds. In fact, the announcement was regarded in the light of a bullish factor in the securities market, since it was followed by more or less definite reports that a powerful syndicate of bankers may be formed to bid for the bonds, a development of the latter sort being considered as indicative of a return of confidence on the part of the leaders of the investment world. It is, however, a little early to make predictions as to whether the subscription for the new issue will take such a form, or whether, as has also been intimated, the prospective syndicate will be successful in placing a portion of it abroad, the Paris market being pointed to as affording the best chances for securing the coöperation of European capital in the operation. There does not seem at this writing to be much doubt felt that the entire amount will be absorbed, the prevalent impression, indeed, being that most if not all of the bonds will command a slight premium.

There has naturally been some little criticism of the action of the municipal administration in putting out such a large block, and in some quarters it has been suggested that it would have been better to have limited the offering at this time to a small sum, to be followed by further successive emissions. On the other hand, it is pointed out that the city by this step will secure not only the funds required to meet its pressing bills for improvements already completed or in progress, but will probably not find it necessary to reënter the investment market until next spring. Furthermore, in making the rate on the bonds 4½ per cent., the city apparently obviates any chance that the loan may be a failure, and, in fact, adjusts its terms of borrowing to the actual condition of the investment market. It must be considered that the non-success of New York City in placing any considerable amount of the 4 per cents, either by public subscription or private sale, was not due to anything concerning its credit. The chief controlling factor in the entire matter was that under existing money and bond market conditions a 4 per cent. bond at par was not attractive to investors, while New York is not singular in being unable to borrow on such terms, as witness the fate of recent offerings of municipal bonds at that rate by Boston and other communities.

It is, of course, to be regretted that under the existing statutes the city could not create short-term obligations which could be retired with the proceeds of long-period bonds bearing a lower rate of interest than 4½ per cent., and which could undoubtedly be placed with readiness whenever the market conditions were once more normal. It is, however, announced that application will be made to the next legislature of the state of New York for legislation covering this point. As it is, the $40,000,000 now offered consists of $35,000,000 corporate stock maturing in 1957, and $5,000,000 maturing in 1917. The general impression, however, is that this will be the last issue the city will make bearing such a rate as 4½ per cent., at least so far as long-term bonds are concerned, and this presumed fact seems to add to the favor with which the new bonds are regarded in investment circles, and will, in all likelihood, have its effect in swelling the amount of bids.

A natural consequence of the raising of the rate of interest by the city, though probably a temporary one, has been to depress the market prices for the old city

3½ and 4 per cents, there having been decided declines in them. The quotations for those bonds have, as a matter of course, tended to approximate to a 4½ per cent. income yield as a reflection of the rate the new bonds are to bear.

THE FUTURE OF THE INTERSTATE COMMERCE COMMISSION.

One of the most interesting papers read before the American Bar Association at Portland, Me., this week was that contributed by Mr. Charles A. Prouty, of the Federal Interstate Commerce Commission, which was read before the association by Judge William H. Staake, of Philadelphia. It was declared in this paper that the most important social question before the country to-day is the regulation of its railways; that for the last two years it has been the foremost political issue, and that it will probably occupy that place until settled. The railways have come to be the principal means of physical communication and have come to take the place of public highways. But, Mr. Prouty says, these highways, while public in use, are private in ownership, and the capital invested in them has been put there upon the understanding that it shall be allowed to earn a return, and while the government must protect the citizen in the use of these avenues of transportation, it must also protect the individual in the enjoyment of his property. This much is obvious to all. What is not always so clearly apprehended, the commissioner continues, is the danger of deterring capital from seeking this form of investment in the future. If the demands upon the railways are to be met, enormous sums must be expended in extensions and improvements, and these expenditures cannot be made out of earnings, but must come largely from new money drawn from the investing public. Every system of regulation, therefore, should assure capital of just treatment.

Attention is directed by Mr. Prouty to the fact that under the present law the commission is charged with two sets of duties requiring diverse qualifications for their discharge. In the first place it stands as the representative of the government to take care that the highways over which it has jurisdiction are in fact public, to enforce the provisions of the Interstate Commerce law, and to see that rates are reasonable and just; that the practices and regulations of railways are not oppressive, and that the penalties provided by the act are enforced. In the near future, in his view, its powers must be extended to the operation of the railways as well. These duties are largely executive and can best be discharged by a single head responsible to the executive and answerable to the spur of popular criticism. In the second place the commission is a judicial tribunal which hears and decides complaints. The qualifications of such a body are the exact opposite of the other. Its membership should be numerous, so that its decisions may be the resultant of the action of independent minds; it should be entirely withdrawn from all political and personal influences, and it should have time for the deliberate consideration of the matters coming before it.

Regarding these divergent functions of the Interstate Commerce Commission, Mr. Prouty suggests that while the orders of that body were unimportant and subject to review in the courts, the union of these functions may have been well enough, but that a different question is presented with the extension of its jurisdiction and of its power of final action. That practical situation has, he says, now arisen. The jurisdiction of the commission has been enormously increased, and its decision with respect to most of the matters which it hears is, in his opinion, practically final. He feels, therefore, that under existing conditions the duties of the commission should be separated. His opinion seems to be that the same body cannot long properly discharge both the functions mentioned, and that, in fact, the time has come when the commission should be relieved of all its duties except the hearing and deciding of complaints, while its executive functions might be transferred to a bureau in some department, or preferably to a newly created department, which from the first would have occupation in plenty. This suggestion from a thoughtful member of the commission seems deserving of attention. It might not be necessary to create a department to look after the executive work. That might be devolved upon a commissioner in one of the departments, say that of Commerce, but its successful performance would call for the employment of a man of unusual caliber; such a one, indeed, as would fill acceptably a Cabinet post.

RAILROAD DIVIDEND DEVELOPMENTS.

Within a week some notable incidents have occurred in connection with the dividend payments on the stocks of prominent railroad corporations. The announcement that the Southern Railway Company had cut down the semi-annual rate on its $60,000,000 of preferred stock from 2½ per cent. to 1½ per cent. was not unexpected. In fact, the preliminary statement of the company's earnings for the fiscal year ending June 30 would have tended to create the impression that conservatism demanded a cessation of such payments for the time being. The management, indeed, states explicitly, in announcing the decision in the matter, that the dividend is to be paid out of accumulated surplus, the income account showing that after the disbursement of the April dividend of 2½ per cent. on the preferred shares, amounting to $1,500,000, there was a balance of only $790,321, so that the dividend for the last six months of the fiscal year was only earned to the extent of about one-half. The statement issued in connection with the declaration also calls attention to the fact that while the system exhibited a satisfactory gain in its gross earnings, amounting to $3,016,555, or 5.6 per cent., the operating cost was $4,926,000, or 12 per cent. greater, and the net earnings $1,909,000, or 13¾ per cent. smaller. The swelling of the operating expenses is described as a reflection of abnormal and extraordinary conditions which may not be reasonably expected to recur, and which are due to the existence of high prices for supplies, material and labor. This, in connection with increased taxes and legislative reduction of revenues, certainly made it the part of conservatism to limit the distribution of the company's profits, at least until the permanent effect of such conditions could be measured. At the same time the action of the Southern Railway management has aroused not a little adverse comment. It is queried, for instance, why, on such a showing as is indicated above, it would not have been the better course to suspend dividends altogether, and to proclaim the policy of devoting surplus earnings entirely to improvements and betterments, which are so urgently required by the system. In fact, it has been openly urged that in reducing the stock from a 5 per cent. annual dividend-payer to a 3 per cent. basis there is no certainty that the latter figure can be maintained under existing conditions.

ERIE PAYS IN SCRIP.

Another case in point is that of the Erie Railway, the directors of which company on last Wednesday declared the regular 2 per cent. semi-annual dividends upon its first and second preferred stocks, but made the same payable, not in cash, but in interest-bearing warrants. This course had been hinted at previously in current rumors, and was therefore no surprise. It has been fully recognized that the Erie Railroad must borrow very large additional sums of money in order to carry out the schemes of improvement planned by its management, in order to bring it up to the position of a well organized trunk line. The expenditure of actual cash derived from earnings in payment of dividends would, therefore, be a mistake at this juncture.

It is true that the earnings statement of the Erie Company for the fiscal year which ended June 30, 1907, was not an unfavorable one. As compared with the preceding twelve months' figures, it shows the following results:

	Year ending June 30, '07	June 30, '06	Increase
Miles operated	2,169	2,151	18
Gross earnings	$53,014,827	$50,002,634	$3,912,193
Working exp's and taxes	38,167,039	35,872,837	2,294,202
Net earnings	15,747,788	14,129,797	1,617,991
Inc. from other sources	475,022	537,301	*62,279
Total	16,222,810	14,667,099	1,555,712
Deduct'ns from income, interest on bonds, etc.	10,319,152	9,650,455	668,697
Balance	5,903,658	5,016,644	887,015
Less amount expen'd for additions and improv'ts	1,642,029	1,926,973	*284,944
Balance	4,261,629	3,089,671	1,171,959
Less div. on pfd stock—			
Four per cent. 1st pfd.	1,915,696	1,915,696	....
Four per cent. 2d pfd.	640,000	640,000	....
Surplus	1,705,933	533,975	1,171,959

* Decrease.

In spite of this the policy of paying scrip instead of cash has some features to recommend it and has not met with the disapproval of the financial community, whereas the cash payment by the Southern Railway has been criticised. It is nevertheless pointed out that the precedent is a dangerous one, and is a practical borrowing of money which, if it does not belong to the stockholders, ought to be regarded as needed for the upbuilding of the property. It is proper to explain that the warrants in which the semi-annual 2 per cent. dividends will be paid fall due in 1917, and in the meantime will bear interest at the rate of 4 per cent. per annum on their face amount. The company, in short, postpones the cash payment of the dividends for ten years with the proviso that its obligations for the same, which are in effect merely promissory notes, shall be interest-bearing in the meantime. Another interesting feature of the announcement is that application must be made to the Public Service Commission of New York for permission to issue the warrants, as is provided by the new law.

THE PAPER INDUSTRY.

In paper, as in other branches of manufacture, the five-year period from 1900 to 1905 saw an immense growth in capital invested, value of product and number of wage earners employed, but the number of establishments showed no gain at all—a slight decrease, in fact, being reported—which points to this, as other industries, undergoing the process of concentration forced by economic conditions. In 1905, according to Census Bulletin No. 80, the capital invested in the manufacture of paper and wood pulp aggregated $277,444,471, the number of wage earners was 65,964, and the value of products was $188,715,189. Figured on a percentage basis, it is found that between 1900 and 1905 the capital invested increased by 65.6 per cent., the number of wage earners increased by 32.9 per cent., and the value of product gained 48.2 per cent. In the ten years from 1890 to 1900 the increase in capital invested was 86.5 per cent., in wage earners employed 59.9 per cent., and in value of output 61.3 per cent. In view of the fact that the period from 1900 to 1905 covered only one-half the earlier period reported on, and that percentages of increase naturally tend to shrink as totals concerned with industries grow, the heavy gains in the later five-year period can be better appreciated.

The proportions of gain may, however, be better understood if the increases in amounts in the two periods are compared. Thus, in the earlier ten-year period the gain in capital employed was $77,678,165, while in the later five-year period the increase was $109,936,758. Also, in the value of products the increase from 1890 to 1900 was $48,388,978, while in the five years from 1900 to 1905 the increase was $61,389,027. The increase in the number of wage earners was not relatively as great as in the capital and output, the gain in the ten-year period being 18,596, as against 16,318 in the five years ending with 1905. This latter feature may be, in part, a result of production on a larger scale or the working out of the consolidation feature, which showed only 761 concerns or establishments engaged in the industry in 1905, as against 763 in 1900.

New York, Massachusetts and Maine are the three principal states in this industry, with productions valued at, respectively, $37,750,605, $32,012,247 and $22,951,124. These states with Wisconsin, Pennsylvania and Ohio produced 72.6 per cent., or nearly three-fourths of the country's entire product. News paper made up $35,906,460 of the total value of $188,715,189, with a book-paper product valued at $37,403,501, fine paper valued at $22,249,170, wrapping paper worth $30,435,592, boards valued at $16,959,557, and tissue paper valued at $5,056,438. New York produced slightly more than one-third of all the news paper made, while Massachusetts made one-fourth of the book paper and 67 per cent. of the value of the fine paper turned out. Of the total value of the materials used in the industry, wood pulp and fiber furnished $27,633,164, or nearly one-fourth of all. The quantity of wood used was estimated at 3,000,000 cords, valued at $20,000,000; rags were valued at $8,864,607, old paper made up a total value of $7,430,335, sulphur and chemicals

represented $8,333,380, and fuel used was worth $13,178,567. Up to 1897 imports of paper exceeded exports, but in 1905 the exports were valued at $8,208,088, as against imports of $5,623,638.

POOR'S MANUAL FOR 1907.

The present week has brought the fortieth annual issue of this standard publication covering the railroads of the United States, as well as street railways and the more prominent industrial organizations. As usual, the statistics presented by the Messrs. Poor in the introduction to the volume, wherein are given the aggregates of all the reporting steam railroads as to capital, earnings and operations for the year, furnish much matter of an instructive and interesting nature. At the end of 1906 it is shown that there were 222,635 miles of completed road in the United States, an increase of 4,183 miles, and of this amount returns for 220,633 miles are comprised in the figures. Compared with the results of 1905, the showing made by these properties is as follows:

	1906	1905
Gross earnings	$2,[illegible]	$2,112,197,770
Operating expenses	1,559,452,574	1,426,733,282
Net earnings	790,187,712	685,464,488
Other receipts	100,292,369	80,927,659
Total net income	890,480,081	766,392,147
Taxes	68,169,833	54,553,620
Interest on bonds	269,926,395	247,155,897
Other interest	13,107,169	12,956,346
Dividends on stock	225,601,245	193,753,869
Miscellaneous	79,806,024	59,856,679
Rentals—interest	30,612,179	31,716,773
Rentals—dividends	27,739,680	22,314,069
Miscellaneous rentals	15,042,783	22,208,880
Total payments	739,005,308	644,516,133
Surplus	151,474,773	121,876,014

The year not only represented the high-water mark as regards revenues, but was characterized by an enormous expansion in traffic, the passengers carried having been 815,774,118, against 745,446,641 in 1905, and tons of freight moved aggregated 1,610,099,829, compared with 1,435,321,748 the year before, while the number of tons carried one mile each was 216,653,795,696, or an increase of 29,278,174,159 "ton-miles," as they are termed, being equivalent to 15.6 per cent. in that item. The average receipts per passenger per mile for the whole United States, it is to be noted, was only 2.01 cents, against 2.02 cents in 1905, which is something of a comment on the 2-cent fare agitation, while the freight rate per ton per mile is given as .76 cents, compared with .78 cents. During the year the stocks of the companies were increased by $364,452,151, making the total amount $7,106,408,976, and the bonded debt of $7,851,107,778 represents a gain of $425,845,877. The average dividends on the stocks were only 3.63 per cent., against 3.27 in 1905, while the interest rate paid on funded debts is given as 3.99 per cent., compared with 3.79 per cent. Considering the enormous amount of capital which is represented by the country's railways, these average returns thereon cannot be regarded as extravagant, even though, in the case of the stocks, allowance has to be made for the normal character of many share issues and the existence of considerable "water" in that connection.

The figures which the volume presents permit also of comparisons which represent the growth of the country's railways in a series of years. This is shown in the following tabulation giving the principal items in 1906 and 1900 respectively:

	1906	1900
Mileage reporting	220,633	191,861
Locomotives	55,439	38,065
Revenue cars	2,[illegible]25,858	1,385,253
Capital stock	$7,106,408,976	$5,804,346,250
Funded debt	8,487,139,981	5,758,502,754
Total liabilities	16,768,367,396	12,428,966,022
Gross earnings	2,346,640,285	1,501,695,378
Net earnings	790,187,712	483,247,526
Other receipts	100,292,369	67,772,934
Total available revenue	890,480,081	551,020,460
Taxes	68,169,833	....
Interest on bonds	269,926,395	214,199,502
Other interest	13,107,169	6,315,628
Dividends on stock	225,601,245	119,288,879
Miscellaneous	79,806,024	46,153,433
Rentals—interest	30,612,179	30,248,304
Rentals—dividends	27,739,680	21,054,774
Rentals—miscellaneous	15,042,783	21,200,651
Total payments	739,005,308	458,460,571
Surplus	151,474,773	92,559,889
Passengers carried	815,774,118	584,695,935
Passenger mileage	25,842,462,029	16,313,284,471
Tons freight moved	1,610,099,829	1,071,431,919
Freight mileage	216,653,795,696	141,162,109,413
Average per cent. interest on bonds	3.99	4.27
Average per cent. dividends on stock	3.63	2.44
Average rate per passenger mile	2.01c.	2.03c.
Average rate per freight ton mile	0.76c.	0.74c.

A full analysis of these figures for seven years would be too lengthy. It may be noted, however, that in that period the railroads of the United States increased their mileage by 28,772 miles, or 14.4 per cent., while they added 22 per cent. to their oustanding stocks and 47.5 per cent. to their funded debts, and their gross earnings from operation increased 56.2 per cent., the revenues available for charges and dividends being 61.4 per cent. larger, and this was accompanied by a gain in the number of tons of freight moved one mile each of 75,491,586,283, or 53 per cent. Not the least interesting feature of the matter is that the increases of 17,364 in locomotives and of 640,605 in cars in service on the lines were equal to 45.2 per cent. and 46.2 per cent respectively. Moreover, there was a gain of $45,726,893, or 21 per cent., in the amount of interest paid on bonds, and of $106,312,366, or 88.4 per cent., in the total disbursements for dividend payments.

EDITORIAL NOTES.

Mail advices leave no doubt about the policy which dictated the advance of the Bank of England's discount rate from 4 per cent. to 4½ per cent. The leading financial journals of Great Britain make no secret of the fact that there is not an unlimited supply of gold in London available for export. As the London *Statist* remarks in a very well considered article, the immediate cause for the raising of the bank rate was the growing supply of high-class American bills and the desire of the open money market to take advantage of the high rates obtainable for American paper, together with the evident possibility that New York would thus be enabled to draw specie from the Bank of England. Knowledge of the fact that the supply of money in Berlin was also slim likewise had an influence in the matter. Despite the high level for sterling exchange at the German capital, gold has been taken at London for account of Berlin, and it is also to be remarked that the shipment of $1,100,000 gold from New York to Germany last week was made under circumstances which on the surface would render the transaction entirely unprofitable were it not apparent that the German demand for gold was more intense than could be foreseen from the rates of exchange prevailing in the New York market, either for sterling or marks. The British comments on the action of the Bank of England are, on the whole, favorable. They all, however, bear upon the possibility of American demands for money and the high rates of interest which New York can offer as an inducement, as well as upon the unpreparedness of the London money market to stand any serious drain of the bank's gold reserve.

The leading features of the July export trade statement are the very considerable gains shown in the exports of foodstuffs, both crude and manufactured, and in shipments of partly or wholly manufactured products. The gains in these two divisions over July, 1906, are, respectively, 21 and 20 per cent. Raw material exports fell off nearly 10 per cent. In imports, all classes except partly prepared foodstuffs gained over July last year. Following are the figures in detail for July and the seven months of the last two fiscal years:

JULY.

	1907	1906
Exports—		
Foodstuffs and live stock	$11,089,933	$7,699,865
Foodstuffs partly prepared	27,744,136	24,335,918
Raw materials	19,198,249	21,006,300
Partly manufactured	21,923,409	19,595,329
Manufactures	45,515,428	36,322,629
Miscellaneous	376,894	416,476
Total domestic	125,848,049	109,376,517
Foreign merchandise exported	2,707,186	2,316,757
Total exports	128,555,235	111,693,274
Imports—		
Foodstuffs and live stock	13,627,787	8,798,543
Foodstuffs, partly prepared	12,100,844	12,142,526
Raw materials	35,997,287	31,323,978
Partly manufactured	26,084,823	21,502,853
Manufactures	36,275,783	28,098,794
Miscellaneous	744,442	725,755
Total imports	124,830,966	102,592,449

SEVEN MONTHS.

	1907	1906
Exports—		
Foodstuffs and live stock	$95,157,965	$101,660,481
Foodstuffs, partly prepared	205,419,828	200,427,094
Raw materials	297,805,533	231,447,327
Partly manufactured	156,326,486	142,283,134
Manufactures	292,074,976	273,210,468
Miscellaneous	4,660,026	4,942,825
Total domestic	1,051,444,814	953,971,269
Foreign merchandise exported	17,560,793	15,564,733
Total exports	1,069,005,607	969,536,002
Imports—		
Foodstuffs and live stock	87,545,290	71,040,488
Foodstuffs, partly prepared	100,381,193	81,377,428
Raw materials	298,781,880	262,614,117
Partly manufactured	165,165,383	137,010,025
Manufactures	217,525,305	182,825,656
Miscellaneous	6,207,008	5,084,055
Total imports	876,110,149	739,951,779

In the seven months' exports the feature is the heavy gain in shipments of raw materials—28 per cent.—which is entirely explained by the gain of 37 per cent. in exports of raw cotton. Shipments of food products of all kinds almost balance those of the same period a year ago, only a slight decrease being shown, while partly and wholly manufactured products combined gained 8 per cent. over 1906. In imports, gains are general, ranging from 23 per cent. in the case of food to 13 per cent. in the case of raw materials, and 20 per cent. in the case of wholly or partly manufactured products.

That the money was well expended will probably be the verdict when the new Ambrose channel, which, it is estimated, will cost $4,000,000, is formally opened to the ships entering and leaving the port of New York. What was equivalent to the informal opening of this new passage to the sea occurred on August 27, when the Cunard liner Caronia, drawing thirty feet of water, passed through outbound without a mishap, demonstrating by soundings that there was at least thirty-five feet of water in the channel, and making it apparently certain that when the new Lusitania arrives she will be able to enter and leave the port without lightening, as has been necessary in the cases of some other large steamships, which have had to sacrifice carrying capacity to depth conditions in the old existing Main Ship and Swash channels. The new channel, which is about seven miles long, was passed through by the Caronia in forty-five minutes, and the time employed from leaving the dock to dropping the pilot was one hour and thirty minutes. This means in the matter of time a saving of only thirty minutes, but in safety the gain for a large steamer is great, because the sharp turns of the old channel, especially the angles where the main channel turns inside of Sandy Hook, are avoided. To allow of the Caronia using the Ambrose channel there was a suspension of dredging operations, and the new passage was marked with buoys. This, of course, was only temporary, and the work of deepening the channel to the projected depth of forty feet, with a width of 2,000 feet, will go on till completed. When finally finished this work will give New York a preëminence and an ability to float the largest ships existing or likely to be built for years to come, and by offering a new and wide channel for the heaviest ships, it will tend to relieve the shallower channels of much of the shipping which at times crowds them to the limit of safety. It adds a fourth to the three existing channels, and is therefore a distinct gain to the commerce, not alone of New York, but of the entire country. It might incidentally be remarked also that the defense of this new and deep channel in time of war adds still another problem to those which will confront those departments of the government which have to deal with the subjects of national defense, and likewise recalls the belief that when the eastern half of the continent was in process of making, the mouth of the once great river which drained this portion of the United States was something like eighty miles south and east of the entrance to the present harbor of New York.

Rumor has been exceedingly busy this week in connection with the Interborough-Metropolitan Company and its constituent companies, market occurrences including a sensational break in the stock of the Third Avenue (surface) Railroad, one of the leased lines of the Metropolitan Street Railway Company. The reports which have circulated in Wall street in relation to the great traction merger have in a large measure borne upon the possibility of a disruption of the deal or a reorganization of the combination in a drastic manner. There is, of course, nothing definite in regard to this. The interests connected with the organization, however, have been quoted as giving no countenance to the vague talk of a receivership, and at the meeting of the Interborough-Metropolitan directors, held a few days ago, no action was taken in regard to the dividend on that company's preferred stock, which it had been widely asserted was to be cut or passed. It may be noted that the securities of the Interborough-Metropolitan and its controlled properties (with the exception of the Third Avenue Company) have been somewhat firmer. At the same time the revelations brought out by the examination of the merger and of the several companies involved has not failed to create a very unpleasant impression, and Wall street apparently assumes that severe action is needed to place some of the concerns involved in a stable financial position.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Free Transportation—Claim—Release.

The United States Circuit Court for the Western District of Kentucky held, in the case of Molley vs. Western District of Kentucky, that a contract for free transportation for life on a railroad in consideration of the release of a claim for damages for injuries was not abrogated by the provision of the amendment to the Interstate Commerce act passed in 1906 prohibiting the issuance of free transportation.

Warranty—Breach—Elevator—Damages.

The Supreme Court of Arkansas held, in the case of Elmore vs. Booth, that the buyer of an elevator to hoist cotton from wagons to the gins operated by him, under a warranty that it would properly feed sixty-saw gins, could not recover on a breach of warranty the amount lost in his failing to gin a specified number of bales, which he would have ginned had it not been for the defective work of the elevator, nor for the cost of fuel used while working overtime in consequence of the defect, the damages being too remote.

Witnesses—Exemption—Process—Waiver.

The United States Circuit Court for the District of Idaho held, in the case of Skinner & Monuck Company vs. Waite, that a person going into another state as a witness or as a party to attend upon the trial of a cause is exempt from process in such state while necessarily attending there in respect of such trial, but that where persons entitled to such exemption from service of process lay aside their character of parties or witnesses and engage in transactions giving rise to the institution of suits against them by third parties, they are deemed to have waived the privilege they might otherwise claim.

Negligence—Liability—Fair—Association.

In the case of Hollis vs. Kansas City Retail Merchants' Association, recently decided by the Supreme Court of Missouri, it appeared that the defendant association gave a street fair and carnival in which an amusement company furnished appliances for amusements, including gondolas similar to a merry-go-round, under contract, by which the fees for riding on the gondolas, collected by the company, were divided between the association and the company. The association had general charge of all the grounds and took an active part in distributing advertisements of the amusements. The court held that the association as well as the company was liable for injury to one riding on the gondolas caused by negligence in the construction, operation and management thereof.

Removal of Causes—Foreign Corporation.

In the case of The Diamond State Telephone Company et al. vs. Blake, decided by the Maryland Court of Appeals, it appeared that the telephone company, which had been incorporated under the laws of Delaware, was sued with a light and power company incorporated under the laws of Maryland by a resident of the latter state for damages alleged to have been sustained by him by reason of coming in contact with a wire heavily charged with electricity. The telephone company made application for the removal of the case to the Circuit Court of the United States for the District of Maryland. The light and power company objected to the removal, and the trial court refused the application. The Court of Appeals held that as the plaintiff and one of the defendants were citizens of Maryland, the other defendant could not have the cause removed to the United States Circuit Court on the ground of diverse citizenship, although it was a foreign corporation.

Part Payment—Accord—Satisfaction.

The Maryland Court of Appeals held, in the case of Singer Sewing Machine Company vs. Lee, that while an agreement to take a smaller sum in payment of a larger one is without consideration and not binding in law, yet the acceptance of a less sum before the day of payment has arrived in satisfaction of the whole would be a good accord and satisfaction; the anticipation of the time of payment being a sufficient consideration to support a plea of that nature. The court said in reversing a judgment against the appellant: "The evidence adduced by the defendant, if believed by the jury, was sufficient to support the plea of accord and satisfaction and thus defeat a recovery by the plaintiff. The defense of accord and satisfaction consists of something given to or done for the defendant and accepted by him upon a mutual agreement that it shall be a discharge of the cause of action. The agreement is the accord, and the thing done is the satisfaction. The mere payment of a smaller sum is no satisfaction of a larger debt due, but the payment of a smaller sum may be a satisfaction of a larger sum where there is a mutual consideration to support an agreement to that effect. The authorities are uniform in holding that anticipation of time of payment is a sufficient consideration to support a plea of accord and satisfaction."

Parol Evidence—"Fully Insured."

The Supreme Court of South Carolina held, in the case of Kentucky Wagon Manufacturing Company vs. People's Supply Company, that the term "fully insured" in a written policy could not be explained by parol to mean insured to three-fourths of the value of the property, as such evidence would be contradicting and not explaining the term. The court said: "Conceding it was the usual practice of insurance companies in general to write policies containing the three-fourths clause, such practice could not be shown for the purpose of contradicting words in agreements entered into between third parties which are free from ambiguity or equivocation, and in their ordinary and usual acceptation have but one meaning, as in the case under consideration. This would infringe upon the well-settled doctrine that parol testimony is inadmissible for the purpose of contradicting the terms of a written instrument. The charge would have been free from error if the testimony had been explanatory instead of contradictory of the terms used in the agreement."

Pullman Cars—Obligation of Contracts.

In the case of State ex rel. Coleman vs. Pullman Company, recently decided by the Supreme Court of Kansas, it appeared that the Pullman Company, an Illinois corporation, contracted with the railway companies operating lines of interstate railroads in Kansas to furnish them a sufficient number of Pullman cars to meet the demands of the traveling public for that kind of service, to equip such cars for use, to provide conductors and porters for them, and to supply Pullman accommodations to railway passengers holding proper tickets without discrimination between such passengers, reserving the right to charge and collect from passengers demanding the service compensation therefor. Subsequently the legislature enacted a law requiring foreign corporations to comply with certain conditions, including the payment of charter fees for the privilege of transacting interstate business, to which law the Pullman Company refused to submit. The court held that a judgment ousting it from the franchise of charging and collecting compensation for Pullman accommodations furnished to passengers taken up and set down within the limits of the state did not violate the obligation of its contracts with the railway companies.

Taxation—Sale—Federal Property

The Supreme Court of Pennsylvania held, in the case of Mint Realty Company vs. City of Philadelphia, that where the United States sells real estate, reserving title to itself until all payments are made, such real estate is not taxable until the vendee has made all the payments and performed the conditions. The court said: "The power to tax implies the power to divest the title by a tax sale when there is default in the payment of the taxes levied. Hence the federal government has most carefully guarded its property from the vigilance of the local tax gatherer. There is, however, an exception to the general rule recognized by the federal courts, and that is where Congress has prescribed the conditions upon which portions of the public domain may be alienated, and provided that upon the performance of the conditions a patent of the United States shall issue to the purchaser. * * * It must not be overlooked, however, that this exception is only recognized where Congress has prescribed the conditions upon which portions of the public domain may be alienated, and directed that upon the performance of these conditions a patent shall issue. In these exceptional cases the federal courts have distinctly held that all of the precedent conditions must have been complied with so that nothing remains on the part of the purchaser to be done before he is entitled to the legal title in order to subject the property to local taxation."

BUSINESS NOTES.

The World's Output of Flaxseed.

The world's crop of flaxseed in the three years 1903-05, inclusive, averaged a little more than 107,000,000 bushels. In 1903 the crop was 110,445,000 bushels, in 1904 it was 112,774,000 bushels, and in 1905 it was 100,607,000 bushels. Argentina leads the world with a production of 30,076,000 bushels in 1903, 36,912,000 bushels in 1904, and 29,133,000 bushels in 1905. The United States is second, its crop being 27,301,000 bushels in 1903, 23,401,000 bushels in 1904, and 28,478,000 bushels in 1905. British India occupies third rank for the period, with an annual average of about 19,000,000 bushels for the three years, but in 1905, owing to India's short crop, which amounted to only 13,896,000 bushels, Russia was actually entitled to third place, with an output of 17,000,000 bushels, and an annual average for the three years of about 17,500,000 bushels. The following table shows the crop in detail for the years 1904 and 1905:

	1904, *Bushels*	1905, *Bushels*
United States	23,401,000	28,478,000
Canada	655,000	757,000
Mexico	188,000	150,000
Argentina	36,912,000	29,133,000
Uruguay	5,530,000	6,000,000
Austria-Hungary	1,380,000	1,592,000
Belgium	300,000	280,000
Bulgaria	36,000	2,000
France	608,000	575,000
Netherlands	459,000	437,000
Roumania	169,000	335,000
Russia (European)	19,404,000	18,100,000
Sweden	37,000	37,000
British India, including native states	22,873,000	13,896,000
Russia (Asiatic)	786,000	800,000
Algeria	36,000	35,000
Total	112,774,000	100,607,000

The Northwest's 1906 Wheat Crop.

"The northwestern wheat crop of 1906 is now history, but before passing it to oblivion for good it will be worth while to review the movement and see just what it consisted of, where it went to, and incidentally make a comparison of the various estimates made a year ago with what can now be demonstrated to have been its actual size," says the Duluth *Commercial Record*, which in September last "estimated the total crop at 208,000,000 bushels, and latter was inclined to raise that estimate to about 215,000,000 bushels, giving spring wheat 170,000,000 bushels and durum 40,000,000 to 45,000,000. H. V. Jones placed the crop at 230,000,000 and later reduced his figures to 215,000,000. The government said 174,000,000. The actual movement shows the crop to have been 208,000,000 bushels, and that is probably about right, as there is no reason to think farmers' holdings any larger than on August 1, 1906. Of spring wheat Minneapolis received 64,170,000 bushels; Duluth, 28,673,000 bushels; country mills ground a total of 74,991,000 bushels, of which 16,700,000 bushels was shipped out of Minneapolis, and probably about 1,000,000 bushels was durum, leaving net spring-wheat receipts from farmers of 58,291,000 bushels. Reseeding requirements were close to 19,000,000 bushels. Tabulated, these details are as follows:

Minneapolis receipts	64,170,000
Duluth receipts	28,673,000
Country mills	58,291,000
Reseeding	19,000,000
Total spring wheat	170,134,000

The durum wheat crop will prove surprising in that it does not appear to be as large as generally thought. The details of movement follow:

Receipts at Duluth	24,154,000
Receipts at Minneapolis	8,800,000
Country mill consumption	1,000,000
Country elevator store August 1	1,000,000
Reseeding	3,750,000
Total	38,704,000
Less probable duplications	704,000
Net crop	38,000,000

Growth of World's Shipping.

The Statistical Office of the German government has issued a report which shows the ocean shipping of the eleven leading commercial countries of the world. Such a compilation was first made by the Norwegian Statistical Bureau in 1888, and the German figures are published in comparison with those of that bureau. The two publications, therefore, give a fairly correct view of the development of the world's shipping in the seventeen years from 1888 to 1905. The investigations under consideration are based upon the number of vessels arriving at all the seaports of the countries named, hence they have no bearing upon the ownership of the vessels or the amount of cargo carried. In the following table the arrivals in register tons are given for 1888 and 1905, the former year from the Norwegian and the latter from the German authority, and the percentage of increase is given in the third column:

Arrivals in	1888	1905	*P. ct.*
England	37,749,000	48,332,000	30
France	15,450,000	21,887,000	42
United States	13,368,000	30,983,000	132
Spain	11,974,000	15,769,000	32
Germany	9,442,000	19,130,000	103
Russia	7,413,000	11,375,000	53
Italy	7,373,000	12,722,000	73
Netherlands	5,336,000	11,741,000	118
Belgium	4,913,000	11,615,000	136
Portugal	3,630,000	14,043,000	290
Japan	1,486,000	14,373,000	867

The United States made the largest absolute gain. Its arrivals increased by 17,615,000 tons, as against 11,083,000 for England, 6,437,000 for France, 9,688,000 for Germany, 10,440,000 for Portugal, and 12,877,000 tons for Japan. The increase for Japan, indeed, is so prodigious as to cast suspicion upon the figures for at least one of the years; most probably the Norwegian statistics were defective for that country. Another thing brought out in the above comparison is the strong shifting of commerce toward the smaller countries. The following table shows how the participation of the various countries in the total shipping movement shifted from 1888 to 1905:

	1888, *per cent.*	1905 *per cent.*	*Changes*
England	28.36	20.85	—7.51
France	11.77	9.44	—2.33
United States	10.18	13.36	+3.18
Spain	9.12	6.80	—2.32
Germany	7.19	8.26	+1.07
Russia	5.64	4.81	—0.73
Italy	5.02	5.50	—0.12
Netherlands	4.06	5.07	+1.01
Belgium	3.74	5.01	+1.27
Portugal	2.74	6.06	+3.32
Japan	1.13	6.20	+5.07
	100.00	100.00	

French Exports to America.

Consul-General Frank H. Mason, of Paris, writes that a consolidation of the total values of exports to the United States, as declared in invoices at the several American consulates in France, shows that the aggregate values of such exports during the fiscal year ended June 30, 1907, far exceed those of 1906 or any previous fiscal year. Figures follow:

	1906	1907	*Increase*
Paris	$52,037,683	$64,143,479	$12,105,796
Bordeaux	6,220,713	7,684,926	1,455,213
Calais	7,516,516	7,717,507	200,991
Grenoble	2,225,418	3,677,963	1,452,545
Havre	1,779,747	2,653,331	873,584
Limoges	2,010,122	2,178,125	168,003
Lyon	12,002,966	14,595,530	2,592,564
Marseille	8,284,095	8,546,126	262,031
Nantes	1,068,280	1,004,259	*63,821
Nice	1,257,119	1,570,532	313,413
Rheims	6,817,576	7,728,618	911,042
Roubaix	2,487,386	2,481,829	*5,557
La Rochelle	1,149,562	1,531,537	381,975
Rouen	514,886	510,667	*4,219
St. Etienne	1,764,441	3,020,109	1,255,668
Total	107,145,310	129,044,538	....
Algiers	719,265	863,851	144,586
Total	107,864,575	129,908,389	22,043,814

* Decrease.

Thus, it appears, exports to our country increased over 21 per cent. These figures include only merchandise declared at the several consulates for export at wholesale market values and in quantities of $100 or more. They do not include the considerable quantities of similar merchandise sent during the year from France to the United States as postal or express packages of less value than $100, which require no authenticated invoice and therefore do not come under consular supervision. Neither do they include the far greater quantity of clothing, jewelry, furs and various other articles of luxury and taste which were purchased there during the year by the vast throng of American visitors and taken home without consular authentication as personal effects. Exports under these latter two categories probably exceeded in value $20,000,000, so that the aggregate contribution of France to the sum of American imports during the year exceeded $150,000,000, a figure never before attained in our import trade from that country. An analysis of the statistics of the Paris consulate shows that the important increase of more than $12,000,000 over 1906—already a record year—has been due not to any extraordinary impetus in any article or group of merchandise, but to a uniform growth along the whole line, as this table shows:

Articles	*Fiscal year* 1906	*Fiscal year* 1907	*Increase*
Art, works of	$3,132,168	$4,165,408	$1,033,240
Automobiles and parts	3,800,358	4,950,787	1,090,424
Costumes	1,639,258	1,660,305	21,047
Dress goods	2,479,424	3,358,750	879,326
Furs	508,051	778,668	270,617
Gloves	1,083,104	1,357,435	274,331
Hides and skins	5,512,186	7,708,151	2,195,965
Horses	422,820	1,073,596	650,776
Laces	1,481,156	1,614,424	133,268
Lingerie	835,399	993,154	157,755
Millinery goods	4,565,765	6,186,727	1,620,962

CURRENT BUSINESS NEWS.

Commercial.

The German Imperial Statistical Bureau estimates the crop conditions as under:

	Aug. 15, 1907	*July* 15, 1907	*Aug.* 15, 1906
Winter wheat	72%	74%	86%
Spring wheat	84	82	..
Rye	78	78	78
Oats	84	84	88
Potatoes	78	82	78

An unofficial report states that the weather for harvesting is very unfavorable.

The *Modern Miller* states that should the United States export even as much wheat and flour as last year it would reduce our reserves to under 50,000,000 bushels and put it on the danger line.

The total Chinese customs collections from April to June last were $6,600,439.89, as compared with $6,520,184.95 for the corresponding months in 1906. The receipts at the port of Shanghai were $2,428,866.40, as against $2,210,210.44.

The week ending August 26, 1907, was abnormally cool in the upper lake regions, central valleys and middle plateau region, and light to heavy frosts occurred in nearly all of the extreme northern states from Montana to New York. The temperature conditions on the Atlantic and Pacific coasts differed but slightly from the normal, while in the gulf states the weather was considerably warmer than usual, especially in the western districts. Drought continued in New York, northern Ohio and western Alabama, and with increasing severity over the greater part of Texas; it has been partly relieved in New England, Oklahoma and South Dakota, and wholly relieved in northern New Jersey, Pennsylvania, Mississippi, Arkansas and Missouri. There was more than the usual amount of cloudiness in the middle and southern Rocky mountain regions, Kentucky, Tennessee and the south Atlantic states; elsewhere the sunshine was above the average. The week was almost entirely free from local storms of severity.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The weather is now better for harvesting. An official report for August makes the condition of wheat in Great Britain 100 per cent.; oats, 103 per cent.; potatoes, 96 per cent. The acreage under wheat is reported at 1,625,000 acres, and oats 3,122,000 acres. It is considered that this indicates a total yield of wheat of 50,400,000 bushels. France—Indications point to a full crop of good quality. Germany—The weather last week was wretched. The main part of the wheat crop is still uncut. Potatoes are much diseased. Hungary—Some rain has fallen, which is beneficial for corn. Roumania—The quality of the wheat has not been maintained. Rains have fallen, which may have some benefit for the corn crop. Russia—Further complaints are heard regarding disappointing results for wheat. Spring-wheat arrivals are very small. The outlook for corn is unfavorable, but some rains have fallen. North Africa and Tunis—The crop outlook is good. Algeria—Threshing returns are disappointing. Sweden—The wheat crop is a fair one, but very late.

The British War Secretary confirms the report that an order for 100,000 sets of horseshoes has been placed in the United States. He adds that in the interest of the economical administration of the army he cannot disregard sources of supply which are satisfactory both as regards price and efficiency.

Reports to the Cape Cod Cranberry Growers' Association indicate a crop of 110,000 barrels this year, a falling off of from 50,000 to 60,000 barrels from 1906.

Broomhall thinks wheat must advance to where it will reduce the consumptive demand. He says: "The market appears fundamentally strong, as the world's crop, after such an abnormal spring and summer as we have experienced, cannot fail to be a short one, while on the other hand the demand for wheat has grown enormously in recent years of abundance. It is only a question of how greatly the consumption may be checked by the elevation of the price by, say, 5 shillings per quarter, which approximately represents the difference between the depressed price of a year ago and to-day's average price."

Reports to the *Journal of Commerce* make the condition of the cotton crop as of August 23 73.9 per cent., against 77.5 last month, 77.6 in 1906, 72.4 in 1905 and 77.4 in 1904. The decline of 3.6 points is due almost entirely to a loss of 10.4 points in Texas, owing to drought and boll weevil.

A compilation of the figures for cotton imports into China, including all classes of cotton and cotton products, except yarns, shows the following results, the amounts being in Haikwan taels:

	1906	1905	*Per cent. decrease*
Total imports	91,597,993	118,437,757	22.7
From United States	24,799,877	42,109,525	41.3
From United Kingdom	48,908,151	58,358,253	16.2
From Japan	3,911,997	3,397,849	*15.1

* Increase.

Trade has declined not only with the United States, but with Great Britain as well, but there has been a very much greater decrease in American exports.

According to the *Journal of Commerce*, total interest and dividends payable by leading corporations in September will represent $76,097,351, of which dividend disbursements will contribute $44,847,351, or an increase over the same month a year ago of $7,496,206. A summary of the September dividend disbursements, with comparisons with the same month a year ago, follows:

	1907	1906	*Increase*
Industrial	$28,277,947	$22,136,550	$6,241,397
Steam railroads	15,939,695	14,839,995	1,099,700
Street railways	629,709	474,600	155,109
Total	44,847,351	37,451,145	7,496,206

According to the reports of consular invoices, the district of Hamburg, Germany, in the fiscal year 1907, shipped to the United States goods valued at $19,765,239, compared with $15,854,674 in the previous year. There was a gain of $3,910,565 in favor of the latest year. This remarkable increase is almost equaled by the gains from the Stettin and the Berlin districts. The total increase for the past year was $27,000,000 out of a total export of nearly $162,000,000 for the entire empire's exports to the United States.

Financial.

Trustees of the Great Northern ore certificates on Monday announced a distribution of $1 a share, payable September 16. This is the first dividend to be declared on the certificates, of which 1,500,000 are outstanding. They were issued last December to Great Northern stockholders as their share of beneficial interest in the ore lands lease to the Steel Corporation by the Great Northern Railway.

The Comptroller of the Currency on Monday issued a call for a statement of condition of all national banks at the close of business August 22.

The Berlin correspondent of the London *Economist* says that "a compilation of the semi-annual reports of the thirty-seven German mortgage banks for the past half year shows an aggregate of £448 300,000 obligations outstanding at the end of June, a gain of only £9,597,000 for the half year, against a gain of £12,194,000 for the corresponding half of 1906. This year's gain was the smallest for seven years. The operations of these institutions are of special significance, since it is chiefly with their money that building is carried on in the cities and towns. They supply themselves with money by selling their obligations, and then lend it to builders and house owners upon mortgages. It is a striking fact that the banks had to confine their sales of obligations during the past half year almost exclusively to the 4 per cent. denomination, the 3½ per cent. bonds having almost wholly passed out of vogue. Still more striking is the fact that several of these institutions have within the past month (July) put out 4½ per cent. obligations. This is a direct consequence of the increasing quantities of 4 per cent. securities recently brought out by the empire, the various German states, and the municipalities, which have been offering a sharp competition for the mortgage bank bonds of that denomination."

The members of the New York Consolidated Stock Exchange opened their session at 10 o'clock Monday morning in their new building at Broad and Beaver streets, instead of in their old quarters at Broadway and Exchange place.

The annual convention of the American Bankers' Association is to be held at Atlantic City from September 25 to 27. The delegates will be welcomed by Governor Stokes. The morning session will be taken up for the most part by the reading of the reports of the secretary, James R. Branch, and of the various committees. There will also be addresses by Governor Swanson, of Virginia; by Moritz Leifferman, a delegate from the Centralverband der Deutschen Banken und Bankiergewerbe, and by William S. Witham, of the Witham Banks, Georgia. On Thursday, September 26, A. Barton Hepburn, chairman of the Currency Commission, will read the commission's report, and time will be devoted to discussion of it and other banking questions. There will be a review of the report and other suggestions by Congressman Charles N. Fowler, chairman of the Committee on Banking and Currency. On Friday there will be further discussion of practical banking questions and the following addresses: "Our Present and Future Prosperity," by M. E. Ingalls, of Cincinnati, and "Some Ever Green Topics," by T. P. Knight, secretary of the Canadian Bankers' Association. The trust-company, savings-bank and clearing-house sections will hold their conventions at the Marlborough-Blenheim Hotel on Tuesday, September 24.

At their meeting Wednesday the directors of the Erie Railroad Company declared the regular dividend on the issues, but made the dividends payable in dividend warrants of a form to be agreed upon by a special committee of the directors and the road's counsel. The warrants, which will bear 4 per cent. interest, are due in 1917. The dividends amount to $1,915,696 on the first preferred and $640,000 on the second preferred stock. Application will at once be made to the Public Service Commission for leave to issue the dividend warrants.

Owing to a telegraphic error last week we were made to report the bank clearings of Cleveland, Ohio, for the week ending August 22 last at $8,316,000, which error also led us to credit Cleveland with a decrease of 43.8 per cent. from the corresponding week in 1906. As a matter of fact Cleveland's bank clearings for the week ending August 22, 1907, should have read $18,316,000, the actual increase over the corresponding week in 1906 being no less than 23.7 per cent. As already stated, the error was due to faulty telegraph service, which is at present laboring at a disadvantage, owing to the strike of operators; but the error to which we have just referred is the first really serious one we have noticed since the strike began.

The first dividend reduction to be made by any of the great copper-producing companies as a result of the falling prices of the metal came Wednesday with the announcement that the Quincy Mining Company had declared a quarterly dividend of $2.50 a share, a reduction of $2 from the rate paid in each of the previous two quarters. The present dividend restores the rate to the basis of last fall's dividend. The directors decided that there were grounds for believing that the consumption of copper was falling off, and that it was difficult just now to tell with certainty what the future of the copper market was to be. Under these conditions it was deemed wise to act cautiously. The Quincy Company's output is about 18,000,000 pounds yearly. The Quincy Company was established in 1848, and can, it is said, produce its product at a price of about 10½ cents a pound.

Railroads.

John Sebastian, passenger traffic manager of the Rock Island-Frisco lines, has struck upon a happy idea for bringing to the eyes of the public some of the meritorious features of the system which he represents. Mr. Sebastian has selected as his medium for this purpose an ordinary folder that is about the size of the average railway time table. The attributes of the Rock Island-Frisco lines, as well as the natural advantages of the regions traversed by this system, are well set forth in the letterpress which appears on the pages of the folder; but upon opening the folder and spreading it out, the mind and the eye are treated to a series of diagram maps, which show, for instance, the quantity of bituminous coal, natural gas, number of animals, as well as the quantity of cereals and cotton, produced in the so-called Rock Island-Frisco states. By diagram it is shown that the total population of the United States in 1907 was 87,882,170, and that 40.56 per cent. of this population was settled in the so-called Rock Island-Frisco states, and it is also shown that the total area of the United States amounts to 3,617,673 square miles, and that the Rock Island-Frisco lines traverse 37.2 per cent. of this. In 1906 the Rock Island-Frisco states produced 62 per cent. of the total yield of oats, 27.4 per cent. of that of rye, 76.8 per cent. of the output of cotton, 47.3 per cent. of the yield of barley, 57 per cent. of the yield of wheat, and 76.5 per cent. of the corn grown. The Rock Island-Frisco lines and the Chicago & Eastern Illinois Railroad traverse Alabama, Arkansas, Colorado, Illinois, Indiana, Iowa, Kansas, Louisiana, Minnesota, Mississippi, Missouri, New Mexico, Oklahoma, South Dakota, Tennessee and Texas.

Industrial.

In addition to the strong home demand for anthracite coal, there are also inquiries from abroad. Agents of foreign firms are endeavoring to make large contracts, to be delivered at Adriatic ports. Coal is not only very high but is very scarce in southeastern Europe, and this has led to efforts to obtain American coal.

Wm. A. Read & Co.

INVESTMENT SECURITIES

25 Nassau Street, New York

BOSTON CHICAGO BALTIMORE

The United States Geological Survey reports the coal production for 1906 of the following states:

	Short tons	*Spot value*
Colorado	10,111,218	$12,735,616
Iowa	7,266,224	11,619,455
Kansas	6,024,775	8,979,553
Virginia	4,254,879	4,183,991
Missouri	3,758,008	6,118,733

Reports indicate that "dirt is now flying" at Panama. The July record of 1,126,748 cubic yards excavated being the best yet attained. At the rate the work is now going on it will take twelve years to complete the canal, but it is hoped that it will be finished earlier. The total amount to be excavated by the United States is 111,280,000 cubic yards. Excavated up to August 1 of this year, 9,380,000 cubic yards, or 85 per cent. of the total necessary excavation. To do this it has taken three years.

The production of cement in 1906 amounted to the enormous total of 51,000,445 barrels, valued at $55,302,277, exceeding by 10,897,137 barrels in quantity and $19,370,744 in value the production of 1905, which had been the banner year. Classified according to character, the production was as follows:

	Barrels	*Value*
Portland cement	46,463,422	$52,466,186
Natural cement	4,055,797	2,423,170
Puzzolan cement	481,224	412,921

According to the *Western Tobacco Journal*, "the fiscal year ending June 30, 1907, may justly be termed an auspicious one for the tobacco manufacturing trade of the United States. Without exception all previous records were broken, the output of cigarettes for the first time exceeding the five-billion mark and surpassing the previous high records of 1896 and 1897. The total collections from all sources were $51,811,069.69, an increase over the fiscal year 1905 06 of $3,388,072.31, or 7 per cent. These are the largest receipts in a single year since 1902, when the Spanish war taxes were in force. Since the first tax was levied in 1862 collections have amounted to $1,556,463,989. Production for the fiscal year follows:

	1906-07	1905-06	*Increase*
Tobacco, pounds	360,186,288	354,915,499	14,270,789
Cigars, number	7,490,144,794	7,174,805,223	315,339,571
Small cigars	1,152,132,850	895,867,425	256,265,425
Small cigarettes—			
At $1.08	4,325,570,940	3,122,196,694	1,203,374,246
At 54 cents	826,203,589	661,079,914	165,123,675
Total	5,151,784,529	3,783,276,608	1,368,407,921
Large cigarettes	15,167,227	9,493,690	5,673,537
Total cigarettes	5,166,941,756	3,792,770,298	1,374,171,158
Snuff, pounds	23,401,197	22,707,539	693,658

The open-hearth rail mill at the Bethlehem works was opened Tuesday for the first time. It is said that the Bethlehem corporation has its complete output of rails sold ahead for the next twelve months, and possibly until the end of next year. Some fancy prices were obtained for these rails, as high as $35 a ton being obtained.

Miscellaneous.

One writer calculates that Americans this year have spent $7,500,000 in London. At one of the largest hotels, which has housed 6,600 Americans since March, the average bill has been $250. There are at least five hotels which can give similar figures, and assuming that the average American spends besides $125 in London, which is not an extravagant estimate, the writer reaches his total, which, as the result of his investigations, he apportions as follows:

Spent in hotels and boarding houses	$2,500,000
Tailors	120,000
Haberdashers	75,000
Hatters	50,000
Jewelers	1,000,000
Antiques	1,750,000
Furniture	25,000
Draperies	1,000,000
Dressmakers	750,000
Cabmen	25,000
Motors and carriages	55,000
Theaters	60,000
Music halls	60,000
Tobacconists	30,000
Total	7,500,000

The latest quarterly report of the New York department of taxes places the total of property in the city that is exempt from taxation at $1,156,346,803. In 1898 the value of property exempt was only $519,191,506. The total assessed value of taxable property has grown in the same period from $2,367,325,493 to $6,795,341,915, the bulk of the increase being in Manhattan. The land value in Manhattan is placed at $123,678,138 per square mile and $193,247 per acre. Land values in Brooklyn are only $9,514 per acre, and $8,304 in the Bronx.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Crop and trade developments display irregularity, rendering generalization difficult. Extremes of abundant moisture, cool weather or continued drought are noted in different sections, causing improvement in some instances, arresting development in others, and in places working damage of a more or less serious character. Fall jobbing trade has improved at most large centers, and from the northwest comes the report that goods ordered held back are now being urged for quick delivery. On the other hand, while some markets are well filled with buyers, and some lines report sales exceeding a year ago, there is a noticeable undercurrent of conservatism in buying, and there is less than ordinary purchasing of complete new stocks of merchandise for new enterprises. Yet, again, there are instances, as, for example, in the eastern leather and shoe trades, where conservatism in buying early in the year has resulted in curtailment of production, and now hurry orders for goods are noted. Dry goods and wearing apparel, such as clothing, shoes and millinery, show chief activity as befitting the season. One leading industry that has lagged for some time—flour milling—shows increased activity, and improved export demand for both flour and wheat at advanced prices is instrumental in causing an optimistic feeling that short yields will be offset by higher values. Cotton also has advanced, but here crop uncertainties are as much an element as is manipulation for an advance by speculators for the rise here and abroad. In some other lines of industry there is evidence of quieter demand. Thus, pig iron is weak and lower, and there is complaint that the railways are not buying rails as freely as looked for, though, on the other hand, reservations for next year's delivery are large, pending agreement on specifications as to rolling new styles of rails. Collections are still a subject of complaint as for some time past, special emphasis being placed on New York collections, where discounts are less numerous than formerly. Money is still very firm the country over, and this element is really the dominant feature in the encouragement of conservative buying, though the general feeling in financial circles shows improvement this week. Banks are taking care of their customers at the high quotations heretofore reported, but show little disposition to seek new business. Currency shipments to the country are increasing, and at some western cities loans, deposits and cash resources are below those held in May, though exceeding a year ago at this time.

Unequal distribution of heat and moisture make for very irregular crop reports to BRADSTREET'S. Recent cold weather in the northwest and rains have made for some loss in spring wheat, oats and barley and tended to arrest the maturing of corn. Also, in the Pacific northwest there are reports of rains affecting harvesting operations in eastern Washington, where only half the wheat crop is cut. On the other hand, heavy rains have benefited corn in Nebraska and Missouri. There is general agreement that a long warm fall is needed for best results in corn. Otherwise some of this year's immense area will not mature. In Indiana the corn crop outlook is not good because of rain damage, and the lateness of the tomato crop causes uneasiness as to final yield of this important vegetable. In New England and parts of the middle states the drought situation has become really serious. Wells are failing and some factories have stopped work because of deficient water power, while crops have been badly hurt. In the southwest the Texas cotton crop has been hurt for want of rain, and deterioration is noted in all parts of that state. Parts of the south Atlantic states also note the need of rain, but the cotton crop in that section generally promises a yield fully equal to last year, while in the lower Mississippi valley cotton crop conditions are reported almost ideal. The Oregon hop crop is not turning out as well as expected, and the oats yield is a poor one the country over. It is, in fact, almost impossible to generalize as to crop conditions in the country as a whole.

Foundry pig iron is weaker at all markets, and in a few centers resale iron is being continually offered. In the east the lower level of prices has brought out some inquiries, but current business is composed of odd lots to cover immediate needs. It is said that $19 would be accepted for No. 2 iron, Lehigh furnaces, that is, if the tonnage was large, while $18.50, Birmingham, is quoted for southern iron intended for delivery this year, and in one instance as low as $17 has been quoted for the first six months of next year. Stocks are not accumulating to any marked extent, but prospects favor a piling up in the future unless conditions change, and, in fact, it is reported that several stacks in the east are booked to blow out within the next few weeks. In the west the leading interest has a surplus supply of steel-making iron, but in the east supplies are limited. New business in structural material, mostly for bridge work, is good, and further heavy orders are pending. Demand for steel rails is disappointing, but it is stated that reservations for next year, pending an adjustment of specifications, are heavy, and a large foreign order is also looked for. Demand for the lighter kinds of rolling-mill products tends to decline, and the plants are rapidly working off old orders. The slowness of collections, particularly from the railroads, is a source of complaint throughout the entire iron and steel trade. Copper, spelter and lead are again lower. Electrolytic copper is quoted at as low as 17½ cents, that quotation being 1 cent a pound under the figures at this time last year. Some business has been done with Europe, where stocks are said to be short, but domestic trade is light. Consumption here has declined, and it is stated that producers' stock are very heavy. In fact, now that quotations on some grades have receded below 18 cents, a lower level, somewhere in the neighborhood of 15 cents, is talked of. On the other hand, it would not be surprising to see a buying movement of some sort develop soon.

While very dull in view of a three-day holiday, the New York stock market is strong, and is disposed to respond to the influence of promised relief to the money situation from the United States Treasury. The prospective success of the new 4½ per cent. issue of New York City bonds was also a factor, and the general list was not influenced materially by the adverse position of the New York local traction combination. The bond market is in suspense, awaiting the outcome of the above municipal offering, and much irregularity and low prices have prevailed for the lower rate New York City obligations. Foreign exchange is lower, at 4.86.25, on better financial advices from European centers.

Trade at New York is irregular and there is general complaint as to collections. The dry-goods, wearing apparel and kindred lines of jobbing trade are relatively most active, but with building and allied lines rather quiet. Cotton goods lead in dry goods, with women's dress goods next. Silks are not as active as looked for. Men's-wear woolen fabrics shows light improvement. Discounting of dry-goods trade bills is less notable than some time ago. Trade in clothing is fair, hosiery men are well sold up, but cotton yarns are lower, with the decline bringing out some business. There is no export trade in cottons. Wholesale milliners are doing well. Jewelry manufacturers are doing a normal business, but diamonds are slow of sale and weak. Fresh arrivals of canned goods help the wholesale grocery trade, but coffee and tea are quiet. Leaf tobacco is in light demand, cordage is less active, and china, glassware, hardware, house furnishings, lumber and electrical goods are quiet. Metal prices are weak and lower. Machinery men report trade less active and complain of collections. Yellow pine lumber feels the effect of less active construction of large buildings and the cessation of some railroad work, and prices are lower. Collections in the building trade are poor.

There is rather more life in the demand for refined sugar and deliveries are larger. All reports point to an unusually light crop of fruit as a whole. Raw sugar has a stronger tone, on a decrease in the visible supply, less favorable European beet-crop reports and a renewal of the Brussels sugar convention until 1913.

Weather reports from the northwest were conflicting this week, though on the whole pointing to a less favorable situation in the northwest and in Canada, due to cold weather and rain and frost-damage reports from those sections. At one time wheat was up 2 cents per bushel, aided by poor reports from Germany and the United Kingdom, but the advance invited realizing, upon which almost the entire advance had been lost by Thursday. Corn was even stronger than wheat, advancing 4 cents from Friday to Monday on poor crop reports, fear of cold-weather damage and light movement of old corn. Later, heavy realizing, warmer weather and more liberal receipts caused a loss of 1 cent. Oats advanced a little early in the week, in sympathy with wheat and corn, but eased later, and speculative realizing, despite light receipts of poor grain, caused the loss of the early advance. Wheat is up 2 cents and corn 2 cents, while oats are ½ cent lower. Provisions were steady as a whole in sympathy with the strength of live hogs. Export trade has been fair for wheat this week. Flour has held last week's advance, and, in fact, added 5 to 10 cents on good export demand and scarcity of milling wheat, despite the larger movement in August, which offset the loss from a year ago in July. Cotton-seed oil is 2½ cents up on the week on poor crop reports from the southwest.

Cotton has reflected the growth of bullish feeling and active manipulation based on higher Liverpool cables, drought-damage reports from Texas, the reported turning from the bear to bull side of a leading interest, and strong demand for active cotton based on light movement of the new crop. The better tone of affairs in Wall street was also a help to the bullish side. Futures advanced pretty steadily from Friday to Wednesday, gaining 30 points to the latter, losing 7 to 10 points net on that day, but regaining it on Thursday, when 30 to 35 points net gain for the week were shown. Spots advanced 20 points in the same time.

Bank clearings for the week ending August 29 aggregate $2,214,173,000, 14 per cent. under last week and 25 per cent. below this week last year. Outside of New York exchanges amount to $948,473,000, 8 per cent. under last week, but 6.8 per cent. over the week last year.

Business failures for the week ending August 29 number 167, against 153 last week, 138 in the like week of 1906, 161 in 1905, 189 in 1904 and 162 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending August 29 aggregated 3,808,866 bushels, against 3,565,347 bushels last week, 5,081,999 bushels this week last year and 6,607,611 bushels in 1901. For the first nine weeks of the fiscal year the exports are 26,285,406 bushels, against 23,206,599 bushels in 1906-07 and 58,549,145 bushels in 1901-02. Corn exports for the week are 798,071 bushels, against 1,120,546 bushels last week and 361,461 bushels in 1906. For the fiscal year to date the exports are 12,630,576 bushels, against 6,129,075 bushels in 1906-07.

IN CANADA.

There is a large fall and winter trade doing in Canada, the crop outlook is good in the northwest, and immigration is heavy, but the tightness of money is a serious drawback to trade in all lines. Collections in the eastern half of the country are fair to good, but in the west general complaint of slowness is heard. Fall dry-goods demand at Montreal is better than expected, hardware is brisk and boot and shoe manufacturers are active. A large trade in millinery has been done at Toronto. Ontario crops have been saved in good shape, but collections from the west are slow. Harvesting has commenced in Manitoba, 20,000 harvest hands are said to be wanted, but collections are slow and money is tight. Lumbering and mining are active in British Columbia, but the salmon pack is light. Failures for the week number 29, as against 19 last week and 14 in this week a year ago. Clearings for the week aggregate $75,748,000, a decrease of 13 per cent. from last week, but a gain of 14 per cent. over this week a year ago.

TRADE REPORTS.

At New York nearly all departments of the dry-goods trade continue to transact a good business, cotton goods leading. Prices are strong. Dress goods are also in good request and liberal orders have been placed for spring delivery. Woolens for men's wear continue in fair demand, though it is not so active as the commission houses would like to have it. Business appears to keep up with corresponding periods of 1906, and in many instances it is in excess. Collections are not so good as they were. Large western houses have not been discounting as much during the past three weeks as formerly, which is believed to be due to the high rates of paper. City banks are placing money to the credit of their depositors at 5½ per cent., but the quotation for dry-goods paper generally is about 6½ per cent. The clothing trade reports a fair amount of business. Collections are still slow. Jobbers of hosiery and knit goods are sold up to about the limit of their season's capacity. Manufacturers of shirts, gloves and neckwear have obtained good early orders and will have to curtail some of their shipments, as they cannot fill all the orders received. Prices continue high and some classes of merchandise are scarce. In the cloak, suit and waist line there is a steady increase and manufacturers report good bookings for fall business. Out-of-town buyers are liberal in placing their orders, but collections are a little slow. Retail dealers are doing a steady business. Retailers have put forward the fall season's styles in men's hats, but so far business is only nominal. A number of millinery buyers are in town and wholesale milliners are doing well, but retail trade is rather dull. In jewelry conditions are encouraging, manufacturers are doing a normal business, and say stocks are pretty well cleaned up, but demand for diamonds is weak and collections are slow. Egg and butter receipts are moderate, demand good and prices advanced ½ cent. Cheese receipts are moderate and market firm. The wholesale liquor trade report large sales but poor collections. Conditions are apparently favorable for a good business in the retail grocery trade. The wholesale grocery trade is increasing with the arrival of fresh supplies of canned goods. Collections are somewhat slow. Coffees and teas are quiet, but an increase in fall orders is anticipated. Refined sugar trade is quiet. Leaf tobacco demand is light, but prices rule firm, manufacturers buying only as they need and anticipating lower prices, which do not seem near. Business among local cigar manufacturers is more active. Conditions are satisfactory in drugs and chemicals, except that collections are slow. Business in hard fiber cordage is not so active as it was in July. Demand seems to be on a diminishing scale. Manila cordage is in fair demand. Cotton yarn and warp are somewhat irregular, demand falling off considerably, and lower prices are quoted. In china, glassware, hardware, house furnishings and tin and enameled ware business is unusually quiet, and there are very few orders placed with manufacturers in these lines. Less activity is noted in the electrical trade, and some have reduced working forces, while collections are poor. Copper prices have been further

reduced, and consumers are buying only to cover actual needs. Pig iron is quiet, collections are complained of, and lower prices are looked for. Structural steel makers are busy, but collections are slow. The machinery trade reports a less active demand and also complain of slow collections. Business in real estate is slow in all branches, though there has been no falling off in prices, and brokers look for a revival of interest in the fall. Lumber for the construction of moderate-sized houses in the suburban districts continues brisk, with prices fairly steady. Conditions in hardwood are satisfactory and prices fairly firm. In yellow pine the falling off in large buildings requiring that stock and the holding up of more or less railroad work, owing to the tight money market, has resulted in a material falling off, while overproduction has produced a decline in prices. Brick and cement are in fair demand, with prices somewhat below those ruling earlier in the season. Collections in lumber and building material lines continue poor, but less renewal of paper is reported, and some payments are being made on account of paper under protest.

The following telegrams show trade conditions at the cities mentioned for the week ending August 30:

BOSTON.—Dry-goods jobbing trade is active and sales are larger than a year ago. Retailers are holding final clearance sales of summer goods and many are offering fall goods and apparel. The clearing up of the summer retail trade is generally satisfactory and a large fall trade is anticipated. Business in clothing and men's furnishings is active and conditions are favorable. Sole leather tanners have curtailed product and allowed hides to accumulate in the hands of the dealers. Sole leather is very strong, but hides are weak. General market is fine. Kid manufacturers are looking for increased demand in colors to take the place of quiet demand for blacks. Shoe manufacturers are receiving many rush orders, indicating that buyers have underbought and need goods at once to fill orders. The matter of price is still holding back business to some extent. Business in paper is limited. The market, however, holds firm and there are no indications of revision of prices in any line. Only a moderate business is doing in paper stock. The belief seems to be general that conditions will change for the better in September. Trade in paints, oils, glass and painters' supplies is quiet, with prices firm A fair business is doing in northern and eastern lumber. Southern lumber is a little more active, but not up to usual conditions at this time of year. Western lumber is quiet and prices continue high, especially in white pine. Business in iron and metals is quiet. In the general provision market the movement is light, but prices are well maintained. A record price for mackerel is a noteworthy feature in the fish trade, demand being far in excess of the supply.

PROVIDENCE.—Conditions in jewelry remain normal, with collections very fair. There is a moderate trade in iron and steel, and in the lumber market prices are high, with orders coming in rather slowly. Worsted goods manufacturers are busy, though woolens are in only fair condition. The machinery and tool trade holds good. General collections are fair.

PORTLAND, ME.—The season just drawing to a close has been a good one at the summer resorts. Railroads report heavy travel.

PHILADELPHIA.—Dry-goods jobbers report a fairly active market, but collections continue slow. Retail trade is dull. Wool shows little change, spinners as a rule buying only for immediate needs, but prices are firm. Textile manufacturers are fairly busy, but are running mostly on yarn contracted for, and new business in cotton yarns is quiet. Iron deliveries on old contracts are taking the major part of the product, and no stocks of consequence are being accumulated; notwithstanding, there is practically no selling. Prices are weaker and irregular. There is nothing to encourage buying, and the market is extremely dull. Monthly advancing prices of anthracite coal have stimulated buying somewhat, and trade is fair. The bituminous trade is emerging from a season of quietness with a somewhat stronger condition, and the prospects for a good fall business are encouraging. Hides and skins are weaker at lower prices, with demand light. Leather is slightly off, with fair demand, but no material decline in prices. Shoe dealers report a fair volume of business, and factories are reported fairly busy. Flour millers are holding quotations very firm in sympathy with wheat, and jobbers and consumers are consequently loath to buy, taking only what they actually need. Chemicals and dyestuffs are dull. Paints and glass are moving freely at good prices. Lumbermen report a slight falling off in the volume of business, with prices a trifle easier. Tobacco continues firm, with prices unchanged. Business in liquors is light. Prices of bonded goods indicate an advance, while spirits remain unchanged. An improvement in demand is anticipated in the course of the next month.

PITTSBURGH.—Quiet continues in pig iron, there being no sales worth mentioning and very little inquiry. Prices seem to be well maintained, everything considered, though consumers appear to anticipate a lowering of present quotations. In finished lines of iron and steel, while there is a fair inquiry, there is a noticeable let-up in the placing of new business. Manufacturers express confidence in the situation, but are unable to say how long the present halt in the buying movement will continue. Coke is in good demand and, if anything, is stronger. Spot quotations for pig iron at the valley furnaces are as follows: Standard Bessemer, $22.50; chilled basic, $21; No. 2 foundry, $22, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.75, and foundry coke, $3.25 to $3.50, at the ovens.

BUFFALO.—Wholesale, jobbing and retail lines report trade active. Building operations continue brisk, and iron industries report product in demand, but are behind on orders. All lines report collections very slow.

BALTIMORE.—Increased house trade in millinery, particularly with jobbers, finds business for August in excess of the same month of 1906. Merchants are inclined to buy conservatively, and jobbers are also holding credits well where a tendency to purchase beyond normal needs is shown. Stocks in some sections, however, seem to have been broken into more than in others, and, with favorable crop conditions, purchases in these sections have shown some increase. The outlook in the south, from reports made by merchants and salesmen, is quite encouraging, and an improved fall business is expected. Collections practically continue unchanged, and jobbers, as a rule, have shown indulgence where requested. Full confidence is expressed in present conditions. The dry-goods market continues firm, with demand active and a continued scarcity in some lines of staples. Trade in boots and shoes at wholesale is steady. Clothing manufacturers report a satisfactory volume of business. A feature of the week has been the large number of women buyers in the market attending the opening of the millinery season. Retail dry-goods trade is quiet. Shirt and umbrella manufacturers are very busily engaged, reporting business much in excess of August, 1906. There is no noticeable change in money, the supply not being equal to the continued demand. Receipts of Maryland leaf tobacco are considerably heavier, with prices on all grades firm and demand strong. There is a good demand for Ohio leaf. Official returns show an increase of nearly 10 per cent. over last year in the number of cigars manufactured. Butter is advancing steadily and receipts are light. City business with wholesale grocers is normal, with a continued improvement in out-of-town sales. Flour has advanced 20 cents per barrel, with higher prices expected.

CHICAGO.—Increased buying of goods is noticed among the jobbing houses, a larger number of buyers being in from the west, and purchases were of larger size, some taking heavier stocks than last year. There is a noticeable absence of purchases of new stocks, which isattributed to the high rates for money and uncertainty as to future business conditions. Trade with clothiers and shoe manufacturers is fair, but slightly under last year's. Specifications in the hands of steel manufacturers are liberal and mills are kept running, but new buying, outside of structural material, bars and plates is limited and sales of steel rails this season have been disappointing. Pig iron is selling only in small lots, and there is an absence of inquiries for deferred deliveries. Southern iron is lower and the market for northern is easy. While stocks have not been accumulating at furnaces, prospects are for a piling up in the future unless conditions change. Coke and coal are having a fair sale. Lumber is moving out in increased volume. Grocers are doing a moderate business, and the catalogue houses are increasing their sales. Railroads report a good traffic and have more cars to handle business than ever before. Butter and eggs are higher, and potatoes lower. Cattle and sheep are lower and hogs averaged higher. Receipts of cattle and sheep increased, and hogs decreased. Money is firm. Currency shipments are increasing. National and state banks show heavy decreases in loans, and large losses in deposits and cash resources from their May statement, but substantial gains as compared with a year ago. Collections are fair. Harvesting of spring wheat in the northwest has progressed fairly where not interrupted by rains, and it is expected that the greater part of the wheat will be cut as far north as the international line by the first part of next week. Recent frosts and local storms have injured all grain crops in North Dakota to a greater extent than previously reported, and there is some loss to spring wheat, oats and barley from shelling. Reports from the Canadian northwest are conflicting, temperatures have been too low and injury to the crops from frost has occurred, but the extent cannot be told for a few days. It is safe to say that the quality has been injured, but it is uncertain as to quantity. Threshing of barley and oats in the northwest has been delayed by rains. The corn belt is getting too much rain in some sections, but Nebraska, which has been short of moisture, had a good wetting. The Texas corn crop is made and will be moving to market inside of forty days. Reports from the corn belt generally indicate slow growth, owing to cool weather, and it is doubtful whether the full acreage will mature unless frost holds off until late in the season. Threshing returns on oats confirm previous reports of light yields. Pastures are in good shape, and feed generally is abundant. Farmers are selling grain moderately, considering the high prices being paid.

INDIANAPOLIS.—In certain quarters of Indiana corn is believed to have been damaged to some extent by heavy rains, likewise such wheat as has not yet been threshed. The tomato crop is so late that it is causing some uneasiness. The lateness is extraordinary, and if there should be an early frost it is feared the damage would be considerable. While the business done by local houses during the past season has, as a whole, been pretty fair, merchants in the smaller towns of the state do not report quite as favorably. A great number assert that business has not been at all good. Money is tight.

ST. LOUIS.—The influx of country merchants during the past ten days has been large, but while orders placed are of fair size, buying is along conservative lines. However, in nearly every line the volume of business equals, and in some instances exceeds, last year's at the same period. In clothing the demand is for better grades at advanced prices. Manufacturers of ladies' waists and skirts are running to full capacity and will be busy for several months. Lumber shows some improvement. Hardware and building materials are active at firm prices. The flour market is in better condition than it has been for years. Millers are sold ahead for several months. Prices are firm, with an upward trend. Export wheat and flour is very active at good prices. Collections, except in a very few sections, are good, and but few extensions have been asked. Demand for money on good commercial paper at 6 per cent. is heavy. Banks are taking care of old customers and are not inclined to buy much outside paper. Light rains and hot weather during the past few days helped corn, which gives every assurance of a large yield.

ST. JOSEPH.—The condition of corn in the greater portion of this territory could not be better. The wheat and oat crops have been harvested. The quantity is somewhat less than last year.

KANSAS CITY.—Jobbers, generally speaking, report an excellent volume of business. Retail trade is good. Money is in good demand at normal rates. Growing corn has made rapid progress with favorable maturing weather.

LOUISVILLE.—Business in all lines is quiet. Country merchants are just beginning to come to town, and a large number are expected during September. Whiskey orders are coming in satisfactorily. Retail business in most lines is quiet. Collections are fairly good, as a rule.

MILWAUKEE.—Weather conditions are somewhat unfavorable to outside lines, but, on the whole, trade is fairly satisfactory. Collections are fair.

SIOUX CITY.—Wholesale dealers report that trade exceeds last year's. Retail business is fair. Collections have improved. Grain is in stack and being threshed. Corn has received good rain, and with a late fall its prospects are good.

DAVENPORT.—Trade equals this week a year ago. The weather is generally cool, with heavy showers. A strong demand for money prevails and rates of interest are increasing. Collections are rather slow.

SIOUX FALLS.—Business is fair. Collections are very good. Favorable weather for the harvest and growing corn continues. Harvesting is practically completed. Threshing of wheat is now quite general. Reports as to quality and yield vary, but an average crop is indicated.

ST. PAUL.—Current business is quiet in dry goods, hats and caps and shoes. Salesmen are off the road and will meet the merchants at the state fair next week. Other lines continue very active. The present outlook for business is good. Merchants have been careful in extending credit, and now that there is a favorable prospect, in that the crop is better than was at first supposed, and as prices continue good, there will be as much money received as last year. Orders which were asked to be delayed pending harvest have nearly all been ordered shipped. Only a few have been scaled down and there have been but few canceled. Collections are being kept well in hand, the stringency of the money market inducing the use of considerable pressure in reducing accounts, so that money is coming in well for the season.

MINNEAPOLIS.—General business is satisfactory, and in some lines is very much in advance of last year. Present orders are excellent, and for the future are large. Collections are all that could be expected at this season. Orders for flour exceed last week, and improved conditions are looked for. Crop reports are very favorable and the harvest is progressing well.

OMAHA.—Trade is seasonably active. Collections are quiet. Money is in good demand. A general rain covering the state has benefited crops very materially. Corn in some sections had suffered considerably; the acreage is about 200,000 less than last year, and best authorities report that the crop will be much less than last year's. The wheat crop will be much better than anticipated, both in quantity and quality, and will probably be an average crop. The late spring checked the growth of oats considerably; the stand is poor and the heads failed to fill well. The crop will be quite short. The hay crop will average well with crops of previous years.

LINCOLN.—The recent rainfall greatly benefited corn and pastures. Collections are fair.

OKLAHOMA.—Cotton is doing well, with prospects for a good average crop. The large excess acreage of corn over former years will help cover losses by drought, so that a two-thirds crop will be realized for the whole state. Business is largely at a standstill, being affected by the approaching first state election, which takes place on September 17.

CHARLESTON.—Wholesale trade in all lines continues good. Collections are fair. Cotton is in good condition, and small bales of this year's yield have been received. Picking will be in full sway within the next two weeks. An average crop is expected for this state.

RICHMOND.—Wholesale dealers in notions and dry goods are busy with fall shipments, ordering has been liberal, and in volume the business in these lines slightly exceeds that of last year. Manufacturers of woodenware are active, orders are liberal, and in volume equal almost any previous period. Lumber generally continues to show a decline in price. The produce market is inactive. In North Carolina cotton maintains its prospect of an average crop. In Virginia the corn crop generally is good, while tobacco is not up to the average. Rain is badly needed in several sections. Retail trade is fair, but collections are not good.

AUGUSTA.—Retail trade is quiet and wholesale continues fair. New cotton is now on the market; prospects for a large crop are bright.

ATLANTA.—Business in most lines seems fairly active. The stringent condition of the money market is reflected in various ways, but merchants are optimistic over the favorable crop prospects and look forward to increased sales for the year. Collections are improving slowly. The cotton crop is in better condition than at this time last year; the plant is heavily fruited, and with a late fall the yield will be at least normal.

MACON.—Crops are suffering on account of drought. Trade is dull and collections are slow.

CHATTANOOGA.—Trade conditions are good and collections are fair.

MEMPHIS.—Retail business is dull. Wholesale trade is improving. Collections are slow in some lines but good in others. A good corn crop is practically made. Cotton making progress, and with late frost an average crop is anticipated.

MOBILE.—Trade in all lines continues active, and collections have improved slightly. The condition of cotton continues to improve and is opening up well.

MONTGOMERY.—Jobbers report trade fairly satisfactory, demand for staples being good. Retail trade is fair. Collections are poor. Several

bales of new cotton were received the past week. Cotton is reported in fair condition, but in some sections rain is needed.

BIRMINGHAM.—Iron is inactive. Collections are slow. Lumber is quiet.

LITTLE ROCK.—Trade in practically all lines continues fairly active, but collections are still slow. A few bales of new crop cotton have been received, but it will be about thirty days before the movement is general. The weather continues hot and dry and a general rain is needed.

NEW ORLEANS.—Retail merchants are doing a satisfactory volume of business. Jobbers are fairly busy with small current business, but are booking good orders for fall and winter shipment. Ideal weather conditions are improving all crops, and the outlook is encouraging.

FORT WORTH.—Cotton, and in fact all vegetation, is suffering for rain. Trade is quiet and collections are only fair.

DALLAS.—A large number of country buyers are now in the market and are buying freely, as a good fall business is being anticipated. Collections are fairly good. In the northern part of this district cotton is reported in good condition, but in the southern part, on account of the continued dry weather, considerable deterioration is reported. Rain is needed all over the district.

WACO.—Trade is fair. Collections are slow. Continued dry, hot weather is working damage to cotton.

SAN FRANCISCO.—Reconstruction work shows an increase. Business has improved, but collections are still slow.

SEATTLE.—All lines of trade continue active. Collections are good.

SPOKANE.—Early rains threaten considerable loss, as not over 50 per cent. of the wheat crop is harvested. General trade is good. Collections are fair.

TACOMA.—Better trade in hardware and dry goods is shown. Some grain is beginning to move to tidewater. Collections are fair.

PORTLAND, ORE.—The hop yield will fall far short of previous estimates, late weather conditions being the cause. Other crops are turning out well. Trade in all lines continues active, with satisfactory collection returns.

TORONTO.—Orders for fall and winter wholesale lines are heavy, and an excellent season's trade is looked forward to in every direction. From most parts of the country collections are fair to good, but from the west they are still slow. This fact, taken in connection with the general tightness of the money market, is the most serious factor to be considered at the moment. The volume of retail trade throughout the country does not seem to be in the least affected. In every direction there is expressed the greatest hope for the fall and winter trade, and in those lines in which orders for next spring are being placed there is also every evidence of confidence. It is reported that in no line will the end of the season find retailers' shelves heavily loaded. All lines of dry goods are moving well, and shipments are heavy. The millinery openings, which will take place here shortly, are expected to be more largely attended by out-of-town buyers than ever before. Orders already indicate an immense fall trade. A heavy trade is doing in all lines of groceries. The western demand and that from new Ontario is large. Shipments are large and they will continue so until the close of navigation. Stocks of canned goods are light, owing to the continued enormous demand. Prices on new pack goods are opening considerably higher than last year. There is also considerable firmness in nearly all other lines. The trade in hardware lines is brisk; prices are steady to firm. Country trade is quiet on account of the harvest. Crops in nearly all parts of Ontario are reported as being well saved. The country has recently suffered through lack of rain.

MONTREAL.—General business moves satisfactorily. On every hand there are still to be heard complaints regarding the tight money market. The situation in this regard shows little or no improvement, while the need for money upon every hand is as great as it ever was. A feature of the situation that has been put forward recently is worthy of attention. At the present time there are arriving in Canada about 20,000 immigrants per month. These new citizens are making great demands upon Canadian manufacturers and merchants, the filling of which make necessary great sums of money not at present available. Collections are not coming forward well. Wholesale trade continues brisk in all lines. Dry-goods houses report fall business better than expected. There has been some improvement in remittances from some districts, although those from the west are still slow. Orders for fall and winter goods continue large. Hardware lines are moving briskly and values hold firm. Business in sporting goods and small wares is heavy. A good trade is moving in groceries. Values in all lines are firm. The western demand is exceedingly heavy, and this is tending to keep supplies of some lines light here. Boot and shoe manufacturers are busy on fall lines; they report retailers' stocks light and a good trade in view. It is said the effect of the increase of the tariff on high-grade shoes has not been as marked as was expected. Leather is steady and quiet in tone. Country trade is moderately active. Butter and cheese hold firm on good export demand. Hides are steady.

VANCOUVER-VICTORIA.—There is an excellent movement in trade along the coast. Demand for wholesale goods from the interior is heavy and collections are generally good. The lumbering and mining industries are busily engaged, but the catch of salmon this season will be very light. The shipping trade is active, and there is a steady growth in the trade with the Orient.

WINNIPEG.—Wholesale trade is moving briskly and orders for fall and winter goods are heavy. Country trade is a little quiet on account of harvesting operations. Harvesters' excursions are coming into the country, and as there is a demand for well over 20,000 laborers, it is evident a large crop is awaiting harvest. Every confidence is expressed regarding the outlook for fall business. Collections are still slow and money holds tight. Crops are good in most districts, but are late in Saskatchewan. Harvest has commenced in Manitoba and will be general in two weeks. Throughout the west constant rains have helped crops, and conditions have much improved of late. Prospects are bright for good grades of grain.

Money Market.

The intelligence that the Secretary of the Treasury had decided to increase the government deposits in banks, and that the process might be instituted forthwith, with perhaps special reference to the depositary institutions at New York, naturally had a good effect on money market conditions and sentiment. Another circumstance which had some influence was the simultaneous calls on the national and state banks for a statement of their condition on August 22. Such calls had been anticipated, and preparations for them had probably more or less to do with the recent unwillingness of the banks to put out funds on time. In addition to this, the financial position abroad showed improvement, though not to such an extent as to warrant expectations of any large lending of foreign money in the New York market. It was noted that another "special" shipment of $500,000 gold was made to Germany and that a similar amount was sent to Canada, while on the total movement there was a net loss of about $2,000,000. The market after the first days of the week showed, however, a tendency to become easier, and offerings of time money became more liberal. Under these circumstances, rates for five to six months' funds declined from 7 per cent. to 6½@6¾ per cent., and short-term arrangements were quoted at 5½ per cent., the amount of business done on such terms naturally showing an increase. Call money was easy at 2½@2¾ per cent. In the last days of the week the market showed a somewhat harder tone, partly in consequence of the closing of the stock market for the three days' holiday from Friday to next Tuesday, the quotations for long-time loans being again 7@6½ per cent., while call money renewals advanced to 3@4 per cent. Commercial paper was practically unchanged, the offerings being light, while the buying demand continued to be extremely small and scattered, so that but little actual business was reported at the quotations, which were 6½@7 for double names.

New York Banks.

Stock market liquidation showed its effects in the form of a decrease of $8,070,100 in the average of loans in last Saturday's bank statement. Specie and legal tenders together displayed a decrease of $2,086,100, which was nearly half the amount indicated by the estimates of the actual loss of cash for the week, a result probably due to the system of averages. On the other hand, the shrinkage in deposits was $11,073,700, which was nearly $1,000,000 more than the aggregate loss in cash and loans. The result, however, was a reduction of the amount of reserve required, so that the surplus reserve increased $582,325, the statement, therefore, being regarded as more favorable than had been anticipated. The figures of the statement compare as follows with those of the preceding week:

	August 24	August 17	Changes
Loans	$1,088,152,000	$1,096,222,100	D. $8,070,100
Specie	203,036,830	203,988,300	D. 951,500
Legal tenders	69,035,500	70,170,100	D. 1,134,600
Deposits	*1,048,383,600	1,059,457,300	D. 11,073,700
Circulation	50,165,400	50,201,000	D. 36,400
Total reserve	272,072,300	274,158,400	D. 2,086,100
Reserve required	262,095,900	261,864,325	D. 2,768,425
Surplus reserve	9,976,400	9,294,075	I. 682,325

The following compares the statements for the respective weeks in 1907, 1906 and 1905:

	Aug. 24, 1907	Aug. 25, 1906	Aug. 26, 1905
Loans	$1,088,152,000	$1,071,132,800	$1,144,607,900
Specie	203,036,830	186,032,800	219,450,300

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending August 29 shows an aggregate of $2,214,173,000, as against $2,585,406,000 last week and $2,978,030,000 in the corresponding week last year. Canadian clearings for the week aggregate $75,748,000, as against $88,013,000 last week and $66,160,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	August 29	Inc.	Dec.	August 22
New York	$1,265,700,000	....	39.3	$1,548,467,000
Chicago	214,074,000	18.2	....	220,048,000
Boston	122,212,000	....	6.0	150,396,000

† Not included in totals because containing other items than clearings. § Not included in totals because comparisons are incomplete. * Last week's. ^ Corrected returns; a telegraphic error made last week led us to place the figures at $8,316,000 and to credit Cleveland with a decrease of 43.8 per cent. from the corresponding week in 1906, whereas it should have been an increase of 23.7 per cent.

Foreign Exchange.

In the earlier portion of the week the foreign exchange market at New York was rather quiet, with some disposition to become heavy, there being both a slightly better supply of commercial drawings and a rather slack inquiry. Some buying of cables was occasioned by the London fortnightly settlement, and a decline in sterling rates at Paris to 25 francs 16 centimes occasioned a moderate demand for francs. As the week advanced the market, however, became intensely dull up to Thursday, when the tone became stronger and the dealings assumed larger proportions. Another engagement of $500,000 gold for shipment, presumably to Germany, was arranged, but this, as was the case with the transactions of the week before, was undoubtedly a "special" arrangement not depending on the actual conditions regarding exchange. On Friday the market was again heavy, the offerings of commercial bills showing a further increase, some finance bills also making their appearance.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Aug. 24	*Aug.* 26	*Aug.* 27	*Aug.* 28	*Aug.* 29	*Aug.* 30

4.82.75 @ 4.82.85	4.82.75 @ 4.82.90	4.82.90 @ 4.82.75	4.82.80 @ 4.82.90	4.82.75 @ 4.82.85	4.82.20 @ 4.82.40

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.95; commercial bills, 4.81¾@4 82¾; francs, 5.20 less 1-32@5.16⅞ less 1-64; reichsmarks, 94 1-16@94 15-16 less 1-64.

The Bank of England made no change this week in its discount rate, which remains at 4½ per cent. Its weekly return on Thursday showed an increase of £831,827 in gold held, and the proportion of its reserve to liability rose from 48.20 per cent. to 49.40 per cent. The statement also indicated a decrease of £465,000 in the loans to the market. In the open market at London call money is 2¼@2½ per cent. and discount 4¼@4⅜ per cent. The Bank of France reported for the week a decrease of 3,850,000 francs in gold. Its discount rate is unchanged at 3½ per cent., the Paris market quotation for discount being also 3½ per cent. At Berlin the bank rate is 5½ per cent. and the market 4⅝ per cent.

New York Securities Market.

While the stock market at New York was a rather dull and narrow affair, with considerable irregularity in the movements of prices, there was, nevertheless, a somewhat more cheerful tone and an increased disposition on the part of the professional traders to consider that liquidation was over for the present, and that the adverse political and other factors had lost much of their force. One of the chief reassuring incidents was the announcement that the Treasury had decided, as is explained in detail elsewhere, to afford the money market a substantial measure of assistance during the crop-moving season. Another matter of importance was the announcement that the city of New York would offer $40,000,000 of bonds bearing 4½ per cent. interest, and the accompanying reports that a syndicate of large bankers might be organized to bid for the bonds on September 10. These last intimations were apparently without adequate confirmation, but it is generally thought that the issue will be a success, and thus relieve the apprehensions created by the practical inability of the strongest municipality in the country to dispose of its 4 per cent. obligations under the existing money conditions. In consequence of the announcements regarding the aid to be given to the money market by the Secretary of the Treasury, time loans were easier, and the offerings of money in that form showed an increase, though rates became somewhat harder on Thursday, mainly in consequence of the closing of the Stock Exchange for an extra holiday on Saturday, making, with Labor Day on next Monday, a three days' suspension. The fact that the European financial position has assumed a better appearance was not without some influence, and the stock and money markets seemed disposed to ignore the shipment of $500,000 more gold to Germany and the transfer of an equal amount to Canada. Some attention was also paid to the speeches made by Governor Hughes of New York, criticising hasty methods in legislation or administration in connection with business, as well as to the opinions of the federal judges in North Carolina and Alabama, wherein the powers of the national courts in such matters as the controversies which have arisen in those states are firmly upheld. Among the chief adverse influences was the further revelation of unsoundness in the organization and financing of the New York traction merger, the traction group, despite a recovery in the prices for the Interborough-Metropolitan stocks and bonds, being very nervous, and one of them—Third Avenue stock—showed a decidedly sensational break. This matter, however, hardly affected the general list, which exhibited a series of rallies on the short interest, followed by moderate declines, the end of the week being marked by holiday conditions and pronounced dullness, the close on Friday showing, nevertheless, a decided advance.

Trading was mainly confined to a few leading issues, Reading, Union Pacific and Amalgamated Copper being the most prominent. New York Central was also something of a feature, the report that the 6 per cent. dividend rate would be lowered causing it to break through par, though it recovered to 105 on more reassuring talk from insiders. The reduction of the Southern Railway preferred dividend last week seemed to have been discounted by the previous decline in those stocks. Erie developed much weakness on the uncertainty about the dividends on its first and second preferred shares, but when it was announced that the full rates would be paid in warrants or interest-bearing scrip, prices became more steady, although there is much criticism of the matter, and it may be noted that the preliminary trading in the warrants on the curb puts their market value at around 55. The declaration of a dividend of $1 per share, or, in other words, 1 per cent., on the Great Northern ore certificates led to an advance in those securities, Mr. J. J. Hill being quoted as stating that the dividend is to be paid from other receipts than the rentals from the United States Steel Corporation for the ore lands.

Boston Stock Market.

Wool Markets.

There is a better feeling in the market, manufacturers have been buying more freely, and there has been a free movement of wool during the past week, the improvement in the financial situation being the main factor. At the same time the buying is still on conservative lines, and of wools only needed for almost immediate use. There is still a shortage of fine staple wools, the feature of the week's trading having easily been a lot of about 2,000,000 pounds staple Oregon at 23@24 cents. This shows that no concessions are being made to move the fine wools, which are scarce and in demand. Low wools are still very quiet. In addition to this large lot of Oregan wool, sales of the week included small lots of territory wools, Wyoming, Idaho and Montana fine and staple, three-eighths and half blood. Idaho staple brought 24@25 cents. Texas twelve months' sold at 26@27 cents, with eight months' at 23@24 cents. Some northern California changed hands at 27@28 cents, with middle counties at 22@24 cents. Fine washed delaines are scarce, with a few lots selling at 38½ cents, very choice bringing 39 cents. Unwashed delaine was active at 31 cents, XX Ohio at 35 cents, half blood Ohio at 34 cents and half blood Michigan at 32 cents. Three-eighths blood fleeces sold at 32@33 cents. Foreign wools are very quiet, as the fine wools are very scarce and other grades are not wanted. Sales are reported of fine Australian merino at 86@87 cents for a very small lot, and twenty-five bales of South American high quarter at 37½ cents. There is very little interest in the London sales, which will open September 24, as little wool suitable for this country will be included in the offerings.

Boston Shoe and Leather Market.

Sole leather manufacturers have been curtailing product, and desirable lines are closely sold up, some in advance. Grain leathers are holding their own. Finished calfskins are fair and in good demand. Kid manufacturers are looking for a good run on colored goods next year, and feel encouraged as to the outlook. Hides are said to be in good supply, larger than for two or three years at this time of the year. Shoe manufacturers are receiving numerous moderate orders with request for immediate shipment, indicating that wholesalers are carrying small stocks in certain lines and that their own orders are exceeding their earlier expectations. While this is always true with some dealers, it appears to be applicable to an unusually large number at the present time. Shipments declined this week. The *Shoe and Leather Reporter's* statistics are as follows: Last week, 94,980 cases; preceding week, 98,979; last year, 100,090; total for 1907, 3,218,775; total for 1906, 3,356,721; decrease, 137,946.

AFGHANISTAN.

Special Agent W. A. Graham Clark, in pursuing investigations in India, penetrated the "Buffer State," Afghanistan, and furnishes an interesting report in relation to the commercial awakening that is stimulating the people of that country. Under date of June 22 Mr. Clark writes:

"Afghanistan is the only independent kingdom of central Asia, and is the section that is most likely to require foreign goods at an early date. It is usually known only as a wild, savage country, but under the progressive rule of its present Amir and his father such encouragement has been given to industrial development that the country is destined to rank much higher in the future, and is worthy of careful study.

"Afghanistan, the Switzerland of Asia, is bounded on the southeast by India and Baluchistan, on the west by Persia and on the north by Asiatic Russia, while a strip of land, like an outheld sword, projects between India and Russia in the Pamirs and touches Chinese Turkestan to the northeastward. Physically it has been described as a star of valleys radiating around the great peaks of the Koh-i-Baba, and everywhere bounded by steep and rugged mountains. The three largest valleys are those of the Oxus, the Helmand and the Kabul rivers, the latter being a main tributary of the Indus. Throughout its whole extent Afghanistan is a rough, mountainous country, but is broken up by elevated, flat bottom valleys. The Afghans number somewhere between 5,000,000 and 10,000,000.

"When Abdur Rahman came to the throne, in 1880, the country was disunited and many tribes acknowledged no ruler but their own chiefs; but he curtailed the power of the mullahs, subdued the rebellious tribes with a heavy hand, protected the caravans of trade, and made travel safe by making every district responsible for any disturbance within its bounds. He built forts, raised a well-equipped standing army on the European model, and provided laws and fixed taxes. He cautiously began to introduce foreign goods and to establish manufactories. This policy is being continued by his son Habibullah. The first establishments were all for hand manufactures, but small and then larger power equipments have been imported. To-day at Kabul there are a few engines and boilers of 100 horse power or over, which were transported hither over mountain passes at great labor by camels, donkeys and coolies, and which are now operated by Indian and Afghan workmen. Within the last fifteen years many new industries have been started in Afghanistan, especially at Kabul. Englishmen and occasionally Russians are brought to start the enterprise and teach the trade, and as soon as they do so are replaced by the natives.

"The first and most important works planned were those for making war materials, guns, rifles, cartridges, etc. The first rifles were made by hand, but cannon are now made by machinery, being cast, bored and rifled at Kabul. The Afghans are fairly well supplied now with breech-loading guns of the most recent Nordenfeldt, Hotchkiss and Krupp patterns; also Maxim, Gardiner and Gatling guns, some of which they bought, some were given them by the government of India, and some were made at Kabul. In the military line the Afghans now also have machine factories for making various standard rifles, shells and cartridges, percussion and time fuses, powder and shot, revolvers, swords and lances.

"Next to machinery for making war materials the Amir is reported as being most interested in machinery for mining and extracting ores, and quite a little mining machinery has been brought in during the last few years, and much more will be bought. The following are some of the industries that are being started or fostered in Afghanistan: Machine shops, boot and shoe making, soap and candle making, Persian and Indian carpet weaving (both hand and machine), electroplating and gilding, brickmaking, stone inlaying, enameling, paper making, glass making, sawmilling, oil mills, acid making by machinery, bookbinding, biscuit and cake making, wine distilling, etc. There are now at work, besides boilers and condensing engines of 100 horse power, 28-foot lathes, heavy steam hammers, stamps and dies for making coin at the Kabul mint, and a traction engine for hauling heavy guns.

"The mass of the people are still agricultural and pastoral. Irrigation is extensively practiced by means of short canals from the rivers and mountain streams. Some of the streams that rise on the Koh-i-Baba, and that promise to be large rivers, have their waters so diverted for irrigation that they are dried up before they get out of the country. The curious Persian well system of conveying water is also used.

"There are two harvests every year in most parts of the country. One is sown in the end of autumn and reaped in summer, consisting of wheat, barley, peas, beans, etc. The other is sown the end of the spring and reaped in autumn, and consists of rice, millet, Indian corn, etc. Wheat is the most important, being the main food crop of the people. Tobacco, madder, lucerne (for cattle food), lentils, etc., are also grown. Turnips, beets and carrots are the most common vegetables. Afghanistan is celebrated for its fruits, especially pomegranates, melons, apricots, quinces, grapes and figs, and a large trade is carried on with India in dried fruits. The little wooden boxes of grapes and other fruits sold at the railway stations in India are from Afghanistan.

"The oxen, and to a smaller extent the water buffalo, are used for plowing. The plow is very primitive, and in many cases only a sharpened tree fork, but usually has a native forged iron point. On small plots on hillsides women are hitched to the plow instead of oxen.

"The money of the country is now stamped by machinery instead of casting and coining by hand, as was done up to about 1890. The copper coins are the penny and two-pence; the silver coins are tongas (one-third of a rupee), kirans (half a rupee), the rupee and five-rupee pieces. This last is a large coin 1¾ inches in diameter. The rupee of India is equal to 16 pence; the rupee of Afghanistan, which contains 6 to 10 per cent. copper, is officially reckoned at 12 pence, or three-fourths of the Indian rupee. The present exchange rate, however, as given by a bank at Peshawar, was only 58 Indian rupees for 100 Afghan rupees.

"The government transacts its foreign business through the English banks at Peshawar and Calcutta, but is understood to be planning a paper currency based on the amount of coin in the treasury. The government has no national debt, but also no national credit. In many parts of the country money is little used. Cotton cloth and sheep are the means of exchange, and taxes are paid in kind.

"Afghanistan may some day be one of the world's great mining districts. It is known to have mines of rubies, topaz, lapis lazuli, marble and other stones; iron, lead, copper, antimony and other metallic ores; sulphur and several of the earthy alkaline and metallic salts. Coal is also found, and is believed to be extensive near the iron mines. The lead, iron and precious stones mines are partially worked by the government with modern machinery, but the mining of the country is mostly carried on by very crude processes, and the bulk of the mineral wealth is as yet not touched. According to the few European geologists who have had access to the country, the mineral deposits of various kinds are rich and extensive, and there are to be found both gold and silver in paying quantities. The Amir continues to gradually purchase mining machinery as he has funds, and there should be an opening here for American machinery. In addition to large coal, iron and other mines, Afghanistan has numerous waterfalls available for power. If the government would grant railroad and mining concessions to foreigners, the country would develop rapidly, for its mines alone would attract many prospectors, and if found to be as extensive as currently believed, much capital would follow. The government and people, however, are united in opposing any concessions to foreigners, or even to allowing a white man to take up residence in the country, as they believe it would eventually result in the white men dominating and controlling the country.

"Afghanistan now has a regular frontier customs service, and there are levied customs duties of 2½ per cent. on everything exported or imported. The policy of the present government is to facilitate trade, but as soon as an article can be made at home, to altogether prohibit its importation or levy very high duties. The tendency is toward a protective tariff whenever anything is found that may be produced by local effort and enterprise.

"The exports are wool (ordinary white), the fine black sheepskins known as 'Astrakhan,' horses, raw silk, madder, asafetida (used for cooking purposes in India), opium, tobacco, rubies, gold, lapis lazuli, various kinds of fruits, Persian carpets, ghee (clarified butter), skins, etc. The imports are arms and ammunition, piece goods, calicoes, muslins, chintzes, merinos, woolen and broad cloth, silks, indigo, salt, drugs aud patent medicines, knives, scissors, thread, paper, machinery, ironware, etc.

"At present, with the exception possibly of some drills from Bombay, and revolvers, no American goods go to Afghanistan, but in both these instances they are reported to prefer the American article. With reference to American manufactures that could be sold to Afghanistan may be mentioned the following: Cotton piece goods, especially drills, prints and calicoes; revolvers; machinery for making guns and ammunition; mining machinery; electrical machinery; lathes and machine-shop supplies; engines and boilers; iron and steel ware; looking glasses; clocks and sewing machines.

"In regard to articles mentioned above, such as mining and electrical machinery, it is probable that the government will be the only purchaser, but they are yearly expending sums for such foreign purchases. The Amir has a business agent with the government of India at Calcutta and an agent at Peshawar."

THE GOLD MINES OF THE RAND.

"It is interesting to reflect that hardly more than two decades have elapsed since the main reef of the Witwatersrand was accidentally discovered," says the New York *Journal of Commerce*. "Gold was actually produced in the Transvaal in 1884, but the value was a mere paltry £10,000, and even three years later the output had hardly more than trebled. Then, in 1887, owing to the finding of the Rand field, the value suddenly rose to £169,000, and from that time the industry increased by leaps and bounds, despite numerous retarding influences, until last year 5,795,267 ounces of fine gold were realized, of the total value of £24,616,704. And notwithstanding trouble among the miners and the ever-present uncertainty of labor, that total will probably be surpassed this year, in view of the fact that the yield for the first five months was valued at £11,189,676.

"To-day there are seventy-six producing gold mines in the Transvaal, and of these forty were able to declare dividends, only three not belonging to the Witwatersrand area, the dividends for which represented £3,127,983 out of the sum previously mentioned. The highest dividend declared was that of the Ferreira, namely, 150 per cent., and next came the Crown Reef with 110 per cent., the Crown Deep with 50 per cent., and the Geldenhuis

Estate with 40 per cent. The largest amount distributed for an individual mine was £275,000, representing 10 per cent. on the issued capital of the Robinson.

"Since 1887 Transvaal gold companies have distributed £42,409,571 in dividends, and of this £42,332,414 has been paid in connection with the Witwatersrand mines and the principal outside company, the totals for the Rand and this one mine since the Transvaal became a British colony being as follows:

1902	£2,121,126	1905	£4,832,436
1903	3,345,502	1906	5,739,161
1904	3,877,624	1907 (six months)	3,161,449

"Only once before the war did the aggregate of the dividends exceed three millions, and that was in 1898, when the total sum was £4,848,238.

"From a contemplation of dividends it is interesting to turn for a moment to the output of the colony, now the largest gold-producing center in the world. As stated, the precious metal was mined in 1884, but it was not till 1887 that the Witwatersrand production began and thereafter so profoundly affected the welfare and destiny of the colony. Thanks to the Witwatersrand, the Transvaal's total output of gold to the end of May last was 42,582,146 ounces, of the value of £180,877,382. To show exactly what is due to the Witwatersrand it will suffice to say that the Rand's share from May, 1887, to May, 1907, inclusive, was 40,323,400 fine ounces, of the value of £171,282,915.

"As compiled from government blue books, the yield of the Transvaal for the various years has been as follows:

	Fine ounces	*Value*
1884	2,377	£10,096
1885	1,415	6,010
1886	8,171	34,710
1887	39,880	169,401
1888	227,749	967,416
1889	352,910	1,490,568
1890	440,152	1,869,645
1891	688,440	2,924,305
1892	1,069,058	4,541,071
1893	1,290,218	5,480,498
1894	1,805,000	7,667,152
1895	2,017,443	8,569,555
1896	2,025,510	8,603,281
1897	2,743,521	11,653,725
1898	3,823,359	16,240,630
1899	3,637,714	15,452,025
1900	348,761	1,481,442
1901	258,032	1,096,051
1902	1,718,619	7,301,501
1903	2,972,896	12,628,657
1904	3,773,519	16,028,883
1905	4,999,549	20,854,440
1906	5,795,267	24,616,704
Total	39,947,870	169,687,706
1907 (five months)	2,634,276	11,189,676
Grand total	42,582,146	180,877,382

"As the record of a great industry these figures are certainly remarkable, and given favorable conditions in regard to the labor supply, there is no reason why in the next few years they should not become even more remarkable. This will become apparent when it is stated that, apart from producing and developing mines, there are in the Witwatersrand alone over one hundred mines which are not working at the present time. Two years ago—according to the latest official return—the number was 115, and in respect of these the issued capital amounted to nearly £26,000,000. Since that time the position has not appreciably altered. In other parts of the colony sixty-eight mines were not being worked and their issued capital came to nearly £9,000,000. Altogether, it may be added, the Transvaal has 311 gold mines with an issued capital of £88,112,818.

"Unfortunately the immediate outlook is causing much anxiety to leaders of the industry, primarily because the government has decided that 16,000 efficient Chinese mine workers must be repatriated this year. Unless, therefore, a sufficient supply of unskilled native labor can be obtained to replace the coolies—and that is by no means certain—an era of contraction rather than one of expansion must begin, for until the labor question is definitely settled and a continuous and sufficient supply of Kaffirs is assured, it is hopeless to expect the influx of the capital which is so much needed for the further opening up of the industry.

"One other fact in connection with the industry is worth noting, and that is the depreciation which of late years has taken place in the market valuation of Transvaal gold shares. On December 31, 1904, the shares of 163 Transvaal gold-mining companies and finance companies stood at a total market valuation of £276,000,000, while a year later this figure had become reduced to £170,000,000. During 1906 there was a further fall in value of £35,000,000, bringing the market valuation at the end of the year to £135,000,000, of which £70,000,000 represented the crushing Rand gold-mining companies. This serious drop, it has to be noted, occurred side by side with an uninterrupted advance in the industry, and unless difficulties are overcome will probably be accentuated before the close of the present year."

Remington Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 7, 1907.

There appears to be a high degree of confidence in financial circles that the subscription for the $40,000,000 of New York City 4½ per cent. fifty-year bonds on next Tuesday will be a success. Rumors as to the formation of a banking syndicate continue to circulate, but are, it must be admitted, somewhat indefinite. A story, however, has found circulation that some leading bankers and certain life-insurance institutions stand ready to guarantee the subscription for such part of the loan as is not taken by the public at large. But all such reports are apparently unofficial, and their reliability can only be tested by the actual result. The principal feature in the matter is, however, the confidence, which finds universal expression, that the new issue will be readily absorbed, and that not only may the city obtain a premium above par for the bonds, but the larger subscribers will in all likelihood be able to resell them at a substantial profit within a short time. One feature in the matter which has attracted not a little attention is the unexpected interest which is shown in the offering abroad. It would seem that the new bonds are regarded in London and in Paris also as attractive, and it is stated that there is a likelihood that foreign subscribers may obtain not a small amount of the issue. The circumstances, in fact, are favorable for the city's marketing the whole of the amount, if, indeed, it should not be oversubscribed, and the matter accordingly has been an element of considerable importance in creating the better feeling in the money and stock markets, although pending the actual outcome of the subscription, the older 3½ and 4 per cent. bonds of the city have been irregular.

If the city of New York does not ultimately secure an unobjectionable charter, it will not be for lack of persistent revision. It is only six years since the last general revision of the charter, and a commission to revise and redraft that instrument has again begun work. The members of the commission were appointed under the provisions of what is known as the Page bill, which became a law at the last very busy session of the state legislature. The commission is expected to present its report with suggestions as the amendment of the charter to the next legislature. The time at its disposal is short enough and its sessions are likely to be busy ones. Its membership includes the two principal city officers, the mayor and the comptroller, with several others whose experience in the municipal service should qualify them to deal intelligently with some of the peculiar problems of city government. The commission organized on Saturday last, electing as chairman Mr. William M. Ivins, who has heretofore held high office in the city government and has for many years devoted much attention to municipal affairs. His last prominent appearance in local affairs, it may be recalled, was as a candidate for the mayoralty at the election of 1905. At the meeting on Saturday a committee on plan and scope was appointed, whose report will doubtless precede any steps of consequence in the work of revision.

Among the notable diplomatic achievements of the time must be mentioned the signing of the recently concluded convention between Great Britain and Russia, which, it is understood, regulates the respective interests of the two powers in relation to Tibet, Afghanistan and Persia. The precise terms of the convention have not yet been disclosed, but in a general way they are believed to guarantee the maintenance of the present position of Afghanistan and Tibet, each power agreeing not to endeavor to secure any advantages in those countries that might operate against the interests of the other. In Persia an effort is made to fix definitely the spheres of influence of the two powers, Russia maintaining her position in the north, while Great Britain retains hers in the south of that country. The principal benefit of a general nature to accrue from the agreement will be the building of a railroad along the Persian gulf. The treaty is generally regarded as a strong step in the direction of insuring the security of the Indian frontier, and from that point of view it is welcomed in Japan, whose share of responsibility in that direction, arising out of the Anglo-Japanese alliance, is thereby lightened.

Further discussion seems to have been had this week over the fisheries modus vivendi. The matter was under consideration by the Newfoundland Cabinet on Saturday, when it was reported at St. Johns that it had been arranged that the United States fishermen should abandon Sunday fishing and the use of purse seines in Newfoundland waters, though their right to hire colonial fishermen outside of the three-mile limit was insisted on. The colonial government was, as it appeared, opposed to this latter contention. The prolongation of the discussion over the subject at London seems to have been mainly due to the consideration given to proposals by the Newfoundland Premier, who was earnest in striving to have a substitute for the modus vivendi adopted which would not involve any displacement by treaty provisions of the legislation adopted by the colony. The latest information available seems to indicate that the present modus vivendi, modified in some particulars, will be renewed for the present season.

It appears from the official statement issued by the Treasury Department that the total amount of money in circulation on September 1 was $2,789,201,620. This represents an increase of over $7,800,000 for the month. The most noteworthy changes were decreases of over $5,600,000 in gold coin and of over $3,300,000 in silver certificates, and increases of over $13,400,000 in gold certificates and of nearly $1,400,000 in United States notes. Comparisons with the corresponding date last year cannot be profitably made from the figures given in the statement, owing to the fact that while a reduction is made in the figures for September 1 of this year, in accordance with the revised estimate of the Director of the Mint as to gold stocks, that reduction is not made in the figures as to circulation for the corresponding date last year, which are given unchanged. On the basis of those figures there has been an increase of only about $22,200,000 in the total amount of money in circulation, while gold coin shows a decrease of over $115,700,000. Of course, as was remarked in these columns some weeks ago, such a comparison is not representative of real conditions, and in order to arrive at a true basis for comparison, it would be necessary to deduct $135,000,000 from the estimate of circulation outstanding on September 1 of last year. If that be done we find that instead of the decrease in gold coin above noted, there was an increase of over $19,000,000, while instead of the small total increase mentioned, there was a real increase of over $157,200,000. In like manner, the per capita circulation for the beginning of the present month, viz, $32.32, represents a real increase instead of a decrease, as compared with the amount given for the like date a year ago.

A small surplus for the month of August has reduced the deficit shown in the Treasury balance sheet at the end of July. Government receipts for the month just closed amounted to $58,226,281, an increase of a little over $2,300,000 as compared with those for July and of over $2,200,000 as compared with those for the corresponding month of last year. The expenditures amounted to $54,775,000, a decrease of over $12,000,000 as compared with those for the preceding month, but an increase of over $6,900,000 as compared with those for August of last year. The surplus for the month amounted, as will be seen, to a little over $3,450,000. The receipts for the two months of the fiscal year which have elapsed amounted to $114,132,746, an increase of over $5,800,000 as compared with those for July and August, 1906, while the expenditures amounted to $121,288,345, an increase of over $7,600,000 as compared with the corresponding months of last year. The surplus for the two months amounted to over $7,450,000, which is about $2,100,000 more than the excess of receipts at the end of August last year.

Less interest seems to be felt in the elections now in progress in Russia than was shown to either of the preceding contests for the choice of national representatives. The elections now being held are preliminary ones, in which delegates to the provincial electoral colleges are being chosen. Those colleges will meet in a short time to choose representatives to the third Duma, which will open two months later, namely, on November 14. In part the present lack of interest is due to the fact that a national representative assembly has not now the charm of novelty, the coming Parliament being the third, and in part to the fact that the recent changes in the electoral system will result in a decline of the strength shown by the Liberal and Radical parties in the preceding Dumas. The members of those parties have declined to follow the policy of holding aloof from the elections, but their participation has no longer in it the element of enthusiasm which was marked in the former campaigns. The general belief is that while progressive views will not lack for exponents, even among the landowners who may be chosen, the coming Duma will be more moderate in its attitude than either of its predecessors. Already, it may be remarked, political prophets are predicting that a source of weakness will be found in the new body in the lack of acquaintance with the working of parliamentary institutions, as well as of party discipline on the part of the conservative elements, upon whom the burden of carrying on the experiment will be thrown.

AUGUST AND EIGHT MONTHS' FAILURES AND LIABILITIES.

August failure returns to BRADSTREET'S show strikingly little effect of the depression in security markets and of the stringency in money during that month. Thus the number of failures is, next to August, 1906, the smallest reported in that month since 1893, while the liabilities are considerably smaller than in August, 1906, a month notable for the small number of casualties, but for the heavy volume of liabilities of suspending concerns. These latter were explained largely, however, by two suspensions, both of financial institutions, due to dishonesty within the institutions themselves and not to the effect of unfavorable business conditions outside thereof. It might be explained that the comparatively small liabilities reported for August this year are also partially assignable to the fact that some commercial and manufacturing concerns which suspended during August because of difficulty in obtaining supplies of money are, in the opinion of good authorities, likely to pay their debts to outside creditors in full, and are therefore, at this writing, not classable strictly as failures, according to BRADSTREET'S definition of a commercial failure. To cite an instance of this kind, it might be said that a large eastern manufacturing concern has, owing to failure to obtain accommodation, passed into the hands of a receiver, but the concern continues in operation, and the statement of assets as compared with liabilities gives assurance that the concern will continue in business and pay all its outside creditors' claims in full.

There were 669 failures reported to BRADSTREET'S for the calendar month of August, an increase of forty failures, or 6.3 per cent., as compared with August a year ago. With the exception of that month, however, the number of failures is the smallest reported in August since monthly totals were first compiled. This latter feature is really of greater importance than appears at first sight. That following an unfavorable spring and early summer the number of failures for the last summer month should be so light is evidently indicative of much lost ground having been regained through the beneficial effects of later good trade. The liabilities of failing traders in August aggregated $9,396,957, a decrease of 45 per cent. from August a year ago, but 22 per cent. larger than in August, 1905.

Following will be found the record of August failures, with the liabilities and assets, as compared with the like month of preceding years:

	Number	*Assets*	*Liabilities*
1907	669	$5,021,218	$9,396,957
1906	629	8,865,816	17,219,753
1905	765	4,033,000	7,676,275
1904	840	5,213,178	9,628,511
1903	683	4,667,702	9,517,483
1902	695	2,359,658	5,603,206
1901	788	4,737,486	9,988,193
1900	704	2,952,595	6,097,719
1899	675	2,155,700	4,524,179
1898	774	3,302,215	6,992,970
1897	961	3,501,293	9,815,545
1896	1,175	16,518,461	26,110,366
1895	832	5,624,077	9,874,008
1894	753	6,264,551	12,287,318
1893	1,835	33,301,239	47,753,647

The features of the detailed returns for August are the increases in the number of failures in New England, the middle, northwestern and southern groups, the western and far-western groups showing fewer casualties than in August a year ago. New York City also shows an expansion in the number of suspensions. As regards liabilities, the features are the decreases from a year ago in the middle and western groups. A year ago a trust-company suspension in Pennsylvania and a bank failure in Chicago swelled the liabilities very greatly. This year in August the expansion in liabilities is confined to the far-western and New England groups, the swelling of the liabilities in the first named being due to a trust-company suspension in Oregon.

A feature of the month's failure record is the comparatively small number of large concerns reported suspending during that month, but the ten concerns failing owing outside creditors in that month account for slightly more than 40 per cent. of the entire liabilities. A trust company in Oregon, a few large builders and several automobile manufacturing concerns contribute to this total. If anything like a tendency in any one line is shown, it is that special strain appears to have been put upon some less fortunately situated concerns making automobiles and other motor-driven vehicles.

August	*No.* 1907	*Assets* 1907	*Liabilities* 1907	*No.* 1906	*Assets* 1906	*Liabilities* 1905
New England	99	$284,013	$728,142	73	$152,385	$397,455
Middle	197	1,138,218	3,266,631	176	4,860,359	9,066,346
Western	131	761,632	1,462,340	141	3,097,312	6,257,497
Northwestern	53	185,626	335,888	44	133,594	378,530
Southern	134	483,151	888,703	122	525,291	912,981
Far-western	47	2,124,258	2,634,652	65	80,772	180,424
Territories	8	44,320	80,601	8	16,103	26,520
Total, United States	669	$5,021,218	$9,396,957	629	$8,865,816	$17,219,753
New York City	91	410,161	1,799,209	74	352,993	903,674
Manhattan and Bronx	82	398,831	1,763,859	64	311,126	816,573
Canada	103	370,926	949,908	76	180,005	368,962

The failures, assets and liabilities monthly and quarterly since January 1 follow:

	Number	*Assets*	*Liabilities*
January	1,112	$8,637,164	$17,119,459
February	775	5,560,793	10,092,877
March	741	6,010,043	11,192,550
First quarter	2,628	20,208,000	38,404,886
April	733	5,626,601	9,888,052
May	755	5,290,090	10,546,963
June	675	10,869,132	17,706,398
Second quarter	2,163	21,785,823	38,141,413
Six months	4,791	41,993,823	76,546,299
July	733	8,716,782	13,931,290
August	669	5,021,218	9,396,957

August failures and liabilities alike were the smallest reported in any month this year.

The number, assets and liabilities for eight months of this year compare with similar periods of preceding years as follows:

	Number	*Assets*	*Liabilities*
1907	6,193	$55,731,823	$99,874,546
1906	6,203	43,467,516	85,810,830
1905	6,711	43,157,306	80,843,906
1904	6,969	55,568,344	101,473,777
1903	6,191	38,303,382	79,025,327
1902	6,729	32,412,509	69,100,318
1901	7,084	44,339,870	92,057,880

The number of failures for eight months is still just a trifle smaller than in 1906, and considerably less than in any preceding year since 1900, except 1903, which it very closely approximates. The liabilities are 16 per cent. larger than in 1906, but still slightly below those of 1904, while 26 per cent. larger than those of 1903.

Canadian failures for August number 103, as against 76 in August, 1906, while the liabilities are $949,908, as against $368,962 in August a year ago.

AN IMPROVED MONEY MARKET.

Considerable success appears to have attended the initiation of Secretary of the Treasury Cortelyou's plans for aiding the money market during the crop-moving season, which were described a week ago. It was understood that $5,000,000 per week was to be added to the government deposits in national banks, and it appears that the first weekly installment has been distributed, the larger proportion thereof being placed with banks in the west and [illegible] although it is further stated that [illegible] have received about south, [illegible] that the New York institutions [illegible] $1,000,000. It is also to be noted [illegible] metropolitan banks which were favored with an increase in their government deposits were not what are ordinarily termed Wall street institutions, but banks whose principal relations are with the mercantile community. The effect of the Secretary's action has, however, been to lessen the strain which was making its appearance in connection with the demands from the interior for money to be used in the movement of the crops, and with a prospect that the same policy will continue in force for the next five or six weeks, there has been a considerable improvement in sentiment and an exhibition of increased confidence in the banking world, of which evidence has been afforded by the renewed readiness of New York banks and other institutions to put out money on time, whereas up to last week, inclusive, there was a great scarcity of such funds and a general unwillingness to tie up money for any extended period. Instead, therefore, of quotations of 7@7½ per cent. for collateral loans running beyond the end of the year, and a positive scarcity of funds available for that purpose, the offerings of time money at New York this week have become fairly liberal, and five and six months' loans have been made at 6 per cent., while for shorter periods the quotations have been fully 1 per cent. below those which prevailed prior to the adoption of the Treasury's policy.

Another circumstance which has also not been without considerable influence on the money market is the better position abroad in regard to money and rates, together with a decided weakening of foreign exchange at New York. At that center demand sterling has sold as low as 4.86.10, a quotation at which further shipments of gold to Europe, even as special transactions, are impracticable. The most gratifying feature in the situation is that the recession in exchange is the result of the appearance in the market of considerable drawings against future shipments of cotton and grain, while there have also been renewed offerings of finance bills, showing that the unwillingness which has reigned in London to discount American paper has relaxed. In this connection it is supposed that arrangements for European participation in the New York City bond subscription next week plays a not unimportant part.

IRREGULAR TENDENCIES IN CLEARINGS.

Bank clearings at ninety-seven cities of the United States for the month of August aggregated $11,561,011,160, a decrease of 5.6 per cent. from July, and of 11.1 per cent. from August a year ago. New York City clearings in August aggregated $6,890,490,489, a decrease of 5.8 per cent. from July, and of 21.9 per cent. from August a year ago. Outside of the metropolis the clearings aggregated $4,670,520,671, a decrease of 5.5 per cent. from July, but a gain of 11.6 per cent. over [illegible]06. The two notable features [illegible] August, 190[illegible]are, first, the close of the above showing [illegible]es from agreement shown in the decreases the July aggregates, and, second, the sharply dissimilar tendencies shown when comparing the clearings at New York and outside thereof with the corresponding period a year ago. Thus the tendency is still toward decreases at New York, while the opposite tendency is manifested as regards the bulk of the other cities of the country.

The monthly clearings at New York and at all other cities reporting compare with preceding months of 1906, 1905 and 1902 as follows:

[Six figures omitted.]

	New York City				*Outside New York*			
	1907	1906	1905	1902	1907	1906	1905	1902
Jan	$9,638	$11,238	$7,735	$6,929	$5,273	$5,007	$4,050	$3,634
Feb.	7,331	8,324	7,118	5,348	4,362	4,066	3,480	2,977
Mar	9,562	8,377	8,731	5,506	4,971	4,545	4,124	3,377
April	7,667	8,543	8,681	7,352	4,869	4,271	3,991	3,526
May	7,335	8,793	7,884	6,805	4,941	4,352	4,104	3,541
June	6,369	7,816	6,735	4,967	4,709	4,350	4,020	3,207
July	7,312	7,256	6,839	6,593	4,945	4,322	3,967	3,546
Aug	6,890	8,833	6,980	5,816	4,670	4,182	3,865	3,087
Sept	....	8,314	6,859	6,804	....	4,097	3,944	3,300
Oct	....	9,344	8,026	7,496	....	5,066	4,512	3,799
Nov	....	8,607	8,542	6,539	....	4,917	4,514	3,495
Dec	....	9,228	9,689	6,166	....	4,954	4,671	3,668

Following are the aggregates of clearings monthly at all cities, compared with the same periods in five preceding years:

[Six figures omitted.]

	1907	1906	1905	1904	1903	1902
Jan	$14,911	$16,245	$11,785	$9,364	$11,032	$10,576
Feb	11,692	12,390	10,599	7,664	8,420	8,328
Mar	14,533	12,923	12,855	8,335	9,533	8,884
April	12,536	12,814	12,672	8,267	9,530	10,881
May	12,276	13,145	11,988	8,171	9,073	10,348
June	11,077	12,166	10,756	8,016	9,386	8,177
July	12,257	11,579	10,806	8,625	9,724	10,139
Aug	11,561	13,015	10,846	7,968	7,888	8,906
Sept	....	12,410	10,804	8,785	7,625	10,106
Oct	....	14,410	12,538	11,439	9,111	11,297
Nov	....	13,525	13,057	12,443	8,105	10,032
Dec	....	14,182	14,361	12,738	9,225	9,810

Following will be found the gains or losses by groups, in percentages, shown in August and the eight months, as compared with the same periods a year ago:

	August		*Eight months*	
New England	Increase	8.9	Increase	5.8
Middle	Decrease	20.0	Decrease	9.0
Western	Increase	13.6	Increase	11.3
Northwestern	Increase	23.1	Increase	16.3
Southwestern	Increase	17.5	Increase	15.9
Southern	Increase	7.1	Increase	4.9
Far-western	Increase	7.9	Increase	23.7
Total, United States	Decrease	11.1	Decrease	3.2
New York City	Decrease	21.9	Decrease	10.2
Outside New York	Increase	11.6	Increase	10.3
Canadian	Increase	11.7	Increase	10.9

The one group showing a decrease is that of the middle-states cities, which fell off 20 per cent., due largely to the loss at New York, though Philadelphia also shows a decrease for August. These two cities, with New Orleans and Savannah in the south and San Francisco in the far west, are the only large cities showing declines. The groups of cities showing gains report increases varying from 7.1 per cent. in the south and 7.9 per cent. in the far west to 8.9 per cent. in New England, 13.6 per cent. in the western group, 17.5 per cent. in the southwest and 23.1 per cent. in the northwest. Chicago, with a gain of 24 per cent., and Minneapolis, with a gain of 22 per cent., account for a large part of this gain, though every city in that group shows a greater or smaller increase over August a year ago.

For the eight months ending with August the clearings at ninety-seven cities aggregate $100,846,900,092, a decrease of 3.2 per cent. from 1906. New York City clearings alone aggregated $62,105,266,878, a decrease of 10.2 per cent. from last year, while outside of the metropolis the clearings aggregated $38,741,633,214, a gain of 10.3 per cent. over last year.

BANK CLEARINGS AT 114 CITIES FOR AUGUST AND EIGHT MONTHS, 1907 AND 1906.

CLEARING HOUSES.	August		Eight months	
	1907	1906	1907	1906

* Contains other items than clearings, hence excluded from totals. § Not included in totals because of incomplete comparisons.

Canadian clearings for August (eleven cities reporting) aggregated $353,461,692, while those for eight months aggregated $2,750,411,926, gains of respectively 11.7 and 10.9 per cent. over the like periods a year ago.

SLOW PROGRESS AT THE HAGUE.

Among all the delegations to the Peace Conference, that from the United States seems to have met with the most noticeable success in impressing its views upon the assembled diplomats at The Hague. The members of the delegation have displayed singular skill in discerning the temper of the conference; they have brought forward a limited number of propositions along well-defined lines upon matters of practical interest, and they have been sedulous in modifying their proposals so as to obviate criticisms which have developed in the discussions had upon their proposals. It would not be surprising if, when the record of the conference is made up, their contribution to the actual results achieved will be second to that of no other body of representatives participating in the deliberations.

Another step in progressing the proposal regarding the collection of contractual debts was taken on Tuesday, when Gen. Horace Porter secured the practically unanimous approval of it by the committee on examination, to which it was referred some time ago. In the form in which it came before that committee it was modified somewhat to meet reservations made when it was first put to a vote in committee, and was made to provide that, with the view of preventing armed conflicts of pecuniary origin among nations arising out of the demands of the government of one country for payment by the government of another country of contractual debts due to persons of its nationality, the signatory powers agree not to have recourse to armed force for the recovery of contractual debts. This stipulation, however, is not to be applicable when the debtor state refuses or leaves unanswered an offer of arbitration, or in case of its acceptance makes a conclusion or compromise impossible, or after arbitration fails to conform to the award. It is further provided that the arbitration of a question shall as regards procedure be in conformity with section 3 of the convention for the pacific regulation of international conflicts adopted at The Hague, and that it shall determine the justice and amount of the debt and the time and method of its settlement. Of the nations represented on the committee only Switzerland withheld its vote, and there is reason to believe that it will sign the convention with a reservation in case of its adoption. The proposal now goes to a plenary sitting of the committee on arbitration.

The proposal for the establishment of a permanent international high court of justice came up for discussion in the committee of examination on Monday, when only a few minor changes in the rules of procedure and jurisdiction were made. The question as to the allotment of the judges, upon which a divergence of opinion was revealed some time ago, was the subject of discussion, and the delegates from a few countries suggested that it was useless to continue to debate the proposal when no agreement could be reached on the question. A majority of the committee, however, decided to resume consideration of the subject on Thursday. On that day, after an eloquent address upon the matter by Mr. Choate, the committee approved the American proposition with the exception of the paragraph relating to the allotment of the judges, which has been referred to a small committee to meet on Tuesday next. The provision for the appointment of three judges with three substitutes to constitute a special "tribunal" to try cases elsewhere than at The Hague was modified by the substitution of the word "delegation" for "tribunal." It was also decided to change the title of the whole body to "The Court of Arbitral Justice." Dr. Drago, the Argentine representative, while casting his country's vote in favor of the project, declared that the South American republic maintained its original reserves on the subject. One of the incidents of the week was the withdrawal from the conference of the Venezuelan delegation, which followed closely upon a published criticism by President Castro of the American proposal as to the constitution of the court.

Conjectures have heretofore been ventured as to the probable date of the adjournment of the conference, and the opinion was at one time expressed that it would bring its work to a close by the end of August. That time has now passed, and, as will be seen, a committee session has already been arranged for September 10. On Saturday last the Netherlands officials requested M. Nelidoff to inform them when the Hall of Knights would be free, as it would be needed for the opening of the Parliament on September 17. After a long consultation between the leading officials of the conference, President Nelidoff informed the Foreign Minister of the Netherlands that it would be impossible for the conference to adjourn before that date, but that the hall would be given up for four days for the opening of the Parliament. It was announced on Wednesday that the Queen of the Netherlands had decided to leave the Hall of Knights at the disposal of the conference and to open the Parliament in some other building. The opinion is entertained now that the conference will not bring its sessions to a close much before the end of the present month.

INDUSTRIAL EDUCATION ABROAD.

The increasing attention given to the subject of industrial or technical education lends interest to some information gathered by a committee sent by the Massachusetts commission on industrial education to study conditions abroad. The committee has collated many facts of present-day interest, not only regarding the courses of study followed in the leading industrial schools abroad, but also touching the organization and financing of the institutions themselves. The material gathered is derived from a study of the situation in the British Isles as well as in Germany, France, Switzerland, Belgium and Holland, thus covering the principal European countries in which special attention has been given to the subject of educating for efficiency in industry.

It appears from the committee's report that local conditions vary greatly in England. Liverpool has a great technical school with 1,500 pupils in evening classes, but these are employed in the daytime, when, except for certain summer classes,

the building is unoccupied. Manchester has a notable school of technology housed in a building costing $1,500,000, the heavy running expenses of which are paid in part by the national government, in part by the city and in part by students' fees. London is pretty well provided with polytechnic schools of the kind established in Manchester and Liverpool, and at the top is an Imperial College of Technology the formation of which has been authorized by the government.

In Scotland two representative institutions in which industrial education is given are deemed worthy of special mention in the report. These are the Heriot-Watt College, at Edinburgh, and the Glasgow and West of Scotland Technical College, at Glasgow. In the former, day, evening and summer courses are given, and Edinburgh possesses a museum with a remarkable collection of mechanical models. The Glasgow institution, originating in 1796 as Anderson's College, from the name of a professor of natural philosophy in the university, was united ninety years later with several other local institutions. Nearly $1,000,000 has been spent on the institution's building and an expenditure of over one-third more is planned. About 6,000 pupils attend the school, of whom three-fourths are evening pupils. Of those attending this great school about 70 per cent. are day students, and of the evening students 80 per cent. are over twenty years of age. The day students, it may be noted, come from all parts of the British islands and the colonies, and practically all the important works within twenty-five miles of Glasgow are represented in the evening classes. The object of the institution is not to supersede the ordinary apprenticeship, but to supplement it.

Less is generally known about the provision for industrial education in Ireland, but it appears that $1,000,000, of which one-fourth is contributed by the local authorities, is spent for the purpose there. The work is under the supervision of a department which also has charge of agriculture. The recent progress in the matter of equipment has been noteworthy, as may be gathered from the fact that while in 1900 only six secondary schools possessed laboratories, 265 were equipped with them at the time of the visit of the committee. The larger cities have established technical institutes where trade courses are offered with a thorough equipment for instruction. The Dublin industrial school, with about 800 pupils, is in charge of the Christian Brothers, as is also a large school in Cork, which is declared to be fully equal to the typical Massachusetts manual training schools and contains what the committee reports to be on the whole the finest museum seen in any school visited. In the same city there is a school similarly managed for girls, and in Killarney two schools of lacemaking were thought worthy of mention. In Belfast there is a notable technical school which is supported by the city, with a subsidy from the government of about one-half the cost of maintenance. The laboratories in this school are unusually fine; it is equipped for teaching a large variety of trades, and it is attended by both day and evening classes.

Germany's industrial schools are, of course, celebrated. Their courses cover the entire educational period. In the lower schools instruction is usually given in the evening and on Sundays, but there is a movement in the direction of carrying it on in the daytime, as is done in the city of Munich, where the schools are reported to be found in their greatest perfection. The expense of the schools in that city is met by a combination of fiscal contributions by the municipality, the trade guilds and the central government, the latter in some cases paying one-half the cost of maintenance. In the lower industrial schools instruction is given in about forty trades. In Berlin the industrial institutions offer both day and evening instruction, and the fine school of arts and the industrial museums make the city a great center of technical education. The government takes a lively interest in the subject, aiming to blend the educational with the purely industrial element in the education furnished. In some of the German schools the instruction given is criticised as being still too theoretical.

In France the schools are housed in older buildings than those in Great Britain and the instruction is of a more settled character. Some of the Paris schools draw upon the various departments of the country as well as the city for their pupils. The education given is recognized as having a specific monetary value. It is one tendency of the French schools to train the pupils on the artistic side of their work, and there is an effort to give breadth of training, as is illustrated in the Estienne school of bookmaking, where the pupil is at first introduced to the rudiments of the various associated trades taught and is then obliged to follow one of those trades to the end. The pupils in France begin their trade instruction at as early an age as thirteen.

Switzerland has some noteworthy technical schools in the cities of Geneva, Berne and Zurich. In the first-mentioned city the horological school is naturally a prominent institution. The hours of instruction are from seven to six in summer, with an hour and a half intermission, and from eight to seven in winter. This school develops many workmen of notable skill. Since 1876, among its other institutions, the city has had a central school of industrial arts whose cost is sustained half by the municipality and half by the federation. Berne has an apprenticeship school with four departments offering instruction in the trades of cabinetmakers, machinists, locksmiths and tinsmiths. Here, also, the expense is shared between local and central authorities. Apprentices in Switzerland are obliged to attend their departmental schools.

In Belgium there is some complaint that industrial education is fettered by tradition. In Brussels the industrial school work is largely confined to evening instruction, though there are day schools in which technical training is given. The schools, as a rule, make a specialty of teaching the local industries. A markedly successful institution is the industrial school for girls, where a great variety of industries are represented. In addition to general studies, the conduct and management of a household, dressmaking, millinery, cooking and commercial training are special features. In this school a fee of 100 francs a year is charged. Similar schools are found elsewhere in the country. Among special schools mentioned are those for carpenters [illegible] machinists in Brussels. In Holland [illegible] of the school for and machin[illegible] pupils special mention is made [illegible] metal workers at Amsterdam, wher[illegible] attend, from about fourteen to sixteen years of age, a two-year course, of which half is devoted to shop work and half to theory and drawing. This school gives courses in woodwork, forging and ornamental ironwork and machine-shop practice.

BUILDING IN AUGUST.

The expenditures for building at leading American cities for August this year and last, and for July, 1907, as reported to BRADSTREET'S, follow:

United States	*Aug.*, 1907	*Aug.*, 1906	*July*, 1907
Allegheny, Pa	$537,048	$294,366	$194,347
Atlanta, Ga	242,672	399,244	435,464
Buffalo, N. Y.	651,000	374,075	942,986
Chicago, Ill.	4,492,275	5,439,175	5,316,500
Cincinnati, Ohio	796,428	749,790	797,202
Cleveland, Ohio	1,027,545	1,100,000	1,365,513

Total, 41 cities	34,627,376	35,835,421	35,840,620
Canada			
Hamilton, Ont.	124,000	444,860	297,025
Toronto, Ont.	1,201,410	1,271,620	1,219,435
Total, 2 cities	1,325,410	1,716,480	1,516,460

* New work. † Alterations.

There is here shown a total expenditure of $34,627,376 at forty-one cities for August, a decrease of 3.4 per cent. from July, and of 3.3 per cent. from August a year ago.

EDITORIAL NOTES.

One of the financial surprises of the week was in the form of an announcement, made on last Thursday, that the quarterly dividend on the stock of the Chicago, Burlington & Quincy Railroad had been increased, so that it is placed upon an 8 per cent. annual basis, instead of one of 7 per cent., as heretofore, and furthermore that an extra dividend of 6 per cent. accompanied this action. Of the total $110,839,100 of the Burlington share capital, $107,611,600 is owned jointly by the Great Northern and the Northern Pacific railways, all of the latter being deposited as collateral security for the 4 per cent. joint bonds of those two companies, which leaves only some $3,000,000 of the original stock outstanding in the hands of the public. In explanation of the increased and extra dividend, interests connected with the two controlling companies state that the 7 per cent. dividend heretofore paid on the Burlington stock left a difference between the amount received by the Great Northern and Northern Pacific and that which was paid for interest on the joint bonds of approximately $1,000,000 per annum. The extra dividend, which aggregates over $6,000,000, therefore reimburses the controlling companies for their outlay. Wall [illegible]eet, however, sees something of more str[illegible] than the above in the matsignificance t[illegible] for some time ter. It has been reported [illegible] that a separation of the joint control was considered advisable from a legal standpoint, and that the probabilities were that the Great Northern would soon assume sole control of the Burlington.

In a number of respects the annual report of the American Smelting & Refining Company, which was published this week, is a very interesting document. In common with the general run of enterprises identified with the mining and metallurgical industries of the country, it naturally enjoyed a year of much prosperity, and, as was to be expected, the earnings for the twelve months which ended April 30, 1907, make a very favorable comparison with the figures covering the preceding fiscal year, the results for the two periods being compared in the following table:

Year ending April 30	1907	1906
Earnings	$13,250,058	$11,665,885
Betterment and replacement	976,534	828,582
Balance	12,273,524	10,837,303
Taxes and general expenses	763,854	675,945
Net earnings	11,509,670	10,161,358
Appropriations	1,595,416	1,387,303
Balance	9,914,254	8,774,055
Preferred dividends	3,500,000	3,500,000
Balance	6,414,254	5,274,055
Common dividends	3,500,000	3,250,000
Surplus	2,914,254	2,024,055
Pres. surplus	10,482,775	8,458,720
Total surplus	13,397,029	10,482,775

It will be seen from the above that after paying the regular 7 per cent. dividends upon the preferred stock, the balance applicable to dividend payments upon the $60,000,000 of common stock was equivalent to 12.82 on the latter. There has been a somewhat general impression that the company's profits were dependent to some extent upon the market prices of copper, silver and other metals. The report, however, states that the figures take no account of the appreciation in prices for its metal stock, the conservatism exhibited in this respect being justified by the shrinkage in quotations for copper and lead since the end of the fiscal year.

No surprise was occasioned by the announcement made this week that the dividend upon the Interborough-Metropolitan Company's 5 per cent. preferred stock had been passed. Wall street, in fact, had fully expected such action, and had already discounted it by the severe decline in the stocks of the organization in question. Action upon the 7 per cent. guaranteed dividend on the stock of the Metropolitan Street Railway Company was, however, postponed for the moment, but it is the general impression that a default is more likely than the continuance of the payment of unearned dividends on this security. In fact, the decline in the price of Metropolitan to around 35 would seem almost conclusive. Meantime the investigation by the Public Service Commission into the affairs of the Interborough-Metropolitan combination, and those of the constituent companies involved in that ill-starred scheme, seems to leave no doubt whatever that further very serious complications are in prospect, and that the courts will ultimately be called upon to unravel the tangle.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Note—Forgery—Genuine Signature.

The Supreme Court of Maine held, in the case of The Biddeford National Bank vs. Hill, that where a person did not intend to sign a promissory note, but by fraud and deceit was tricked into signing an instrument which afterward proved to be a promissory note, such instrument was a forgery, although the signature affixed thereto was genuine.

Stock—Sale—False Representation.

The Supreme Court of Michigan held, in the case of Scott vs. Brusse, that one could not rescind his purchase of shares of stock because of a false representation, in the form of a prediction of the seller that it would prove a profitable investment, where he did not rely thereon, but did rely upon his judgment already formed, and on the result of information obtained from other stockholders and officers, or because of false representations in the reports of the company of which he did not know at the time.

Investigation—Holding Up Mail.

Judge McPherson of the United States District Court at St. Louis held, in the case of The Donnell Manufacturing Company of that city, that the postal authorities have no right to hold up the mail of concerns whose methods are being investigated. It appeared in this case that on August 13 the company in question was notified of charges preferred against it, and that on September 2 it should have representatives before the Post Office Department at Washington to show why a fraud order should not issue against it. In the meantime its mail was marked "fraudulent" and returned. Judge McPherson held that this action was unlawful.

Bankruptcy—Agreement—Prosecution.

The United States District Court for the Eastern District of Pennsylvania held, in re Rosenblatt, that a court of bankruptcy will not encourage or approve an agreement between the trustee and creditors of bankrupts not to furnish any evidence against the bankrupts in any criminal prosecution, and not to institute such prosecution in consideration of certain transfers of property to the trustee, and an increase in the assets by a fund raised by the friends and relatives of the bankrupts for their benefit, and that where a court of bankruptcy refused to approve an agreement between bankrupts and their trustee and certain creditors because it involved a compromise on the question of criminal prosecution against such bankrupts, in consideration of a payment of certain funds to the trustee by third persons, the court would not interfere with or control the disposition of the amount so paid among the creditors.

Real Estate—Broker—Commission.

The Supreme Court of North Dakota held, in the case of Anderson et al. vs. Johnson, that under a contract whereby the defendant agreed to pay to the plaintiffs a commission of $100 for obtaining the sale to him of certain real property, it was incumbent upon the plaintiffs, in an action to recover such commission, to prove that the person produced as such owner of the property was willing to sell at such stated price, and also that such person was able to convey a merchantable title to the defendant. The court said: "Counsel for respondent, as well as the trial court, also seem to have labored under the false impression that the commission was earned when plaintiffs produced the owner, who was willing although unable to sell to the defendant. * * * Surely it cannot be successfully contended that under a contract such as the one stated in the complaint the commission would be earned by bringing to the defendant a person claiming to be the owner, but who in fact had no title, and who, nevertheless, was willing to enter into a contract agreeing to sell and transfer title. This is to our minds too plain for discussion."

Taxation—Exemption—Wharf—Church.

The case of The Mayor and City Council of Baltimore et al. vs. The Minister and Trustees of the Starr M. P. Church, decided by the Maryland Court of Appeals, involved the validity of chapter 263 of the laws of 1904, which exempted from taxation certain wharf property in the city of Baltimore, the rents, profits and yearly income of which had been bequeathed to the appellees by one Wesley Starr. In the court below the appellees secured an injunction restraining the city collector from selling the property for taxes and enjoining the mayor and other local authorities from assessing the property for the purposes of municipal taxation. The Court of Appeals reversed the decree of injunction, holding that the act in question was unconstitutional, because it was an attempt to exempt one piece of a particular class of property while all the other properties of the same class were still taxable, and, further, because it was in conflict with article 3, section 33, of the constitution of Maryland, which provides that the General Assembly shall pass no special law for any case for which provision has been made by an existing general law.

Railroad—Arrest—Special Officer.

In the case of The Baltimore, Chesapeake & Atlantic Railway Company vs. Twilley, recently decided by the Court of Appeals of Maryland, it appeared that the appellee, who was a passenger on a train of the defendant railroad company, alighted from a train at a station, and while upon the defendant's premises and in the act of boarding the train to continue his journey was arrested by a special officer of the company and was imprisoned in jail until the next morning, when he was released. The special officer was a machinist in the employ of the defendant company, and the night before the arrest he was appointed by the mayor of Salisbury, where the arrest was made, for one day only, as a special police officer for the town and for the company, and was acting as such on the train the next day, and while thus employed he was paid his usual wages as a machinist by the railroad company. The court held that the capacity in which the special officer was acting, whether as an employee of the railroad company or of the town in the exercise of his powers as such officer, or whether he was acting within the scope of his duty as such employee, were questions to be submitted to the jury.

Sale—Rescission—Detention—Conversion.

In the case of The C. L. Flaccus Glass Company vs. Alvey-Ferguson Company, decided by the Court of Appeals of Kentucky, it appeared that the plaintiff, a resident of the state, sold machinery to the defendant, a citizen of another state (Pennsylvania), and erected it on the defendant's premises in the latter state. It failed to work and the contract was rescinded by consent, with the understanding that the plaintiff should take the machinery away and return payments made by the defendant. The court held that the defendant had the right to be repaid before the property was removed, so that its refusal to part therewith till it was repaid was not a conversion. The court said: "The seller lived in a distant state, and if the property had been removed the purchaser would have been without remedy, except to go to Kentucky and sue there the seller for what he had paid upon the property. If he had parted with the possession of the property he would have nothing to look to but the personal solvency of the seller. His demand under such circumstances, that what he had paid upon the property should first be paid back to him, was reasonable, and his refusal to part with the property until he was repaid was no evidence of a conversion of the property by him."

Sale—Drugs—Selection—Warranty.

In a case decided by the Supreme Court of Wisconsin, it appeared that a contract for the sale of a stock of drugs and pharmaceutical preparations of the vendor's manufacture provided that all the stock furnished should be carefully selected to meet the drug business of the purchaser's vicinity. The court held (Wm. S. Merrell Chemical Company vs. A. Spiegel Company) that this provision did not constitute a warranty that the stock would meet the demands of the trade at and tributary to the city of vendee's business, but was at most an agreement by the vendor to exercise due care and good faith in any selection it might make. The court said: "Conceding for the purposes of argument that the parties contemplated that a selection would be made or at least originally suggested by the seller, it seems to us obvious that nevertheless there was no warranty expressed therein that the goods so selected should accord with the demands developed in practical working of the trade in and about Milwaukee thereafter. The articles themselves named in the plaintiff's catalogue were well-known commodities, the quality of each of which for the purposes designed is in nowise assailed. The selection of $1,500 worth therefrom was, of course, merely a choosing of those articles most likely to meet the demands of the prescribed locality, and in the proportions most likely to accord with that demand. What that demand would prove to be was, of course, impossible of knowledge beforehand."

BUSINESS NOTES.

Savings-Bank Returns.

This table, taken from the New York *Evening Post*, shows the amount of deposits in the savings banks of New York state at the different semi-annual periods, with the increase for each six months:

	Total deposits.	*Increase for half year.*
July, 1907	$1,394,296,034	$32,260,198
January, 1907	1,362,035,836	26,942,783
July, 1906	1,335,093,053	42,734,187
January, 1906	1,292,358,866	39,430,566
July, 1905	1,252,928,300	54,345,158
January, 1905	1,198,583,142	32,491,698
July, 1904	1,166,091,444	34,809,501
January, 1904	1,131,281,943	18,863,395
July, 1903	1,112,418,552	35,034,809
January, 1903	1,077,383,743	25,694,557
July, 1902	1,051,689,186	37,383,320
January, 1902	1,014,305,857	26,684,048
July, 1901	987,621,809	40,492,071
January, 1901	947,129,638	25,048,042
July, 1900	922,081,596	34,600,946
January, 1900	887,480,650	35,037,372
July, 1899	852,443,278	36,298,911
January, 1899	816,144,367	28,931,891
July, 1898	787,212,476	20,527,560

Safety of Savings Deposits.

The Boston News Bureau states that "the safety of the savings-bank deposits in Massachusetts is well guarded. The total loss to depositors from 1834 to date amounts to $2,541,562. Of this amount only $585,685 has been lost in the last quarter of a century, and but five banks went into insolvency during this time. Not a savings bank in the state has been placed in receivers' hands for nine years. If the total amount lost during the period since 1880 were to be lost in a single year now, it would represent but 84-100ths of 1 per cent. of the $700,000,000 deposits. No Boston institution for savings has failed since 1878 without resuming business. In seventy-three years only five savings banks suspended because of the dishonesty of their officers. The total number placed in receivers' hands during this time, and which have not resumed business, is twenty-one. In 1878 there were eight failures, the greatest number of any single year, due principally to excessive real-estate loans on inflated values. In only one case since 1834 were excessive dividends a contributing cause of suspension."

Cotton Crop of 1906-07.

On Tuesday Col. William F. King, superintendent of the New York Cotton Exchange, issued his annual report for the cotton season ending August 31. His final summing up of the cotton crop for the year 1906-07 shows a yield of 13,539,948 bales, comparing with 11,233,847 the previous season. The production for the year was the second largest in the history of the cotton trade and was exceeded only by the crop of 1904-05, which reached 13,654,029 bales. Following are the comparisons:

	1906-07	1905-06	1904-05
Receipts at ports	9,907,840	8,005,295	10,295,445
Overland to northern mills and Canada	1,230,704	1,003,180	1,132,606
Southern mill takings (less taken from ports)	2,401,314	2,225,372	2,225,978
Total bales	13,539,948	11,233,847	13,654,029

The following table will show at a glance the source and extent of the demand, with last year's figures for comparison:

	This year	*Last year*
Southern mill takings	2,494,569	2,292,249
Northern mills and Canada	2,638,311	2,460,164
Exports to	5,132,880	4,752,413
Great Britain	*3,750,555	2,890,925
France	907,127	775,661
Germany and continent	3,451,207	2,775,179
Mexico	254,746	13,500
Japan, etc	840	131,716
Total	13,497,358	11,339,394

* 10,903 bales additional were exported via West St. Johns, N. B.

Conditions in South Africa.

A recent consular report points out that reports from South Africa show that at no previous period have stocks in the hands of the merchants there been reduced to so low a level as at present. A. H. Wilshere, the cape comptroller of customs, in his recently published report, states that so great is the "caution exercised by importers that it may be said that trade is being conducted on a monthly basis." In mining machinery, agricultural machinery and similar goods imports are expanding. Apart from these exceptional items the whole position in South Africa still remains one of waiting on the political settlement of the new colonies. Depression notwithstanding, South Africa remains, according to a British publication, the best market in the world for all British manufacturers who care to exploit it. It still purchases upward of $75,000,000 of manufactured goods yearly from the United Kingdom, and this means a far greater sum per head of the population than is involved in the purchases of Australia or any other British colony. The orders from Canada amount to between $15,000,000 and $20,000,000 less than from South Africa, according to this British publication. The British share of the foreign trade of South Africa has been steadily declining for years. In 1890 the British percentage of the entire trade was 82 per cent. and that of Germany 1 per cent. In 1903 the British share had fallen to 69 per cent., and it was further reduced in 1906 to 56 per cent., in which year Germany had increased her share to over 7 per cent. The share of competing foreign countries is rapidly increasing despite the preferential tariff accorded goods of British origin.

Transactions on New York Stock Exchange.

Transactions in stocks on the New York Stock Exchange in August aggregated 14,502,813 shares, an increase of 1,705,075 shares as compared with July, but a decrease of 17,220,732 shares as compared with August, 1906, when the dealings were the largest of any August on record, and a loss of 5,750,357 shares as compared with August, 1905. Trading by months is set out in the following:

	Stocks	*Bonds*
January	23,014,797	$53,266,000
February	16,483,152	31,941,500
March	32,250,842	53,958,500
April	19,220,048	43,254,400
May	15,755,363	33,930,500
June	9,734,359	21,666,500
July	12,797,738	25,348,700
August	14,502,813	30,152,500
Total	143,759,112	293,547,600

Comparisons on stock trading back to 1900 follow:

	August	*Eight months*
1907	14,502,813	143,759,112
1906	31,723,545	196,113,553
1905	20,253,170	170,912,790
1904	12,438,270	75,208,720
1903	14,464,776	111,442,918
1902	14,317,393	118,182,670
1901	10,771,312	202,490,643
1900	4,006,895	76,227,545

Bond dealings back to 1899 follow:

	August	*Eight months*
1907	$30,152,500	$293,547,600
1906	55,361,000	488,378,300
1905	88,111,000	724,269,200
1904	68,434,500	436,697,460
1903	51,555,800	450,942,250
1902	53,587,300	612,871,900
1901	36,821,700	723,293,420
1900	20,105,200	334,095,460
1899	49,692,410	651,268,090

It will be noticed that transactions in bonds in August, 1907, were smaller than in any similar month since 1900.

New National Banks.

Since the act was passed in 1900 permitting banks to be organized with $25,000, the south has made great strides, and under this law has established new banks, until now she is a close second to the middle west in the number of banking institutions. By sections, under the law of March 14, 1900, to date, new banks have been organized as follows:

	No. banks	*Capital*
New England states	40	$5,515,000
Eastern states	597	46,211,500
Southern states	908	51,614,500
Middle western states	997	63,752,500
Western states	828	27,756,000
Pacific states	214	16,003,800
Island possessions	5	700,000

There were in existence at the close of business August 31 6,582 national banking associations, with authorized capital stock of $904,494,775; circulation outstanding secured by bonds, $556,945,917; circulation secured by deposits of lawful money, $47,110,404, making the total amount outstanding $604,056,321. During August 39 associations, with aggregate capital of $2,120,000, were chartered. Since March 14, 1900, and under authority of the act of that date, charters were issued to 2,333 associations, with authorized capital of $60,840,500, and during the same period, under authority of the act of 1864, charters were granted to 1,256 banks, with total capital of $150,712,800, making the number of banks and capital organized from March 14, 1900, to August 31, 1907, 3,589 and $211,533,300 respectively. Number of national banks in existence, authorized capital stock, bonds on deposit to secure circulation, circulation secured by bonds, and by lawful money, on March 14, 1900, October 31, 1906, and August 31, 1907:

	Mar. 14, 1900	*Oct. 31, '06*	*Aug. 31, '07*
No. of banks	3,617	6,225	6,582
Authorized capital	$616,308,005	$845,939,775	$904,494,775
Bonds on deposit	244,611,570	539,653,180	559,319,710
Circulation on bonds	216,374,795	536,933,169	556,945,917
Circul'n, lawful money	38,027,935	46,238,816	47,110,404
Total circulation	254,402,730	583,171,985	604,056,321

CURRENT BUSINESS NEWS.

Commercial.

The Chamber of Deputies of Chile has authorized the government to reduce by 50 per cent. the import duties on woolen and flaxen textiles, footwear, galvanized iron, and sugars. The chamber also adopted a law suspending the present tax on Argentine cattle.

The output of new incorporations of $1,000,000 and over in the eastern states during August amounted to only $64,250,000. This is the smallest total for any previous month since November, 1905, when it involved but $50,000,000. In August a year ago the figures were $109,150,000. The high-water mark this year was in January, when the total was $267,340,000. Stringency in the time money market and depression in securities were the predominant factors which tended to cut down the volume of incorporations. Following are the comparative figures, compiled by the *Journal of Commerce*, of companies incorporated in the eastern states during August with an authorized capital of $1,000,000 or more:

	1907	1906	1905
January	$267,340,000	$411,945,000	$116,250,000
February	210,700,000	202,650,000	98,600,000
March	195,050,000	105,374,000	192,645,000
April	134,250,000	232,080,000	180,111,111
May	122,250,000	135,300,000	249,250,000
June	165,450,000	242,240,000	232,150,000
July	85,300,000	69,200,000	61,315,000
August	64,250,000	109,150,000	86,125,000
September	....	167,750,000	167,400,000
October	....	138,350,000	120,950,000
November	....	227,950,000	50,000,000
December	....	235,981,000	130,391,100
Total	1,244,590,000	2,037,907,000	1,694,187,211

French foreign trade in the first seven months of the year is returned as follows:

Imports—	1907	1906
Food	F559,365,000	F471,401,000
Raw materials	2,354,632,000	2,245,315,000
Manufactures	652,760,000	577,057,000
Total	3,566,766,000	3,293,833,000
Exports—		
Food	408,322,000	373,358,000
Raw materials	905,024,000	846,057,000
Manufactures	1,692,020,000	1,523,905,000
Post parcels	232,910,000	227,765,000
Total	3,239,176,000	2,971,085,000

The customs duties received on the imports amounted to 272,886,000 francs, against 244,961,000 francs in 1906. In the post parcels, silk goods exported represented a value of 23,358,000 francs, compared with 18,476,000 francs last year.

The Hungarian Minister of Agriculture estimates crops of the world, with comparisons, in bushels, as follows:

	1907	1906
Wheat	3,160,000,000	3,440,000,000
Rye	1,496,000,000	1,164,000,000
Oats	3,990,000,000	3,870,000,000
Barley	1,456,000,000	1,432,000,000
Corn	3,486,000,000	3,916,000,000

Exporting countries are credited with the following surpluses: Russia, 152,000,000; Danube, 32,000,000; United States, 160,000,000; Argentine, 112,000,000; the aggregate surplus amounting to 584,000,000 bushels and the requirements to 616,000,000 bushels. By countries, the wheat crop in bushels is as follows (three figures omitted):

Great Britain	52,250
France	348,330
Germany	122,830
Austria	52,250
Italy	181,500
Holland	5,680
Switzerland	4,180
Belgium	13,380
Denmark	4,400
Sweden	5,870
Norway	290
Spain	110,000
Portugal	8,800
Greece	8,070
Egypt	14,670
Hungary (including Croatia and Slavonia)	130,090
Bosnia and Herzegovina	2,270
Russia and European Asia	555,500
Roumania	53,170
Bulgaria and East Rumelia	31,170
Servia	11,000
Turkey, European Asia	47,670
East India	311,960
United States	641,670
Canada	93,500
Argentina	159,500
Chile	16,130
Uruguay	8,250
Australia	73,700
Algiers	33,800
Tunis	6,230
Tripoli	4,400
Mexico	16,500
Japan	23,830

According to Broomhall's foreign crop summary, cereal crops in the United Kingdom are improving, indicating about average yields of variable quality. In France crop indications are generally maintained. The weather in Germany is now rather better, but the main part of the wheat crop is still unchanged. Hungary reported free deliveries owing to the tightness of money. Rains for plowing are needed in Roumania. Reports from Russia regarding the yields of wheat were, on the whole, disappointing, and deliveries are very small. Shippers' advices are very bullish, indicating a poor wheat crop. In Belgium and Holland the crops are fair. Offerings are light in Spain, and good imports are expected. The outlook in Asia Minor is poor to middling.

During August there were imported at the port of New York 109 automobiles with a total appraised value of $415,278, compared with 113 cars with a value of $415,607 in the same month last year. Since January 1, 814 cars with a value of $2,816,589 have been imported at New York, compared with 935 cars with a value of $3,158,143 in the same period of 1906.

The British inspector general of bankruptcy reports 8,077 failures in Great Britain for 1906, with liabilities of £10,126,281, which compare as follows:

	Failures	*Liabilities*	*Assets*	*Loss to creditors**
1906	8,077	£10,126,281	£4,505,281	£7,926,211
1905	8,603	9,674,470	4,390,582	7,665,088
1904	8,631	11,086,357	5,770,337	9,371,780
1903	7,908	9,675,282	5,041,101	7,326,737
1902	7,597	10,052,797	5,527,625	7,475,124
1901	7,613	10,794,701	5,497,457	8,360,939
1900	7,764	10,742,925	5,090,151	8,383,031
1899	7,085	9,296,888	3,711,491	7,586,572
1898	7,556	10,674,487	4,601,419	8,612,968
1897	7,306	9,752,172	4,713,094	7,671,679

* Official estimate.

The following comparative statement of Belgium's foreign commerce for the first six months of 1906 and 1907, by Vice-Consul-General Gregory Phelan, of Brussels, shows an increase. Importations for the first six months of 1907 amounted to $330,959,488, against $309,221,512 for the corresponding period of 1906, an increase of $21,737,976. Exportations for the same period in 1907 were $236,763,136, and $228,575,497 for 1906, an increase of $8,187,639.

The annual cotton crop estimate of the New Orleans Cotton Exchange was issued Tuesday. Secretary Hester places the crop for last season at 13,510,000 bales.

A press dispatch from Victoria, B. C., says the most disastrous season in the sockeye salmon fishing and packing industry in the history of British Columbia has come to an end. The total of all the canneries is only about 285,000 cases of sockeyes. Possibly the worst results were those on the Fraser river, where but 55,000 cases were packed.

Consul-General R. P. Skinner, of Marseille, supplies the following information in regard to foreign fruit crop prospects: "An abundant crop of grapes is promised in the south of France, and a good quality is hoped for. More cannot be said, as a season of unfavorable weather might materially affect the present outlook. French prunes, commonly known as prunes of Agen, are expected to yield a medium crop only, and higher prices for the new campaign are to be anticipated, especially if the California crop is equally poor. We already hear that the prune crop of Bosnia, in Austria-Hungary, will be a total failure, and that there will not be sufficient supplies from that country to supply local requirements. Bosnia is usually depended upon to supply the German market to a large extent. An excellent crop of French almonds is assured. Italy gives a half crop, and Spain a good half crop. It is too early to determine much about the walnut crop. It seems likely that the nuts will be damaged and that fairly high prices will prevail."

Tea exports from Yokohama for the past six seasons to destinations mentioned below were as follows, in pounds:

To	1906-07	1905-06	1904-05
New York and east	5,741,527	7,926,490	10,914,282
Chicago and west	9,789,069	7,732,596	8,996,575
San Fr. and Pac. coast	4,880,795	3,213,241	3,792,167
Canada	3,052,372	2,771,342	4,048,167
Europe, etc	280,214	186,487	663,253
Totals	23,761,977	21,830,156	28,414,444

The increase of Chicago and the decline of New York as a tea distributing center from Japan are apparent in the above figures.

The total value of iron and steel and manufactures imported, not including ore, during the month of July, 1907, was $4,008,584, which compares with $3,287,916 for the corresponding month of 1906. The total value of the same commodities imported during the seven months ended July, 1907, was $25,402,412, against $18,921,011 in 1906 and $15,092,948 in 1905. The total value of iron and steel products, not including ore, exported during the month of July, 1907, was $17,614,017, compared with $12,766,712 for July, 1906. For the seven months ended July, 1907, the total value was $111,813,066, against $97,990,478 for the corresponding period of 1906 and $78,205,937 for the same period of 1905.

Exports of steel rails in July, 1907, amounted to 37,705 tons, valued at $1,225,444, against 23,623 tons, valued at $663,836, in July, 1906. For the seven months ended July, 1907, steel-rail exports amounted to 180,720 tons, valued at $5,387,947, against 203,352 tons, valued at $5,345,409, for the same period in 1906.

The fire loss of the United States and Canada for the month of August, compiled by the *Journal of Commerce and Commercial Bulletin*, shows a total of $20,248,000. The following table gives a comparison by months of the losses this year with 1905 and 1906.

	1905	1906	1907
January	$16,378,100	$17,723,800	$24,064,000
February	25,591,000	18,240,350	19,876,600
March	14,751,400	18,727,750	20,559,700
April	11,901,350	292,501,150	21,925,900
May	12,736,250	16,512,850	16,286,300
June	11,789,800	13,950,650	14,765,000
July	13,175,250	12,428,050	18,240,150
August	11,435,600	9,641,600	20,248,000
Total, eight months	117,758,750	399,735,200	155,965,650

Financial.

The computation which is made annually by *Le Moniteur des Intérêts Matériels* of the output of new securities throughout the world placed the amount of such issues in 1906, outside the United States, at $4,350,000,000, subject to reduction by refunding and conversion operations to about $2,500,000,000. If to this is added about $1,000,000,000 for the United States, the net new issues of 1906 stood at about $3,500,000,000.

Collections on the New York state stock-transfer tax for August amounted to $339,224, against $274,754 in July. In August a year ago the total was $795,000. The monthly averages this year were $344,007, against $571,721 last year and $478,146 in 1905.

The aggregate amount of money loaned on Manhattan real estate in the two months of July and August was as follows: 1904, $37,174,891; 1905, $82,896,240; 1906, $53,527,967; 1907, $29,346,678. The following table, says the *Evening Post*, shows the proportionate amounts loaned in each of the last four years, in July and August respectively, at the normal scale of interest rates:

	1904	1905	1906	1907
4 per cent	3.16	8.78	3.08	.09
4½ per cent	28.55	24.17	13.43	12.50
5 per cent	27.94	20.14	37.83	46.39
5½ per cent	.13	1.34	6.09	8.76
6 per cent	40.23	45.57	39.56	32.36

The significant items in this tabulation are the practical disappearance of 4 per cent. money, the dimunition by 60 per cent. of the 4½ per cent. money, and the increase by 75 per cent. of the 5 per cent. money.

The official statement of the financial condition of the Mississippi Valley Trust Company, at St. Louis, at the close of business on August 22, 1907, follows:

Resources	
Loans undoubtedly good on collateral security	$10,498,858.41
Loans undoubtedly good on real estate security	889,218.84
Other negotiable and non-negotiable paper and investment securities at present cash market value	1,396,181.00
Overdrafts by solvent customers	607.66
Bonds and stocks at present cash market value	7,516,319.97
Real estate at its present cash market value	161,808.92
Safety deposit vaults	72,000.00
Due from other trust companies and banks, good on sight draft	3,664,877.77

The directors of the Chicago, Burlington & Quincy Railroad increased the quarterly dividend from 1¾ to 2 per cent. Thursday, raising the rate to 8 per cent. annually, and also declared an extra dividend of 6 per cent., making the total of 14 per cent. for the year.

The national banks of the city of New York held 26.81 per cent. of legal reserves on August 22, 1907, against 24.36 per cent. on September 4, 1906, according to the official figures of the Comptroller of the Currency. Loans and discounts of thirty-eight banks reach $712,121,058, compared with $702,051,036 for forty banks last year; on May 20 the total for thirty-nine banks was $752,556,083. Individual deposits show a falling off from $659,198,930 a year ago to $532,634,606 last month, while $585,389,969 was shown in May. A summary for the city of New York follows:

	Aug. 22, '07	*May* 20, '07	*Sept.* 4, '06
Number of banks	38	39	40
Loans and discounts	$712,121,058	$752,556,083	$702,051,036
Individual deposits	532,634,606	585,389,969	659,198,030
Per cent. legal reserves	26.81	26.93	24.36

On Thursday the board of directors of the Interborough-Metropolitan Company passed the dividend of 1¼ per cent. for the quarter.

The National Railway Company of Mexico has arranged with Speyer & Co., of New York, representing Speyer Brothers, London, the Deutsche Bank of Berlin, Lazard Speyer-Ellissen, of Frankfort-on-Main, and Teixeira de Mattos Brothers, of Amsterdam, for the extension for eighteen months of its $8,500,000 5 per cent. notes due October 1, 1907.

A seat on the New York Stock Exchange sold this week for $68,000. This compares with $69,000 a few weeks ago, and is the lowest figure of the present movement.

The London *Bankers' Magazine*, in commenting on the decline in the price of leading English securities, gives this table:

Aggregate value of 387 representative securities on July 20, 1907	£3,633,717,000
Aggregate value of 387 representative securities on August 20, 1907	3,498,130,000
Decrease	135,587,000

Moreover, it must be noted that the present total of these securities shows a shrinkage since the beginning of the year of 345 millions sterling, of which 111 millions is in American railroad securities, 48 millions in British funds, and 36 millions in English railway ordinary stocks. Judged purely on a percentage basis, however, perhaps the most serious depreciation in the year has been in the South African market, where an average fall of about 25 per cent. has occurred.

Railroads.

According to the *Railway Age*, "the taxes paid by railways in the United States in 1906 aggregated $68,169,000. This is nearly 3 per cent. of the entire gross earnings, and is 8¾ per cent. of the entire net earnings. The man earning $1,000 a year who had to pay $87.50 of it for taxes would think that he was oppressed. The railways thought that way the year before, when their taxes amounted to $54,553,000, and the response they got was an increase of $13,616,000, or 25 per cent."

As a result of the reduction in passenger rates and the general condition of the money market, so far as railroads are concerned, all improvements have been ordered stopped by President J. F. Hanson of the Central of Georgia Railway Company. President Hanson says the road has not sufficient money to do the work.

Industrial.

The *American Federationist* reports that 1,594 labor unions, with an aggregate membership of 107,000, had 1.7 per cent. without employment in July. In the preceding month the ratio of idle labor-union members among a total of 81,500 was two-tenths of 1 per cent. In July, 1906, the percentage of unemployed was 1.4 per cent.

The output of asphalt of all classes broke the record in 1906, amounting to 138,059 short tons, valued at $1,290,340, as against 115,267 short tons, valued at $758,153, in 1905, according to the annual report of the United States Geological Survey. It will be noted that the increase in 1906 was 20 per cent. in quantity but 70 per cent. in value, the rise in the average price per ton of the product being due to the increased percentage of the high grades used largely in the manufacture of varnishes, paints, etc. The following table presents the output of all classes of asphalt for the last six years:

	Quantity	*Value*
1901	63,134	$555,335
1902	105,458	765,048
1903	101,255	1,005,446
1904	108,572	879,836
1905	115,267	758,153
1906	138,059	1,290,340

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The more cheerful tone of matters financial is reflected in the reports of expanding trade at large jobbing centers on fall account. Conservatism in buying is, however, still enforced by money market conditions, and purchases are not so large as they are numerous at many markets. Relatively the best reports come from leading northwestern and southwestern centers, which apparently find crops turning out better than earlier anticipated. One feature deserving attention is the reported less noteworthy buying of complete new stocks of goods, which is apparently a result of money conditions. Quite a few cities report trade as a whole ahead of the fall season of 1906, the crop outlook in those sections no doubt influencing buying. Collections show improvement in different localities, but as a whole are still slow. Demand for money is certainly very active, and there is a higher range for time money noted at the west, while rather more ease is noted at the east, and European acceptances of American bills are freer. Crop conditions vary with sections and crop reporting. Corn has been helped by warmer weather, but needs a long warm fall season if a full crop is to be had from the record acreage. Cotton reports range from good on the Atlantic coast to poor in Texas, the latter because of drought. Oats is the shortest crop in fourteen years. Spring-wheat cutting is completed, with irregular yields. In connection with this matter of ascertained short crop yields, it might be stated that the feeling is that higher prices for all grains and cotton will go far to make up for smaller quantities harvested. Certainly, foreign buying of our grain and flour has been more notable of late, and this explains the higher range of cereal prices touched this week; wheat futures are 5 cents, corn 2 cents and oats 5 cents up, while cotton holds firm at close to the highest of the year.

In some of the leading industries the conditions are likewise irregular. Cotton-goods manufacturing is active and mills are all sold up. Iron and steel mills and furnaces are actively engaged on old orders, but report new business light, and prices are easing. A reduction of 4 cents per pound in "official" copper prices has not elicited much new buying. In the eastern shoe trade orders are not as large as usual for fall, and a short season is predicted. Leather is in hand-to-mouth demand, with present stocks largely made from hides worth 3 cents more than current offerings. Money market conditions limit new buying of wool, and men's-wear woolen demand for next spring is reported not up to expectations. Bank clearings for August were smaller than in July, or in August a year ago, because of New York's heavy decrease. Weekly reports show more decreases outside the metropolis than earlier in the summer. Failure returns show some effect of the money stress, but the August total number is, next to August, 1906, the smallest recorded in that month since 1893. Building returns for August thus far received show decreases from July and from August a year ago, and material is less in demand.

Reports to BRADSTREET'S from forty-one American cities show a total estimated expenditure for building in August of $34,627,376, a decrease of 3.4 per cent. from July, and of 3.3 per cent. from August a year ago.

Crop reports are irregular. Spring-wheat harvesting has been completed in the American northwest. Yields are irregular, some threshings being reported as very light, but, on the other hand, there are reports that the yields are really better than earlier expected. That recent rains have done some damage to the quality of harvested grain seems probable. Spring wheat in the Canadian northwest promises a total crop little below last year, lighter yields being offset by increased area planted. Eastern Washington reports damage done to harvested wheat by rains. Corn crop reports are, on the whole, good, but the lateness of the season demands exceptionally favorable weather conditions, particularly an absence of frost, till very late, say September 25 to October 15. Oats crop reports are no more favorable, and the yield, it is claimed by some, will not be over 700,000,000 bushels, or the shortest in fourteen years. Cotton crop reports vary. Conditions are good in the south Atlantic states, though parts of Georgia and Alabama are too dry, and deterioration is reported. In the lower Mississippi valley the situation is very good, and Arkansas reports little deterioration, but continued dry weather all over Texas has probably reduced the crop of that state seriously. Other late crops are doing fairly well. California crops promise better than a while ago. The Louisiana sugar crop is the largest and best ever made. Rice is a fair-sized crop of good quality. The tomato crop in Maryland and Delaware will be a good one. A crop of potatoes in Aroostook county, Maine, of about 75 per cent. of an average, is indicated.

Improved money market conditions lead to increased bullish sentiment among speculative stock market interests. The trading this week has exhibited a disregard of unfavorable factors, and a decided tendency on the part of traders to work on the bull side. Foreign purchasing of stocks has been resumed, although on a limited scale, but public participation is still restricted to very narrow proportions. The bond market is dull, awaiting the outcome of the New York City 4½ per cent. bond subscription next week, which it is expected will be successful and include foreign participation. Older issues are irregular. Foreign exchange is steady at a decline, which renders further gold shipments impracticable, the feature in that market being considerable offerings of both commercial and finance bills, with better reports as to the financial position abroad. Demand sterling is 4.86.15@4.86.20.

New York City bank clearings still tend to shrink, while those of most other cities still show gains. Thus, at ninety-seven cities, for August, the clearings aggregate $11,561,011,160, a decrease of 5.6 per cent. from July, and of 11.1 per cent. from August, 1906. New York City clearings are 21.9 per cent. smaller than in August a year ago, while those at ninety-six other cities are 11.6 per cent. larger than a year ago. The middle group alone shows a decrease, and New York, with a few other cities, only show losses from a year ago. Eight months' clearings are 3.2 per cent. smaller than a year ago owing to New York's loss of 10.2 per cent., as the ninety-six other cities, combined clearings show a gain of 10.3 per cent.

August failures in number show little effect of the money stringency or of the predicted recession in trade, they being the smallest reported in that month, with the exception of August, 1906, since 1892. Liabilities are smaller than in August, 1906, when several bank suspensions swelled liabilities abnormally, but also because several large suspensions reported last month are expected to result in no loss to outside creditors, and are, therefore, not included. There were 669 failures in August, 1907, an increase of 6.3 per cent. as compared with August, 1906. Liabilities aggregated $9,396,957, a decrease of 4.5 per cent. from August a year ago, but are 22 per cent. larger than in August, 1905. Failures for eight months are still slightly less in number than a year ago, but liabilities are 16 per cent. larger.

While pig iron is extremely quiet and prices are weaker, southern grades particularly, there is evidence that some buyers are testing the market at the lower prices, but thus far only a small amount of business has developed. Fewer transactions in resale iron are noticed, now that the market has worked down to a lower level. Bessemer pig is quiet and easier in price, $21.50@$22, valley furnaces, being quoted. In finished lines specifications on old orders are heavy, and the steel plants are being operated at high speed, but new business is much lighter. Yet demand for structural material keeps up remarkably well. Steel rails show slightly more activity, and it is stated that additional reservations of mill capacity for 1908 have been made by leading roads, the rails to be rolled in accordance with specifications to be agreed upon later. The principal producer has increased wire products $1 per ton. Demand for those products has been very heavy for a long time back. Tinplate is quiet, but there are signs of improvement. Machine tools are active and merchant pipe is in good request. Old material is still weak. Coke is firm and demand is good. Bituminous coal is higher, business is of goodly proportions, and desirable grades are in short supply. Copper, spelter and tin are lower. The "official" price of electrolytic copper has been reduced from 22 cents to 18 cents per pound, but conditions have been such that independent interests have been quoting 17½ cents for the past three weeks or so. While some new business has cropped up, buying, on the whole, is of a hand-to-mouth character, and little change is expected at this time, as consumers are not fully satisfied as to the permanency of prices. In fact, as the week closes, freer offerings here and abroad are reported, and lake copper was quoted in the New York market at 17¼ to 17¾ cents, while 17 to 17½ was named for electrolytic. Sheet copper has been reduced from 28 cents, which was fixed in July last, to 24 cents a pound, this being the second reduction of the year, as high as 32 cents having been obtained prior to July.

Bank clearings for the week ending September 5 (a holiday period) aggregate $2,145,293,000, 3 per cent. under last week and 22 per cent. below this week last year. Outside of New York exchanges amount to $931,738,000, 1 per cent. under last week, but 3 per cent. over the week last year.

Business failures for the week ending September 5 number 130, against 167 last week, 121 in the like week of 1906, 137 in 1905, 144 in 1904 and 165 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending September 5 aggregated 2,923,710 bushels, against 3,808,866 bushels last week, 2,466,032 bushels this week last year and 4,406,064 bushels in 1901. For the first ten weeks of the fiscal year the exports are 29,209,116 bushels, against 25,672,631 bushels in 1906-07 and 62,955,209 bushels in 1901-02. Corn exports for the week are 507,104 bushels, against 798,071 bushels last week and 328,179 bushels in 1906. For the fiscal year to date the exports are 13,137,680 bushels, against 6,457,254 bushels in 1906-07.

IN CANADA.

Canadian trade reports are good; wheat-crop advices are more reassuring as the harvest, which is now general, advances, and there is less apprehension that tight money will unfavorably affect commercial operations. Collections, however, still show a dragging tendency the country over. Montreal reports wholesale trade good, retail country trade affected by harvesting operations, dry-goods demand and prices are firm, and export trade is active, though trade in dairy products is lighter because of lessened movement, largely attributed to dry weather affecting pasturage and checking production. Toronto trade has been stimulated by the annual exposition, and while some crops, notably fruits and vegetables, have been curtailed by dry weather, the outlook is for a large fall trade. Winnipeg reports wheat harvesting in full swing, and the total crop will be little below a year ago, lessened yield being counterbalanced by increased acreage. Business is brisk in British Columbia, with mining and lumbering specially active. Lumber trade expects a quieter period. Collections are good. Agitation against Japanese immigration promises to become a political issue. August failures numbered 103, as against 76 in August a year ago, while liabilities were $949,908, as against $368,962 in August a year ago. Clearings in August at eleven cities showed a gain of 11.7 per cent. over the same month a year ago, while for eight months the increase over 1906 was 10.9 per cent. Weekly clearings aggregate $70,556,000, a decrease of 6 per cent. from last week, but a gain of 3.5 per cent. over this week a year ago. Failures this week number 15, as against 29 last week and 14 in this week a year ago.

TRADE REPORTS.

At New York business in dry goods continues active in all branches, cotton goods still maintaining the lead at firm prices. Dress goods and silks are also in demand for immediate delivery, and considerable orders are being placed for spring. Woolens for men's wear show some improvement. Other departments are getting a fair share of attention, and the clothing trade is steadily improving, but collections are still somewhat behind, though at the present time there is not much falling due, and it is too early to expect anticipation of fall payments. The cloak, suit and waist trades show a steady increase, out-of-town orders for future delivery being liberal. There is, however, general complaint of poor collections. Retail trade is doing an end-of-the-summer business, but it is a little slow, and most houses are now getting ready heavier clothing for fall trade. In wholesale notions a fair business is being done. Collections are poor. Manufacturers of buttons are fairly busy. Receipts of butter, eggs and cheese are only moderate; demand is good and prices firm. The poultry market is weak on heavy supplies. Trade in groceries at retail shows a moderate improvement. The market has been well supplied with live stock, receipts being in excess of those for the corresponding period last year. The better grades of dressed meats are in good demand and prices very firm. The local strike has somewhat interfered with deliveries. Hard fiber cordage appears to be less in demand, but first grades of manila cordage are in fair request and prices are steady, but those for lower grades are uncertain. Trade in automobiles and sundries is, on the whole, fairly satisfactory, but the money market and weather conditions have somewhat affected the local trade and resulted in getting prices down to a level that is considered fair to producer and consumer alike. Copper is lower, lake being quoted at 18⅛ cents and electrolytic at 17½ cents per pound. Some covering of wants has been noted by consumers at this level, but no large orders have so far been placed. Pig iron continues quiet. Structural steel is in demand and collections are easier. Pig tin is also in better demand, but the pig-lead market remains quiet. Machinery dealers report business up to the average, but collections are disappointing. Business in leaf tobacco is quiet, though prices continue firm. Manufacturers of cigars are fairly busy and demand has increased. Prices of the raw material are still high, and it is said there is a prospect of labor troubles. Prices have not advanced, but it is thought probable that they will. Business in drugs and chemicals is fairly active, though collections are slow. The hide and skin market is dull and tanners are curtailing production or practically shutting down in some lines. Shoe manufacturers are holding off in the hope of a break in price. Manufacturers of pocketbooks and kindred leather goods are buying in fair quantities, after an unusually dull summer season. Real estate is quiet. Paper at wholesale is in very fair demand, and in one branch the price has again been advanced. Hay and straw are active, demand for first grades being good and prices firm.

The following telegrams show trade conditions at the cities mentioned for the week ending September 6:

BOSTON.—In the dry-goods market the attention of jobbers and retailers is now more fully given to fall trade. Shipments to retailers are being made in large volume, and preparations have been made for a heavy business to come. In the primary market there is a general sold-up condition, with no stocks on hand for quick deliveries, and prices are up to an extraordinary high level. In buying for requirements beyond the current season conservatism is shown, although purchases are to some extent induced by the feeling that goods are to be scarce. Desirable lines of leather are firm, though lots that are imperfect are neglected and weak. Sole leathers are in strong position so far as supply governs, curtailment leaving practically no surplus stock in sight. Buying in both the shoe and the leather market continues of a hand-to-mouth character. Fall run of manufacturing promises to be short. Hides are somewhat stronger as a result of free buying in the principal market. Chemicals are seasonably active, prices are generally well maintained. The movement in drugs compares favorably with that of the corresponding period a year ago, and price changes are without notable features. Dyestuffs and tanning materials are only moderately active, with quotations steady. Business in bituminous coal is very good, but complaint is made of slow shipments from the mines. Anthracite is fairly active. Trade in northern and eastern lumber shows some improvement, with prices firm. Business in southern lumber is fair, while in hardwood, outside points report an active business, but the local market is very quiet. In building supplies, bricks are more active, but lime and cement continue quiet. Trade in furniture, carpets and upholstery is improving as fall approaches and indicates a good volume of business for the coming season, but collections continue slow.

PROVIDENCE.—There is a general clearing up of summer stock in retail fancy and dry goods. In the building line, aside from heavy construction work, business is quiet. Textile manufacturers show a considerable volume of business, cotton goods especially being strong. Collections are fair.

PORTLAND, ME.—Potato crop conditions in Aroostook county are more favorable, and three-fourths of an average crop is expected.

PHILADELPHIA.—The wool market shows little change, demand is moderate and prices well maintained. Carpet wools are sluggish, and there seems to be little demand for low-grade stocks. New business in cotton yarns continues quiet, and concessions in price are necessary to move any quantity. Notwithstanding this, textile manufacturers are apparently busy filling orders now on hand and which are said to show a fair margin of profit. The jobbing dry-goods and notion houses have had a fair trade and report collections somewhat improved. Retailers are clearing up stocks and getting ready for fall business. There is little doing in flour, but prices are firm to advancing, in sympathy with wheat. Chemicals and dyestuffs are slightly more active, though still reported dull. Paints and glass are moving freely, and manufacturers and dealers report an active business at satisfactory prices. Lumbermen report a slight dullness and some difficulty in getting material forward, but the market is satisfactory for the time of year. Hides and skins continue weak, with no demand, full supply and prices off, buyers still being out of the market. These conditions are reflected in glazed kid and goatskins, with spasmodic business and no material change in prices. Boot and shoe dealers report a fair business, with prices unchanged, and manufacturers are reported moderately busy. Tobacco sales are confined to small lots, buyers waiting for new goods now being sampled. That crop (1906), while large and fine, may cost more money, as the 1907 crop (now growing) promises to be small and short in quantity. Collections are slow. Liquors are quiet, fall trade not having opened. There is no material change in the situation of iron, extreme quiet continuing and prices being weak. Domestic anthracite advanced in price September 1, in anticipation of which there was increased buying. Bituminous coal shows improvement, with prospects of a good fall and winter trade growing stronger.

PITTSBURGH.—The pig-iron market is absolutely featureless and there does not seem to be any movement on the part of either buyers or sellers, no sales and no inquiry being reported. But little iron is available for delivery during the balance of the year, though practically all of the first half of next year is in the market. The total tonnage of Bessemer sold in this district during August was 21,000 tons, and the average price at the furnaces was $22 per ton. Owing to the sold-up condition of the furnaces and the pending ore shortage, it is probable that present prices will be maintained for some time. Coke is in good demand, and, there being but little surplus, prices are holding firm. In finished lines of iron and steel new business is still slow in coming forward. Pig-iron quotations for spot delivery at the valley furnaces are as follows: Standard Bessemer, $22; chilled basic, $21; No. 2 foundry, $21.25, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.80, and foundry coke, $3.25 to $3.50, at the ovens.

BUFFALO.—Trade is about normal for the season, but purchases are made on a more conservative basis. Collections continue slow.

BALTIMORE.—Jobbers and manufacturers concur in the opinion that fall business is well ahead of 1906. The only deterrent factors are backward collections and tight money. Late reports concerning crops are favorable, and with anticipated good prices for the same, it is the belief that some improvement in money conditions will develop later on. Out-of-town buyers from the far south are about rounding out their purchases, but there are many late arrivals still here, mainly from Virginia, North Carolina and West Virginia, and house trade this week is very brisk. There is apparent, however, an undercurrent of buying as near requirements as possible, due in a great measure to unsettled prices. Good-sized orders are being placed for boots and shoes, values of which remain firm, with collections fair. Clothing manufacturers report a satisfactory business in point of volume, but collections are slow. Hardware is in demand, with values very firm and collections nearly up to normal. Trading in paper at wholesale is fairly active, with prices unsettled and an advance of about 5 per cent. noted in all grades of book papers, in sympathy with rising prices for raw material. Harness manufacturers are well employed on both old and new business, but complain of slow collections. Millinery jobbers are exceptionally busy, house trade being very heavy, with indications of a record-breaking season. Collections are well up to the average for this period of year. Crockery and glassware jobbers report business ahead of last year, with slight improvement noted in collections. Dry goods continue very firm, with a scarcity in brown cottons. Mill deliveries are rather easier. Sales are good, but collections are very slow. Both city and out-of-town business in groceries shows improvement. Collections, however, are not above fair. Active demand continues for Maryland leaf tobacco at unchanged prices.

CINCINNATI. — General business is above the average. Factories and builders are busy. Demand for money is greater than the loans, and money is not plentiful. Corn and tobacco need more sunshine and warm weather to cure them before frost.

CHICAGO.—Good progress has been made in the jobbing trade and sales show a fair increase, with dry goods in the lead. Sales of the latter are in larger lots, but a feature of the trade this fall is the absence of important buying of new stocks. This is due to the generally unsettled condition of financial affairs and to tight money. Taking conditions on the whole, the trade is in good shape throughout the west. The banks are doing a large business and making more money than in recent years, owing to high rates of interest. Farmers are getting more money for what they have to sell, and the increase in prices offsets the loss in yields in bushels, and railroads are having a larger traffic. Buying of pig iron is confined to small lots, and there is no disposition to load up. Local furnaces have a liberal tonnage booked ahead and are not increasing their stocks. Prices are easy and a further shading is under way. Purchases of finished materials are of moderate size. Railroads take small lots of steel rails, and structural material is in good request. Coke is strongly held, with local furnaces sold ahead. Coal is selling more freely. Lumbermen report increased sales to the local and interior trade, and prices hold well. Leather sales have been increased by the leather exposition held here the past week. Groceries and other lines are selling in a moderate way. Butter and eggs advanced. All live stock is lower with liberal arrivals. Money is firmer, with rates higher. Collections are rather slow and are behind this time last year. Spring wheat is about all cut in the American northwest, and cutting is well under way in the Canadian northwest. Some damage has occurred from recent frosts both this and the other side of the international line, but it is impossible to tell how much until the grain is threshed. The limited threshing in Minnesota and the Dakotas indicates lighter yields than expected, some showing 3 to 15 bushels per acre, and one field of durum going 8 bushels. Corn has made good progress owing to recent hot forcing weather, but a return of lower temperatures has delayed the maturing. The best fields in Illinois and Iowa will be out of danger of frost by September 25 to October 1, but a larger percentage of the crop in the best sections of the corn belt require until October 15 to mature. The crop is more irregular than usual, and some of the late corn will not be matured until after October 20. Threshing of oats has been resumed and is nearing completion, but the crop is remarkably light—under 700,000,000 bushels, the smallest since 1893. Prices are also exceptionally high. Marketing of all grains is of moderate volume.

PEORIA —Trade in general is fair, but collections are somewhat slow.

LOUISVILLE.—Country merchants are here in fairly large numbers, but are buying very conservatively. Dry-goods jobbers report business fairly good. Clothing is quiet. Distillers of and dealers in whiskey report the fall season opening well and look for a large trade. Drug and grocery wholesalers report business fairly good. Collections are only fair.

TERRE HAUTE.—Business is active. The present season has been the most prosperous in the history of the clay industry, all factories having been crowded with orders, some of which manufacturers were unable to fill. Some plants will be kept in operation throughout the winter. Glass plants have reopened.

ST. LOUIS.—Many country merchants have completed their purchases and returned to their homes, but there is still a large number of buyers in the city. Jobbers are busy shipping fall orders. In nearly all lines the volume of business has been largely in excess of last year at the same period, and with the remainder of the year yet before them, the outlook is very encouraging. Some manufacturers are still handicapped on account of being unable to secure enough experienced help. Manufacturers of stoves and castings report business very brisk. Hardware is active at firm prices. Building material shows a falling off as compared with a year ago. Lumber is normal at steady prices. Flour is very active at advanced prices. Sales of wheat and flour for export continue to increase; prices are firm, with an upward tendency. Banks have shipped considerable money to the interior during the past week and have also had a heavy demand from local borrowers; rates are firm at 6 per cent. Weather conditions have been favorable to corn, but hot weather is needed to fully mature it.

KANSAS CITY.—House sales have been heavy with jobbers in dry goods and kindred lines, the result of the last of the series of meetings of country merchants. Purchases have been freely made, increasing the volume of sales over previous meetings of the kind. Trade in groceries, provisions, hardware and drugs is active. Jobbers in implements report a good business, and country collections are good. Retail trade is fully up to expectations. Corn is maturing under favorable conditions, and the yield in Kansas exceeds earlier predictions and is not far from an average crop.

MILWAUKEE.—Trade is fairly good in most lines. Collections are a little slow.

SIOUX CITY.—Trade and collections are good. Good rains have fallen, and with normal conditions a good corn crop is assured.

DAVENPORT. — Retail trade is fairly active, while wholesale business is about equal to last year. Collections show some improvement, but are still slow. Corn has made fairly good advancement and will be out of danger if frost holds off until October.

ST. PAUL.—Current business is not very active in some lines, but the large increase in business for future delivery makes the outlook very promising. The state fair has brought many merchants to this market, but there is little buying and hardly any offers for bankrupt stocks. Jobbers are pleased with the situation, not because of a large crop, but because every one was prepared for a poor one and it proved to be fair, with prices beyond expectations, which will insure better returns than last year. The favorable weather at the ripening period is looked on as providential. Country merchants will clean up their accounts better than ever, the anxiety of the farmers having induced few purchases of machinery this year. Collections for August were about 10 per cent. in excess of last year, and money keeps on coming in nicely for the season.

MINNEAPOLIS.—The state fair has brought in a large number of country merchants and jobbers in all lines have been very busy. Orders have not been large, but have been very numerous. Collections are reported satisfactory in most localities.

OMAHA.—Trade in all lines continues fairly active, and prospects appear good. Collections are quiet. Crop reports are favorable.

LINCOLN.—Business shows a slight improvement. Collections are fair.

CHARLESTON.—Wholesale dealers in dry goods, shoes and clothing report business good. Collections have also improved. The cotton crop is in excellent condition.

RICHMOND.—In some lines there is evidence of improvement. Jobbers of dry goods report sales slightly in excess of the same period of last year, and prices are fair. In millinery there has been a good early trade, and prospects are for a satisfactory season. Dealers in shoes, hats and clothing have made their usual preparations for the next spring season and will extend the territory covered. They are now closing a favorable season, with sales equal to expectations. Building is less active than for several months past, and building material has declined in price. Retail trade is at the usual end-season dullness. Some are displaying fall samples, but sales are only nominal. Reports in regard to the cotton crop in eastern North Carolina continue favorable, and the same is true of tobacco, though the latter crop in some sections will be short. Collections are backward.

SAVANNAH.—Conservative authorities still estimate a depreciation of 15 to 20 per cent. in the cotton crop from first reports. Drought in some sections was relieved Wednesday by rain and conditions were somewhat improved. A 2,000,000-bale crop from Georgia is predicted. Collections are improving.

AUGUSTA.—Trade is improving. Collections are fair. The weather is very favorable for new cotton, which is now arriving daily.

ATLANTA.—Jobbers in dry goods, shoes, notions and millinery report increased sales and prospects for future business as good. Other lines also report sales active and collections improving. The hot spell is reported to have slightly damaged cotton, but general rains have fallen during the last few days and prospects for a normal yield appear good. Some few new bales have already been put on the market at fancy prices.

MACON.—Indications point to a small crop of cotton. Trade and collections are improving, as cotton is being put on the market.

BIRMINGHAM.—Southern foundry No. 2 is not easier. Trade in general is a little dull, with slow collections. Real estate is not so active. Lumber is slow.

MOBILE. — Jobbers report sales increasing. Prospects for a good fall appear bright. Collections are improving. Cotton is opening up satisfactorily, and with a late fall a good crop will be made.

MONTGOMERY.—Trade continues quiet in practically all lines, especially retail. Collections are poor. The past ten days have marked some deterioration in the cotton crop in all sections of this state. There has been a drought in many parts and bolls have been opening prematurely. It is now thought that there will not be more than a three-quarter crop, and it is generally believed that the crop will be smaller than last year's.

CHATTANOOGA.—Business in all lines is good. Collections are fair to good.

MEMPHIS.—Cooler weather is stimulating retail and wholesale business. A good season is anticipated. Collections are fair. Cotton is making good progress. The first Shelby county bale was received Monday.

LITTLE ROCK. — Business with jobbers continues fairly good, but not quite up to expectations. Retailers are not complaining, and collections are improving. Cotton has not deteriorated any during the past week, and picking will be general in about three weeks.

NEW ORLEANS.—Retail merchants report a satisfactory volume of business. Jobbing trade is fair, with good prospects. Collections are fair. Rice is being harvested and is coming to market. The quality is good, prices are good, and there will be a fair yield. Sugar cane prospects are the best in the history of the industry. Cotton is doing splendidly. Weather conditions are very favorable, and insects are doing little damage. The usual scarcity of labor will be experienced as the season advances.

FORT WORTH.—Drought is still unbroken, and the ranges as well as crops are suffering in many sections. Trade is fairly good, but collections are slow.

DALLAS.—Trade with jobbers is fairly active. Collections are quiet. The weather is still excessively warm and dry and rain is badly needed. Indications are that cotton will be considerably short.

WACO.—Trade is fair and collections are slow. Continued dry, hot weather is unfavorable to cotton.

SAN FRANCISCO.—Crop conditions are favorable. Considerable activity is shown in reconstruction. Collections are very slow.

SPOKANE.—Business conditions continue good throughout this section. Rains during August damaged grain somewhat, but the outlook is for a large crop.

SEATTLE.—Trade continues good. Collections are fair.

TACOMA.—Trade is good. Collections are fair.

PORTLAND, ORE.—The Columbia river salmon pack is less than half the estimated output. Favorable weather conditions now prevail. General trade is excellent in all lines.

TORONTO.—Trade here has been helped by the annual exposition bringing large numbers of country merchants and visitors to this city, and all lines of wholesale trade report considerable ordering. The retail trade here has also reaped benefit. All branches of trade report a continued excellent outlook for future business. Harvesting is pretty well over in this part of the country. While lack of rain has had an effect upon the yield of grain in some districts, there has been no damage sufficient to much affect business. The crops of apples and peaches are reported to be light from the same cause. The dry-goods trade continues brisk. The fall millinery business has been the heaviest in years. Orders have been large and generally for an excellent class of goods. A good trade is moving in groceries. Canned goods continue very firm and active. A good trade is moving in hardware. Metals are active and generally steady. Country trade has a quiet tone, but collections are generally fair.

MONTREAL.—Wholesale trade is good and manufacturers are as busy as ever. Retail trade is naturally a little slow, harvesting operations interfering with country trade. Collections are not coming forward well, but improvement is looked for as the crops are marketed. There is now little apprehension regarding the continued firmness in the money market. Shipments of dry goods continue very heavy, and even now excellent orders for fall and winter lines continue to come in. Values of textiles are exceedingly firm and mills have large orders on hand. A heavy millinery trade is now being done. Groceries are moving well; prices are generally steady to firm. Hardware lines are moving briskly. Prices of metals are firm despite an easier tone to foreign markets, and the demand holds active. The shipping trade shows a good volume, but exports of dairy products are not heavy. The make of both butter and cheese has been comparatively light owing to poor pasturage. There has also been an excellent market for both commodities on this side. Butter deliveries for the season amount to only 48,000 packages, against 243,000 a year ago.

VANCOUVER-VICTORIA.—A brisk business is moving in all lines here. Continued activity in the mining and lumbering industries is responsible for a brisk demand for wholesale goods for all parts of the province. Values are generally firm. Considerable agitation against Japanese immigration is on foot, and the matter is becoming a big political factor. Smelting furnaces are handicapped by a shortage of coke. There is talk of the erection of great iron and steel works on this coast. The lumber trade is expecting a slightly quieter period after the rush of the year. Prices are steady. Collections throughout the province are generally good.

WINNIPEG.—Harvesting operations are in full swing, and it is possible to pretty well say how crop results are going to be. Generally speaking, the yield is lighter than that of last year, but increased acreage and higher prices will bring the total result about up to the record of a year ago. Business men look toward the future with confidence, and general wholesale orders confirm expectations of a good season's business. In some districts the lateness of the crop has caused some fear of frost, but harvesting may be completed before this happens. The dry-goods trade is brisk, and heavy shipments of groceries are being made. Values are firm. Collections are still slow.

FINANCIAL.

Money Market.

The effects of the Treasury's policy of increasing government deposits in national banks were shown by the New York Sub-Treasury's having lost $1,500,000 to the banks this week, while the interior demand was greatly modified, and on the total cash movement for the week the banks have apparently gained over $2,000,000. Furthermore, foreign exchange has been weak under offerings of not only commercial but of finance bills as well, and the improvement in the financial position abroad is accompanied by a renewed willingness to discount freely at London. The tone of the New York loan market has accordingly been much easier, particularly in respect to time money, which was offered with comparative freedom at concessions from last week's rates, ninety-day loans being quoted at 5½ per cent., while "over-the-year" money could be obtained at 6½ @6 per cent. It was noted, however, where 6 per cent. was quoted for the latter kind of arrangement, the lenders were inclined to insist on high-grade collateral. Commercial paper was still quiet, but a little out-of-town buying was reported at 7@6½ per cent. for double names. The call-money market was well supplied, with 3 per cent. as the quotation for renewals. Toward the end of the week the tone was slightly firmer in view of preparations for the New York City bond subscription on next Tuesday, while the fact that participants in the Union Pacific convertible bond underwriting have been called on to take up their proportions of the security on September 16, which calls for about $38,000,000 on that date, also had some effect.

New York Banks.

The fact that last Saturday's Clearing House statement displayed a shrinkage of only $166,600 in the average loans of the New York institutions would seem to indicate that the stock market liquidation had subsided and that fresh borrowings in that quarter had been in progress. On the other hand, the decrease in the cash items of $1,651,900 was close to the estimated actual loss from the weekly movement of currency. The curtailment of deposits, amounting to $1,727,800, agreed very closely with the other changes and made the reserve requirements $431,950 less. As a result, the surplus reserve decreased $1,651,900, rendering the statement of comparatively little importance.

	August 31	August 24	Changes

Foreign Exchange.

During the past week the foreign exchange market at New York developed more or less weakness. Posted quotations remained unchanged at 4.83@4.87, but demand sterling sold down to as low as 4.86.10, while long bills were quoted at 4.82.20. At these figures further gold exports, even if they were made as special transactions, like the $1,500,000 which was dispatched to Germany during the preceding fortnight, would be unprofitable. The cause for the downward movement was the rather free offerings of commercial bills, one of the features being the appearance of considerable amounts drawn in connection with future shipments of cotton. The more favorable financial position abroad had an effect and led to a renewed willingness on the part of foreign banking houses to put out finance bills, which also influenced the exchange market in the direction of lower quotations. In this connection the possible participation of foreign interests in the subscription next week for the new issue of New York City 4½ per cent. bonds was also an element.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.75; commercial bills, 4.81¾ @4.82½; francs, 5.20⅝ less 1-64@5.16⅞ less 1-16; reichsmarks, 94⅛ @ 94 15-16 plus 1-64.

The Bank of England's discount rate is unchanged at 4½ per cent. Its report for the week ending Thursday showed an increase of £495,342 in gold held, and the proportion of reserve to liability rose from 49.40 per cent. to 50.03 per cent. In the London open market call money is 2@2¼ per cent. and discount is lower at 4¼ @4 per cent. The Bank of France reported a loss of 10,875,000 francs in gold and an increase of 124,100,000 francs in note circulation. Its rate of discount is unchanged at 3½ per cent., the Paris market quotation being 3⅜ per cent. At Berlin the bank rate is still 5½ per cent. and the market quotation for discount 4¾ per cent.

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending September 5 shows an aggregate of $2,145,293,000, as against $2,213,988,000 last week and $2,774,439,000 in the corresponding week last year. Canadian clearings for the week aggregate $70,555,000, as against $75,616,000 last week and $68,142,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

New York Securities Market.

In the main the stock market during the past week has shown a continued disposition to adopt a more favorable view of the financial and speculative situation. When trading was resumed on last Tuesday after the three days' holiday, it quickly became apparent that professional operators were generally ranged upon the bull side, and this, in spite of some temporary efforts on Wednesday by bears to test the market, continued to be their attitude during the rest of the week. It cannot be said that there was any decided increase in public participation, but for the first time in some weeks London was a buyer of securities, and it would, in fact, appear that the improvement in money market conditions, which is common both to European centers and New York, has had its [illegible] operations in American securities. The most important factor bearing upon the action of the stock market was, in fact, the easing of money rates, which, so far as New York is concerned, is mainly the result of the policy adopted by the Treasury in connection with the increase of government deposits in the national banks. This, as is explained elsewhere, has caused a relaxation in rates for time money, the further presumption being that Secretary Cortelyou's readiness to increase the amount of government funds on deposit in the banks by $5,000,000 each week offers a safeguard against positive stringency. At the same time it is noted that foreign exchange has fallen to such a level that gold exports are no longer feared, while not only is money easing at London, but the alleged boycott of American finance bills there has disappeared, and this week has seen a renewal of the lending of foreign money in the New York loan market, though such transactions were apparently on a moderate scale. More or less attention continues to be given to the prospect for the success of the New York City $40,000,000 4½ per cent. bond issue on next Tuesday, and this is considered as one of the bullish features. There was some disappointment that the expected grant of immunity to the Chicago & Alton Railroad did not materialize, the final decision in the matter having been postponed, and, on the other hand, the postponement of one of the government's cases against the Standard Oil Company was received with favor.

As is mentioned above, there was some renewal of bearish activity on Wednesday, but the declines were moderate and no large amounts of stock seemed to be forced out, while on Thursday the underlying strength of the situation was signally exhibited by the manner in which prices rallied in the face of the announcement of the failure of a stock and grain house of some note, and the passing of the dividend upon Interborough-Metropolitan preferred. It may be said of this last event that it had been foreseen and discounted, the stock actually rallying a little when the news was made public. It may also be said that the reduction of copper prices by the leading producers to 18 cents failed to have an unfavorable effect on Amalgamated Copper, Wall street holding that this action will lead to renewed selling of the metal, while the stock, it is urged, is much lower proportionately than copper itself, even at the present reduced quotations. The announcement that Burlington stock had been placed upon an 8 per cent. basis, with an extra dividend of 6 per cent., was followed by a very sharp rise in the Hill stocks and by sympathetic action on the part of Union Pacific and the Harriman group, the general list being also influenced to a marked extent. The market was again very strong on Friday after some early hesitation, the lead being taken by the Harriman and Hill securities.

Boston Stock Market.

August 8	3,272,993	2,262,961	865,002
August 15	2,947,433	2,827,954	1,068,519
August 22	3,565,347	3,196,375	1,170,340
August 29	3,808,866	5,081,999	1,429,250
September 5	2,923,710	2,466,012	1,191,215
Largest exports in 1907, week ending June 6			5,263,138
Smallest exports in 1907, week ending April 11			1,831,105
Largest recorded exports, week ending Aug. 11, 1901			9,039,761
Smallest recorded exports, week end'g Feb. 16, 1905			536,540

Cereal Exports, with Destinations.

The exports of wheat and corn (in bushels) and of flour (in barrels) from the United States and Canada (coastwise shipments included), with ports of destination, for the week ending August 29, 1907, follow:

To	*Wheat*	*Corn*	*Flour*
Liverpool	462,393	78,763	10,165
London	439,384	178,584	41,037
Bristol	144,466	2,571	8,888
Glasgow	302,381	57,043	47,264
Leith	....	....	....
Hull	....	....	....
Newcastle	....	....	....
Manchester	40,269	27,772	....
Belfast	....	....	....
Dublin	80,020	17,902	16,884

Boston Shoe and Leather Market.

All desirable lines of leather are in fair demand, but on a hand-to-mouth basis. Buyers appear to be afraid to buy in advance to any marked degree, hoping for concessions later, but stocks are not large and were manufactured from hides that cost 3 to 4 cents per pound more than present prices average. Dealers are confident that prices will hold for the season. Hides are reported stronger on free buying by sole and upper leather tanners, surplus stocks having been much reduced. Shoe manufacturers are receiving orders for fall goods, but the season promises to be short. In fact, some factories are reported to have enough business for a few weeks only and are beginning to consider cutting on spring orders. Shipments do not hold their own as compared with last week's or last year's. The *Shoe and Leather Reporter's* figures this week are as follows: Last week, 91,006 cases; preceding week, 94,980; last year, 93,679; total for 1907, 3,309,783; total for 1906, 3,450,400; decrease, 140,617.

Wool Markets.

There is a better feeling in the market, partly owing to the improved financial situation and partly to the fact that the mills are very busy. The total sales for the week are smaller, even below the average, but prices have held very steady. Stocks in manufacturers' hands are light, but the largest buyers are still buying from hand to mouth, largely on account of the high money rates. Buyers are, however, watching the market closely, and any further easing of money would undoubtedly cause a rush of business. The market has been without feature in the way of large transactions, though there have been many small lots transferred, largely of territory wools. Among the sales of the week were Montana in the original bags at 25@27 cents, three-eighths blood Montana at 27@28 cents, fine staple Montana at 25@26 cents, fine clothing Montana at 68@70 cents scoured, fine medium clothing Montana at 65@66 cents scoured, fine clothing Idaho and Wyoming at 22@23 cents, fine medium at 25@26 cents, scoured territory at 68@70 cents for fine, 65@66 cents for fine medium and 58@60 cents for medium, both old and new wools, valley Oregon at 25@26 cents for No. 3, Texas twelve months at 26@27 cents, eight months at 23@24 cents, Ohio quarter blood fleeces at 31 cents, Michigan quarters at 30@30½ cents, and fine delaine fleeces at 39@39½ cents. Australian wools are very quiet owing to the scarcity of fine merinos. The bulk of the stock of foreign wool in Boston consists of New Zealand crossbreds, which are neglected. Boston dealers will turn more attention than ever before to the fine merino Australian wools, and buyers are starting for the sales at Sydney, Adelaide and Melbourne. Boston buyers will attend the London sales which open September 24, but little wool suitable for this country will be offered.

WORLD'S WHEAT CROP.

Broomhall estimates the world's wheat crop as follows. The figures are given in thousands of quarters, the quarter being equivalent to eight bushels:

	1907	1906	1905	1904
France	43,000	40,900	42,200	37,200
Russia	70,000	59,000	74,000	77,400

* Believed to have been overestimated.

A ten-year comparison of the yields of the United States, Europe and of the whole world shows the following interesting changes, in quarters:

	U. S. A.	*Europe*	*Whole world*
1907	73,000,000	207,040,000	378,040,000
1906	83,000,000	229,740,000	410,840,000
1905	76,000,000	227,500,000	401,070,000
1904	62,000,000	213,876,000	366,416,000
1903	71,000,000	233,853,000	404,483,000
1902	85,000,000	226,653,000	393,910,000
1901	94,000,000	184,400,000	347,973,000
1900	75,000,000	185,670,000	332,930,000
1899	73,000,000	189,110,000	328,452,000
1898	89,100,000	198,410,000	366,077,000

CALIFORNIA'S OUTPUT OF OIL.

The Los Angeles *Times* says: "California's oil production this year will be about 35,000,000 barrels. This is a conservative estimate. It is an increase over the figures of last year of between three and four millions. Every section of the field has increased its output except Kern River, but the increase is not as great, by far, as the amount of drilling would lead one to expect. At Coalinga, for instance, there has been a great extension of territory, but with the exception of the Lucile well, but little actual production up to date, except what will offset the inevitable decline in other wells and the shutdown of many of the wells of the California Oil Fields, Ltd., during the first three months or more of the year. Santa Maria is going to show the biggest increase of all, about 8,500,000 barrels for the total. Kern River will have to take at least second place and come behind Coalinga, and perhaps behind Santa Maria. Still, estimates may be found to have missed the mark widely when the last barrel has been pumped and more accurate statistics can be gathered. Santa Maria is more likely to be above rather than below the estimate given. Production, it should not be forgotten, means oil actually pumped or that has flowed from the well and been either shipped or stored above ground. It does not mean estimated capacity of wells, in the event of their being pumped, based upon what they have done on a test. Never before in the history of the California oil industry has consumption been so nearly even as now. There is little or no oil going into storage. The Standard is building no new reservoirs at Kern River, while much of its oil has been withdrawn both from that place and from McKittrick. Following is a table showing the output estimated for the different districts:

	Prod. '06	*Estimate '07*	*Increase*
Santa Maria	5,400,000	8,500,000	3,100,000
Coalinga	8,500,000	9,500,000	1,000,000
Kern River	11,000,000	9,500,000	*1,500,000
McKittrick	500,000	300,000	500,000
Sunset	300,000	300,000	....
Midway	....	300,000	300,000
Fullerton	1,700,000	2,400,000	500,000
Whittier	650,000	650,000	....
Los Angeles (city and Salt Lake)	1,700,000	2,400,000	300,000
Different districts:			
Newhall and Ventura	400,000	400,000	....
Other districts	65,000	70,000	5,000
Total	30,215,000	35,020,000	5,705,000

* Decline.

THE NEW CUBAN IRON-ORE FINDS.

"The iron-ore developments in the Mayari district of eastern Cuba promise to be the most important, if the carefully made estimates of the engineers are borne out, since the discovery of the Mesaba range in 1891," says the *Iron Age*. "Indeed, it was some years after Mesaba range ores came upon the market before any one, even in that time of extravagant claims, had the hardihood to estimate the ultimate yield of the new district at any such figure as is now put forth. Here is one indication, at least, of the change that has come over the ore situation in fifteen years: The Mesaba 'boomers,' whose claims of tonnage have been proved to be moderation itself, were freely branded as enemies of the new range and of the whole ore trade, because of the cheapening effect of their talk upon the prices of all lake ores. To-day a 500,000,000 or 600,000,000 ton addition to the supply of ores available to American steel works is announced without so much as a ripple in the ore market. Far from being a bear argument, it comes as so much reënforcement of the already strong position of the American steel industry. There is a difference between a blast-furnace capacity absorbing 15,000,000 tons of ore a year, as in the year of the Mesaba range's first shipment, and a capacity like that of to-day, requiring each year over 50,000,000 tons of ore.

"What, if any, portion of the Mayari ores will become available for other eastern steel makers is a matter for the future. Whatever tonnage comes to the United States will strengthen by so much the position of the east. That section has seen the disadvantage of even its partial dependence upon

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending September 5 shows an aggregate of $2,145,293,000, as against $2,213,988,000 last week and $2,774,439,000 in the corresponding week last [illegible]. Canadian clearings for the week aggregate [illegible]555,000, as against $75,616,000 last week and [illegible]42,000 in this week a year ago. Following on the detailed returns by cities for this week and th[illegible] with percentages of increase or decrease as compared with this week in 1906:

	September 5	*Inc.*	*Dec.*	*August 29*
New York	$1,213,555,000	....	35.2	$1,265,700,000
Chicago	207,242,000	12.8	....	214,074,000
Boston	108,844,000	....	15.6	122,212,000
Philadelphia	124,888,000	....	5.3	120,016,000
St. Louis	52,828,000	3.9	....	51,954,000
Pittsburgh	42,105,000	3.9	....	46,637,000
San Francisco	36,794,000	....	20.0	37,706,000
Portland, Ore.	27,077,000	[illegible]	[illegible]	would permit
[illegible]	38,537,000	[illegible]	[illegible]	broke, leaving the coarser
[illegible]	23,400,000	[illegible]	[illegible]	grades for the coal [illegible]et.

The day of a large steel plant at the tidewater outlet of the Virginia and West Virginia coal roads may not come in the near future, but it has doubtless been set forward by the development of the Mayari ores.

"It may be of interest to note that in the Swedish government report on iron ore, which attracted some attention last year, the United States was credited with 1,100,000,000 tons of workable iron-ore deposits. That report was accompanied by the claim, put forth on behalf of geological science, that the extent of workable iron-ore beds is known to within a margin of possible error not exceeding 5 per cent. The Mayari deposits alone, on the experts' estimate, supply more than a 5 per per cent. error in the Swedish estimate, which was about 10,000,000,000 tons for the entire world's supply. Therefore, taking no account of the probability that in the United States alone is more than half the amount above credited to all the iron-bearing countries of the world, the story of the new Cuban district is full of suggestion to the prophets of an iron-ore famine. Why should it be doubted that other hundreds of million tons will be added to the world's workable reserves when there is concentrated on the search a like combination of talent, determination and capital?"

THE FISHING INDUSTRY.

The following table, compiled by the Boston Fish Bureau, in which the north bay and shore catches are compared, tells the story of the decline of the salt-mackerel industry better than words:

	Shore	*Bay*	*Total*
1878	134,545	61,923	196,468
1879	209,803	10,796	220,599
1880	342,373	7,301	349,674
1881	291,187	470	291,657

1906	5,762	4,376	10,138
Total barrels	3,058,461	339,198	3,397,656

An analysis of these figures shows that for the first nine years of the period included in the tabulation the average yearly catch was approximately 281,884 barrels, while for the last twenty years the average yearly catch was a trifle over 43,000 barrels, the total average being 117,160 and a fraction.

In 1903 the catch was a little above the average for twenty years, but in no year since then has it nearly approached the average, and last year it was less than one-fourth of the average, or 10,138 barrels. In commenting on this the report of the Fish Bureau says:

"The production of salt mackerel shows a considerable decline. The Cape Shore fleet engaged in this branch of the industry was the largest for many years, while the total catch was the smallest; in fact, taking into consideration the large fleet, it is the smallest catch ever known.

"Canada has for the last twenty years exceeded the United States in the average size of her salt-mackerel product, according to a table showing the world's catch in barrels from 1878 to 1906, inclusive. But there, also, as well as in

New York Securities Market.

In the main the stock market during the past week has shown a continued disposition to adopt a more favorable view of the financial and speculative situation. When trading was resumed on last Tuesday after the three days' holiday, it quickly became apparent that professional operators were generally ranged upon the bull side, and this, in spite of some temporary efforts on Wednesday by bears to test the market, continued to be their attitude during the rest of the week. It cannot be said that there was any decided increase in public participation, but for the first time in some weeks London was a buyer of securities, and it would, in fact, appear that the improvement in money market conditions, which is common [illegible] to European centers and [illegible] Sept

1897	[illegible]	[illegible]	40,352	9,7[illegible]	[illegible],310
1898	14,286	24,913	54,261	8,[illegible]	102,245

1906	10,138	*30,000	*30,000	28,999	99,137

* Estimated.

"The total catch of fresh mackerel in 1906 was 35,240 barrels, as against 49,912 in 1905. This does not show that the fresh-mackerel business is increasing, but it would not be fair to draw conclusions from two years' catches, and there are no tables available showing the receipts of fresh fish for any considerable period of years."

In 1906, according to the report of the Fish Bureau, upon which these comparisons are based, there were landed in the ports of Boston and Gloucester—the salt fish, as a rule, going to Gloucester and the fresh fish to Boston—a trifle over 45,000 barrels of mackerel. The catch of salt mackerel alone twenty-three years ago, when there were fewer and smaller vessels engaged in the business, was 478,070 barrels.

The following table, compiled by the Fish Bureau, would indicate that codfish are growing scarcer, though not as rapidly as the mackerel. New England catch of codfish and other ground fish, comparing the Georges and New England shore catch with the grand and western bank for twenty-seven years, is as follows, figures being in quintals:

	N. E. shore and Georges	*Grand and western banks*	*Total*
1880	335,236	300,990	636,226

BRADSTREET'S
ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES, SINGLE INSERTIONS, DISPLAYED, 25 CENTS A LINE, AGATE MEASURE.

DIVIDENDS.

GENERAL ELECTRIC COMPANY.

A dividend of two dollars per share will be paid on [illegible]ber 15, 1907, to stockholders of General Electric Co. of record at the close of business hours on Saturday, [illegible]ember 14, 1907. The transfer books will not be closed.

By order of the Board of Directors,

M. F. WESTOVER,
Secretary.

SPECIAL NOTICES

"A little leak will sink a ship."

It is the little things that count. Bradstreet's list of failures show it is not the colossal breaks, but the little leaks that sink the ship.

The matter of ink may seem trivial, but if you are not getting the best possible results you have a leak.

PLUG IT. SAVE THE SHIP.

Use Carter's Ink.

INSURANCE

1850—1906.

The United States Life Insurance Co.

IN THE CITY OF NEW YORK.

JOHN P. MUNN, M. D., - PRESIDENT.

BRADSTREET'S

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY.

Henry E. Dunn, President; Charles L. Beckwith, Secretary; Charles M. Clark, Treasurer.

NOS. 346 AND 348 BROADWAY, NEW YORK.

Berlin, 23 Charlotten-Strasse.
London, 137 Cheapside, E. C.
Melbourne, 231 Flinders Lane.
Paris, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 14, 1907.

A new record from coast to coast across the Atlantic was made by the great turbine steamship Lusitania, which, leaving Queenstown at 12.11 P. M. on Sunday, arrived off the Sandy Hook Lightship at 8.05 o'clock on Friday morning. The trip across of 2,780 miles was made in five days and fifty-four minutes, official time. This achievement of the new ocean racer lowers the record from Queenstown to New York by over a quarter of a day, the best previous time being five days, seven hours and twenty-three minutes, made by the Lucania in October, 1894. The run made by the Lusitania has been looked forward to with much interest, owing to the expectation that it would result in a notable lowering of the record for the passage. It is possible that an even quicker run would have been made but for the fact that the vessel at times encountered fog. It may be remarked that while the Lusitania now holds the record for the passage, it has not equaled the record for the best day's run, which is held by the Deutschland, namely, 601 miles, nor the best average speed across the Atlantic, which was made by the Kaiser Wilhelm II in 1904, namely, 23.58 knots per hour. The Lusitania's best day's run was one of 593 miles on the fourth day, and her hourly average speed was 23.01 knots.

Several circumstances contributed to create a temporary hardening of loan market rates at New York during the present week. It was merely a coincidence, however, that the bids for the New York City 4½ per cent. bond issue were opened on last Tuesday, the 10th instant, and that on the same day the Union Pacific convertible bond underwriters were called on to take up their proportionate amounts of the issue in question, of which only a small part had been disposed of to the public. This operation called for fully $37,000,000 in cash, while the certification of checks to the amount of 2 per cent. on the subscriptions to the New York City bonds, which were $200,000,000 or more, as well as the preparations to take up allotments of the same, also had an effect. Another financial happening of the same date was the maturing of the call for payment at par and interest of the two series of Japanese government 6 per cent. bonds, of which some $23,000,000 were held in the United States, though it is believed that a considerable part of the same had been bought in the market by Japan's financial representatives in advance of the call. Of these influences, the most important in a general sense was the successful outcome of the New York City bond subscription, bringing as it did both foreign and interior participation, and the later weakness of the stock market seemed to be due almost entirely to considerations affecting the copper situation, having no relation, it would appear, to the monetary position.

After prolonged discussi the negotiations relative to the fisheries modus vivendi were definitely concluded at the end of last week. Ambassador Reid's note reciting the terms agreed upon was dated September 4, and Sir Edward Grey's reply, while dated on Friday, was only delivered to Mr. Reid on Saturday night. Under the terms of the agreement the fisheries are to be carried on substantially as they were actually prosecuted for most of the time by mutual agreement under the modus vivendi of 1906. It is agreed that the British government will not bring into force the Newfoundland foreign fishing vessels act of 1906, which imposes on United States fishing vessels certain restrictions in addition to those imposed by the act of 1906, and also that the provisions of the first part of section 3 of the act of 1906 as to boarding vessels and bringing them into port, and also the whole of section 3 of the same act, will not be regarded as applying to United States fishing vessels. In consideration of the fact that the shipment of Newfoundlanders by United States fishermen outside the three-mile limit is not to be made the basis of interference or to be penalized, the United States government waives the use of purse seines by United States fishermen during the term covered by the agreement, and also waives the right to fish on Sundays.

In order to avoid questions of reasonable doubt, it is understood that United States fishing vessels will make their shipment of Newfoundlanders as fishermen at a sufficient distance from the three-mile limit to obviate such contentions. It is further understood that United States fishermen will pay light dues when not deprived of their rights to fish, and will comply with the provisions of the colonial customs law as to reporting at a custom house when it is physically possible to do so. As has been indicated heretofore, the formal conclusion of the negotiations regarding the modus vivendi was deferred pending the consideration of certain proposals of Sir Robert Bond, the Newfoundland Premier, whose lately published utterances seem to disclose much discontent with the result. In any event a working basis for the conduct of the present season's fishing has been arrived at.

So far as can be learned, the conference at Washington looking to the establishment of a lasting peace in Central America has begun its task under most favorable auspices. The conference, which was called on the suggestion of Presidents Roosevelt and Diaz, held its preliminary meeting on Wednesday. Representatives of the five Central American republics were present, as were also Assistant Secretary of State Adee, on behalf of the United States, and Señor Godoy, representing the republic of Mexico. Little is known of the matters gone over in the conference, but Mr. Adee is quoted as reporting that the utmost good feeling prevailed. He, as well as Señor Godoy, addressed the Central American representatives, pointing out the importance of the gathering and the advantages to be derived from a lasting peace between the Central American republics. While no definite conclusions were reached on the questions presented for consideration, they were, it is understood, gone into with great care and with an apparent desire to reach a complete understanding. One circumstance that may occasion delay in reaching a final result is the lack of authority on the part of two of the representatives to sign any treaty without submitting it to their governments for approval. This, however, would only involve a short delay if the desire to reach an agreement is strong.

Last week's reduction in the price asked by large producers for copper metal, to 18 cents, apparently failed to stimulate buying. Accordingly, there has been a further decline in the New York Metal Exchange price to 15½ cents for electrolytic, with additional weakness in the London market, accompanied by talk of 12-cent copper. The indications of a continued decline are certainly distinct, though interest as concerns the copper situation has been subordinate to the reports that the Amalgamated Copper Company contemplates closing down its principal mines in the Butte district, or at least greatly curtailing its operations and output. There are various factors which would furnish a basis for such action. The accumulation of stocks of copper in the hands of the large producers and selling agencies has reached a point which creates financial difficulties in carrying the metal. In addition to this, it is claimed that there is a question whether the miners in the Amalgamated properties would consent to the reduction in their wages, which was provided for in their agreement with the companies, whereby they were to receive smaller compensation if the price of copper fell to below 18 cents. This, coupled with the fact that there is a a reported shortage of fuel, would seem to furnish reason for a suspension of operations, either total or partial. As a consequence of the above the copper stocks have been storm centers in the stock market, the price of Amalgamated breaking steadily to 58, making its market value less than one-half what it was last January, when the shares were quoted at 121. The directors of the Calumet & Hecla and of the Wolverine have reduced their dividends, these actions following a cutting of the dividend rate by the Quincy Copper Company. The whole course of the market from the latter part of 1906 and until the spring of this year readily suggests the inference that the leading copper producers were unwise in permitting prices to go as high as they did. In this connection it may be well to point out that electrolytic copper, which is the grade most actively traded in, went as high as 25.75 cents per pound in the early spring, while 15.75 cents and even lower has been named within the week.

Rules requiring notice of the opening of hostilities were adopted at the fifth plenary session of the Peace Conference at The Hague held on Saturday last, a few countries, however, making reserves. It is provided under these rules that hostilities must not begin without previous unequivocal notice having been given, either in the form of a declaration of war setting forth its motives, or in the form of an ultimatum with a conditional declaration of war. Furthermore, a state of war must be notified without delay to the neutral powers, the effect for the latter beginning after they receive notice, which can be given even by wire. In any case the neutral powers cannot protest against the lack of this notice if it is established that they undoubtedly knew that a state of war existed. The conference also approved, also with some reservations, a number of regulations concerning the rights and duties of neutral states in time of war, but when the regulations regarding the treatment of neutrals on belligerent territory were brought up, objection was made on the part of Germany, and they were referred back to the committee on land war, which after a long discussion withdrew them.

THE NEW YORK CITY BONDS.

Not only was the subscription for the $40,000,000 of New York City 4½ per cent. bonds a financial success, but it proved popular as well. When the bids were opened on last Thursday afternoon they aggregated the unprecedented number of 960, the previous record in that respect having been 197 for the $37,000,000 of 3½ per cents sold by the city in May, 1904. The total amount of applications was in the neighborhood of $205,000,000, so that the loan was oversubscribed five times, which included a tender for the entire $40,000,000 made by a syndicate composed of J. P. Morgan & Co., the National City Bank, the First National Bank of New York, and Harvey Fisk & Sons. There was another bid made for the whole amount, which was disregarded by the city comptroller as unsubstantial. The widespread interest which the transaction excited is shown not only by the number and magnitude of the bids, but by the fact that a large proportion of them came from all over the country, while European interests were also represented, it is understood, in the applications made by a number of international banking houses. Moreover, when the awards were announced it was found that no less than 376 bidders had been successful, and obtained amounts of from $50 up to $5,000,000, which was the largest single award, it being noted that the Morgan syndicate secured only $3,508,200 on their offer to purchase the entire issue. While some of the smaller bidders paid from 104 to 110, the average price named in the successful bids for the $35,000,000 of fifty-year stock was 102.063, and for the $5,000,000 of the issue due in 1917, 100.30, at which figures the income yields would be 4.39 per cent. and 4.46 per cent. respectively.

In view of the above gratifying results of this much discussed operation, there is little disposition, in financial quarters at least, to cavil at the comparatively small premium which a municipality of such high credit obtained for an issue bearing the exceptionally high rate of 4½ per cent. It is, however, interesting to compare the outcome of the city's previous bond issues with the one just put forth, the different sales since 1900, inclusive, being given in the following tabulated form:

1907	*Amount*	*Interest rate*	*Average price*	*P. ct. on investment*
August 12	$15,000,000	4	100	3.998
June 28	29,000,000	4	100.094	3.994
February 1	30,000,000	4	100.39	3.98
1906				
December 14	8,000,000	4	101.42	3.93
December 14	3[illegible]000	4	100.68	3.95
December 14	1,500,000	4	100.11	3.98
November 2	4,500,000	4	101.89	3.925
July 25	11,029,100	4	100.97	3.94
February 15	20,000,000	4	108.052	3.65
1905				
April 24	22,000,000	4	100.712	3.499
April 24	3,000,000	4	100.081	3.497
November 23	12,500,000	3½	100.017	3.475
1904				
January 20	10,000,000	3½	100.23	3.49
March 24	3,000,000	3½	100.10	3.495
May 3	37,000,000	3½	100.13@100.94	3.468
November	25,000,000	3½	102.41	3.40
1903				
January 22	7,500,000	3½	104.56	3.31
March 5	2,500,000	3½	104.29	3.32
April 9	2,500,000	3½	103.28	3.36
May 12	3,000,000	3½	104.33	3.32
July 22	3,500,000	3½	102	3.41
November 19	7,500,000	3½	101.05	3.450
1902				
February 18	3,000,000	3½	107.51	3.19
May 6	4,993,000	3½	106.37	3.23
June 26	4,667,000	3½	105	3.28
November 11	7,550,000	3½	106.23	3.24
1901				
January 30	3,125,000	3	101.46	2.93
March 25	2,500,000	3½	110.51	3.08
May 14	5,885,000	3½	104.27	3.29
June 17	3,057,000	3½	106.57	3.21
September 16	3,000,000	3½	103.15	3.36
October 29	3,600,000	3½	107.27	3.17
December 12	7,841,000	3½	106.29	3.22
1900				
November 20	5,333,965	3½	110.713	3.024
December 26	3,555,000	3½	112.117	2.982

Considerations connected with the present state of the money and investment market fully justify the course adopted by the city's financial authorities, who are, in fact, to be commended for the amount of courage they displayed in offering such a large amount at such a time, and in making the rate of interest high enough to be attractive. In fact, the operation demonstrates the important fact that the much talked of hesitation on the part of investors and the lack of capital are to a large extent mythical. In other words, municipalities, and it may be presumed corporations, possessing satisfactory credit, it is now shown, can obtain money if they will pay a sufficiently high rate. It is not surprising, therefore, to hear it intimated that New York's course may find imitators abroad, where a similar deadlock has existed, and the possibility of the city of London issuing a loan at a higher rate than it has heretofore paid on its bonds has been discussed. To the financial world the success of the New York bond sale has been exceedingly cheering. This is reflected by the more confident tone of the securities market at large, the general feeling in such quarters being that the event may go far toward creating a revived interest in the bond market generally.

THE PENNSYLVANIA RATE DECISION.

It may be recalled that the validity of the Dunsmore 2-cent rate law enacted by the legislature of Pennsylvania at its last session was questioned in a suit in which the Pennsylvania Railroad Company sought to enjoin the county of Philadelphia from collecting fines provided for violations of the act. The case has been under consideration in the Court of Common Pleas in Philadelphia for a time long enough to insure a mature examination of the points involved, and that court has this week rendered a decision to the effect that as regards the Pennsylvania Railroad Company the law cannot be enforced for the reason that the rates fixed by it are unreasonable and confiscatory. The court which has rendered the decision is, of course, not one of last resort, but the questions involved are of such importance, and they have been considered so carefully with the aid of a bar never lacking in distinguished legal ability, that the decision calls for more than passing mention.

Putting on one side questions of economic policy as proper for the consideration of the legislature alone, the court recognizes the general principle that from the strictly legal point of view the right to regulate the charges of those engaged in business affected by a public interest is vested in the legislative branch of the government and its deputed agencies, subject, however, to the limitation that every regulation must be reasonable. Any attempt by the legislature to regulate charges is presumptively reasonable, and the burden of demonstrating its unreasonableness lies on whoever objects to the regulation enacted. So the establishment by the legislature of a maximum rate of charges to be made by quasi public corporations subject to its control is not unreasonable per se. If in its application to a particular corporation such a regulation should prove unreasonable, its operation as to such corporation will be restrained, while it will be enforced as to all other corporations to which it is applicable and to which it is fair.

In determining whether a particular legislative regulation of the charges of a public-service corporation is reasonable, the court continues, it is to be borne in mind that such a corporation is entitled to a fair return upon the value of the property employed by it for the public convenience, while, on the other hand, no more is to be exacted from the public for its services than they are reasonably worth. In Pennsylvania, the court holds, public-service corporations are entitled to look for a rate of return, if their property will earn it, not less than the legal rate of interest, and a system of charges that yields no more income than is fairly requisite to maintain the plant, pay fixed charges and operating expenses, provide a suitable sinking fund for the payment of debts, and pay a fair profit to the owners of the property, cannot be said to be unreasonable.

One of the familiar limitations upon the power of the state legislatures is the provision contained in section 10 of article 1 of the Constitution of the United States, to the effect that no state shall pass any law impairing the obligation of contracts. This limitation was invoked in regard to the lines constructed by the plaintiff company between Harrisburg and Pittsburgh and between Pittsburgh and Erie, for the construction of which the Pennsylvania Railroad Company was incorporated by the act of April 13, 1846. That act provided that the company might from time to time establish, demand and receive such rates of toll or other compensation for the use of said road as to the president and directors should seem reasonable, provided, among other things, that in the transportation of passengers no charge should be made to exceed 3 cents per mile for through passengers and 3½ cents per mile for way passengers. The court holds that by this act the Pennsylvania Railroad Company received from the commonwealth the right of immunity from rate regulation within the limits set out in the act as to the lines constructed under the authority thereof.

In determining whether, as to the other lines of the company, the maximum fare provided by the Dunsmore act was reasonable, the court goes into an examination of the company's intrastate passenger earnings and the cost of carrying on that branch of its business, making use of a rule of apportionment generally employed for that purpose to approximate the amount of the company's investment in that part of its traffic. From the calculations thus made the court arrives at the conclusion that the company's probable earnings from its intrastate passenger business less the year's probable taxes would yield a return of 5.1 per cent. on the basis of the rates charged at present. From another calculation the conclusion is arrived at that, assuming that no change should be made in the price of commutation tickets and that other fares in excess of 2 cents per mile should be reduced to that rate, the profits of the company upon its intrastate passenger business after the payment of interest charges would be reduced to a return of but 1.94 per cent. upon the company's investment.

Upon the basis of these findings, the court holds, the schedule of rates under which the company now conducts its intrastate passenger business is not unreasonable, since the return produced does not yield the legal interest on the investment to which the investor in a public-service business is entitled. In the next place, the court holds that since the reduction to the rate of 2 cents per mile, fixed by the act in question, of all fares now established on a higher basis would probably have the effect of reducing the profits of the company from its intrastate passenger business to a sum equivalent to less than 2 per cent. on its investment in the facilities necessary for carrying that business on, and since a return so small is not fair remuneration for the use and risk of its property, the regulation attempted by the legislature in the act must, so far as it relates to the plaintiff and for so long as the present conditions continue, be adjudged unreasonable. This last statement measures the extent of the decision. Under it the law cannot be enforced against the Pennsylvania Railroad Company; apparently the other railroads affected will be obliged to establish the unreasonableness of the law as far as they are concerned. Meanwhile an appeal will be promptly taken to the Supreme Court of the state, and in the event of the reversal of the decision there, the question will be brought for review before the Supreme Court of the United States.

STAPLE COMMODITIES AGAIN MOVE LOWER.

Weather and crop conditions, influencing the prices of nearly all farm products in an upward direction, offered almost the only real check to the general downward tendency that manifested itself in August in many commodities, and especially in metals, which showed the greatest weakness of any class of manufactured products. Breadstuffs felt the influence of less satisfactory crop reports as well as of improved export inquiry, dairy products reflected the influences of dry weather upon milk production throughout the entire eastern part of the country, and cotton, hay, tobacco and other agricultural produce also moved higher. On the downward side iron and steel, copper, tin and lead all weakened, as did hides, most raw textiles (except cotton and silk), live animals and meats, sugar and coffee among groceries, naval stores and some building materials. As to the decreases, the main cause undoubtedly lies in the less active demand noted in a number of lines as respects new business.

BRADSTREET'S approximate index number on September 1, 1907, was $8.8297, a decrease of 1.1 per cent. from August 1, of 2.3 per cent. from July 1, and of 3.2 per cent. from the high point of the present movement, reached on March 1, 1907. Compared with September 1 a year ago, the increase in the general price level is 4.4 per cent., and the gain over the same date in 1905 is 6.6 per cent. It is worth noting, however, that there were high points in earlier years which make the present high level of quotations less notable than might otherwise appear. Thus the gain over February 1, 1900, is only 7.2 per cent., while the increase over the high point in 1892 is 8.4 per cent. Compared with the low level set on July 1, 1896, the gain is 54.8 per cent. Fluctuations in the price level in the past fifteen years

are shown in the following table, which gives the respective swings from high to low and the reverse thereof, as noted by BRADSTREET'S approximate index number:

Jan. 1, 1892	$8.1382	Jan. 1, 1906	$8.3289
July 1, 1896	5.7019	Feb. 1, 1906	8.2415
Jan. 1, 1897	6.1164	Mar. 1, 1906	8.2321
July 1, 1897	5.8537	April 1, 1906	8.2987
Feb. 1, 1900	8.2307	May 1, 1906	8 3054
June 1, 1901	7.4181	June 1, 1906	8.3203
Dec. 1, 1902	8.1413	July 1, 1906	8.2835
Aug. 1, 1903	7.7473	Aug. 1, 1906	8.3376
Feb. 1, 1904	8.0973	Sept. 1, 1906	8.4528
July 1, 1904	7.6318	Oct. 1, 1906	8.5580
Jan. 1, 1905	8.0827	Nov 1, 1906	8.7509
Feb. 1, 1905	8.0805	Dec. 1, 1906	8.9023
Mar. 1, 1905	8.0976	Jan. 1, 1907	8.9172
April 1, 1905	7.9996	Feb. 1, 1907	8.9953
May 1, 1905	7.9700	Mar. 1, 1907	9.1293
June 1, 1905	7.9073	April 1, 1907	8.9640
July 1, 1905	7.9160	May 1, 1907	8 9356
Aug. 1, 1905	8.1111	June 1, 1907	8.9901
Sept. 1, 1905	8.2795	July 1, 1907	9.0409
Oct. 1, 1905	8.2298	Aug. 1, 1907	8.9304
Nov. 1, 1905	8.2097	Sept. 1, 1907	8.8297
Dec. 1, 1905	8.3014		

The net result of the various movements during the month of August is illustrated by the following table giving the index numbers (totals of prices per pound) at different dates by groups of commodities:

	July 1, 1896	*Sept.* 1, 1906	*Mar.* 1, 1907	*Aug.* 1, 1907	*Sept.* 1, 1907
Breadstuffs	$0.0524	$0.0733	$0.0817	$0.0937	$0.0992
Live stock	.1855	.3125	.3315	.3290	.3255
Provisions	1.3619	1.9297	2.1049	1.9197	1.9515
Fruits	.1210	.1994	.2003	.1995	.1957
Hides and leather.	.8250	1.1900	1.1975	1.1850	1.1750
Textiles	1.5799	2.4995	2.7369	2.8312	2.8029
Metals	.3757	.7534	.8466	.7773	.7122
Coal and coke	.0048	.0069	.0080	.0069	.0070
Oils	.2082	.2995	.3428	.3650	.3663
Naval stores	.0402	.0994	.1170	.0948	.0912
Building materials	.0716	.0894	.0906	.0852	.0851
Chem. and drugs	.6607	.7083	.7083	.7141	.7021
Miscellaneous	.2150	.2915	.3632	.3290	.3160
Total	5.7019	8.4528	9.1293	8.9304	8.8297

We find from this table that only four groups of products—provisions, breadstuffs, oils and coal and coke—showed gains in August, the last two being very slight, while nine groups declined. As to individual commodities, it is found that twenty-four articles advanced, while thirty-two declined and forty-nine remained unchanged, as shown in the following table:

SEPTEMBER 1, 1907, COMPARED WITH AUGUST 1, 1907.

INCREASES.		
Wheat	Beef	Cotton
Corn	Butter	Silk
Oats	Cheese	Anthracite coal

Here we find fifty-seven articles are higher, while twenty-six are lower and twenty-two are unchanged.

ONLY FAIR CROPS INDICATED.

The week has been prolific in reports as to crop progress and condition, the Agricultural Department at Washington issuing its reports on cotton and the cereals on September 9 and 10, the Census Bureau reporting the cotton ginning up to September 1, and various states contributing reports of corn and other late crop conditions and the yields of wheat earlier in the year. Taken as a whole, the reports are as previously foreshadowed, pointing to reductions in nearly all crops from last year and indicating fair yields only of staple agricultural products. The favorable side to this from the farmers' standpoint is, of course, the higher range of prices to be secured by agricultural communities which have made fair or good crops. Not so much, perhaps, can be said from the standpoint of the consumer, who faces a period of high prices for food and some other staples during the coming autumn and winter.

The crop reporting board of the Bureau of Statistics of the Department of Agriculture finds, from the reports of the correspondents and agents of the bureau, that the average condition of cotton on August 25 was 72.7, as compared with 75 on July 25, 1907, 77.3 on August 25, 1906, 72.1 on August 25, 1905, and a ten-year average of 74.5. The following table shows the condition on August 25 of this year and of the two preceding years, with the respective ten-year averages; also the condition on July 25, 1907:

	Aug. 25, 1907	*July* 25, 1907	*Aug.* 25, 1906	*Aug.* 25, 1905	10-*yr* *av'ge*
Virginia	77	65	71	76	82
North Carolina	78	75	71	76	79
South Carolina	83	81	71	75	76
Georgia	81	81	72	77	76
Florida	80	84	70	77	78
Alabama	73	72	76	70	74
Mississippi	72	71	82	69	78
Louisiana	69	71	76	62	76
Texas	67	75	78	70	69
Arkansas	65	68	84	72	75
Tennessee	78	75	88	81	82
Missouri	75	66	94	86	82
Oklahoma	72	74	88	82	81
Indian Territory	70	74	80	80	79
United States	72.7	75 0	77.3	72.1	74.5

The area planted in cotton this year and the condition on August 25 compare with the area, yield and condition in six preceding years as follows:

	Area	*Yield*	*Condition Aug.* 25
1907	32,060,000	....	72.7
1906	32,049,000	13,512,000	77.3
1905	26,999,642	11,346,000	72.1
1904	31,730,000	13,565,000	84.1
1903	28,907,000	10,011,000	81.2
1902	27,878,000	10,727,000	64 0
1901	27,534,000	10,680,000	71.4

The similarity of the conditions of the crop to that of 1905, on August 25, at once strikes the eye. In that year, with 5,000,000 fewer acres, the commercial crop was 11,346,000 bales (some of this probably being cotton left over from 1904), but on the face of the returns there was a yield of .42 of a bale per acre, which applied to this year's area would point to a crop of over 13,440,000 bales. In just so much as the crop of cotton actually grown that year was less than that appearing in the "commercial crop" statistics, this approximation would have to be reduced. The census reports the actual ginning of that season's growth at 10,575,000 bales, which would reduce the possible crop this year, based on 1905 output, to 12,480,000 bales. Owing to the lateness of the crop this year the ultimate outcome is still more than usually doubtful, and the estimate of 12,500,000 bales is, all things considered, a high maximum.

Regarding this matter of lateness, it might be noted that the amount of cotton ginned on September 1, according to the Census Bureau, was 191,416 bales, counting round bales as half bales, against 407,551 last year, 476,655 two years ago, and 374,821 in 1904. The number of active ginneries this year on September 1 was 4,067, against 6,628 last year, 8,629 two years ago, and 7,567 in 1904.

As regards the other leading crops, the following condition figures, reported for September, will be found of interest:

	Sept. 1, 1907	*Aug.* 1, 1907	*Sept.* 1, 1906	*Sept.* 1, 1905	10-*yr.* *av'ge*
Corn	80.2	82.8	90.2	89.5	81.0
Spring wheat	77.1	79.4	83.4	87.3	....
Oats	65.5	75.6	81.9	90.3	82.6
Barley	78 5	84.5	89.4	87.8	84.3
Buckwheat	77.4	91.9	91.2	91.8	88.2
Potatoes	80.2	88.5	85.3	80.9	79.4
Tobacco	82.5	82.8	86.2	85.1	*82.8

* Five-year average.

Declines in all crops during August are indicated, the losses being especially severe in oats. All of the seven crops above reported are below 1906 and 1905 at this date, and below the ten-year average. Reduced to a quantitative form, the probable results (in bushels) of the condition figures of the leading crops point to about the following:

	Possible yields 1907	*Actual yields* 1906	*Record yields and years*	
Winter wheat	409,500,000	492,888,000	492,888,000	1906
Spring wheat	222,264,000	242,372,966	293,185,322	1899
Total wheat	631,764,000	735,260,966	748,460,218	1901
Corn	2,540,000,000	2,927,416,091	2,927,416,091	1906
Oats	787,275,000	964,904,522	987,842,704	1902
Barley	151,979,000	178,916,484	178,916,484	1906
Buckwheat	12,993,000	14,641,937	22,791,839	1866
Total above cereals	4,124,011,000	4,821,140,000	....	..
Potatoes	287,400,000	308,038,382	332,830,300	1904

There is here indicated a loss in the aggregate cereal yields of 14.4 per cent. from last year, wheat, corn and oats showing decreases of respectively 14.1, 13.2 and 18.3 per cent. from 1906. A loss in the yield of potatoes of about 7 per cent. is likewise indicated.

BUILDING IN AUGUST.

Reports from sixty-seven American cities to BRADSTREET'S for the month of August show a total expenditure for building in those cities during that month of $46,925,419, as against $49,756,230 expended in August a year ago, and $51,084,014 expended in July, 1907. There is here indicated a decrease of 5.6 per cent. from August a year ago, and of 8 per cent. from July, 1907. It will be seen that forty out of the sixty-seven cities show larger expenditures in August this year than last, but the decrease in all building is explained by the fact that most of the larger cities show smaller expenditures. Following will be found the detailed figures at sixty-seven American cities and five Canadian cities for August, with the percentages of gain or loss from August a year ago:

	August, 1907	*Compared with last yr.* *Inc.*	*Dec.*

* New work. † Alterations.

Five cities in Canada show an expenditure in August, 1907, of $2,460,276, a decrease of 27.9 per cent. from the same month a year ago.

WHEAT SUPPLIES ON SEPTEMBER 1.

Wheat supplies in the United States increased slightly more than is usual in August, while those in Canada fell off to a greater extent than ordinary, the net result being a gain in all American stocks slightly larger than was shown in August a year ago, and still larger than in the same month of the preceding three years. The revised European figures for September 1, however, showed only a slight gain over those held on August 1, and the gain was less than a fifth that shown in the same period a year ago. The result was a gain in the entire American and European supply less than half that shown in August a year ago, and only slightly larger than the gain shown in August, 1905. The result of these movements is still further to reduce the excesses in the supply shown this year, as compared with last, to about one-half that reported previous to the beginning of the present cereal year.

The statistics of stocks held in the United States and Canada, east and west of the Rocky mountains, on September 1, 1907, compare with the same period of the four preceding years as follows:

	East of Rockies	*Pacific coast*	*Total American visible*
September 1, 1907	64,871,000	1,557,000	66,430,000
September 1, 1906	43,611,000	1,943,000	45,554,000
September 1, 1905	21,705,000	1,130,000	22,835,000
September 1, 1904	19,405,000	1,582,000	20,987,000
September 1, 1903	21,824,000	1,798,000	23,522,000

Just how the stocks are divided between this country and Canada appears in the following table:

1907	*United States*	*Canada*	*Total*
January 1	59,188,000	24,049,000	83,237,000
February 1	56,103,000	25,058,000	81,461,000
March 1	53,082,000	27,292,000	80,374,000
April 1	53,112,000	30,385,000	83,497,000
May 1	54,450,000	26,941,000	81,391,000
June 1	53,633,000	19,536,000	73,169,000
July 1	49,131,000	16,419,000	65,550,000
August 1	51,549,000	12,114,000	63,663,000
September 1	57,674,000	8,756,000	66,430,000
1906			
January 1	57,672,000	19,473,000	77,145,000
February 1	58,182,000	20,266,000	78,446,000
March 1	54,051,000	21,377,000	75,428,000
April 1	49,082,000	21,482,000	70,564,000
May 1	42,878,000	12,303,000	55,181,000
June 1	34,996,000	8,700,000	43,696,000
July 1	28,936,000	6,181,000	35,117,000
August 1	30,518,000	3,591,000	43,109,000
September 1	42,989,000	2,565,000	45,554,000

The following figures compare the American and Canadian stocks of wheat on or about the first of each month since January 1, 1905, with those held in Europe on the same dates, as reported by BRADSTREET'S for the United States and Canada, by Broomhall for Europe and afloat therefor, and the grand total thereof on the same dates:

[Five figures omitted.]

	U. S. and Canada			*Europe*			*Grand total*		
	1907	1906	1905	1907	1906	1905	1907	1906	1905
Jan. 1	83,2	77,1	60,3	87,2	82,8	90,2	170,4	159,9	150,5
Feb. 1	81,5	78,4	57,6	75,0	75,6	86,7	156,5	154,0	144,3
March 1	80,4	75,4	51,9	83,0	88,1	86,7	163,4	163,5	138,6
April 1	83,5	70,6	46,4	83,6	90,7	89,8	167,1	161,3	136,2
May 1	81,4	55,2	38,5	86,8	87,7	86,2	168,2	142,9	124,7
June 1	73,1	43,7	29,0	82,5	82,7	82,4	155,6	126,4	111,3
July 1	65,5	35,1	19,0	71,3	74,7	80,2	136,8	109,8	99,2
August 1	63,7	43,1	20,9	62,3	62,7	72,1	126,0	105,8	93,0
Sept. 1	66,4	45,6	22,8	63,8	70,7	73,0	130,2	115,9	95,8
Oct. 1	....	64,6	38,6	....	83,2	80,2	....	147,8	118,8
Nov. 1	....	73,0	58,2	....	88,1	75,9	....	161,0	134,1
Dec. 1	....	78,7	68,3	....	89,7	83,8	....	168,4	152,1

The American and Canadian supply on September 1 was 66,430,000 bushels, which was 21,000,000 bushels larger than was held on September 1 a year ago, and about three times what was held on September 1, 1905. The European supply on September 1 was only 63,800,000 bushels, as against 70,700,000 bushels a year ago and 73,000,000 on September 1, 1905, while the combined American and European supply on September 1 was 130,200,000 bushels, a total only 14,300,000 bushels larger than on September 1, 1906, but 34,400,000 bushels larger than was held on September 1, 1905.

RAILWAY GROSS EARNINGS FOR AUGUST.

Railway gross earnings, while still on the up grade, tend to show somewhat smaller increases than in recently preceding months of this year. But this development is not at all surprising in view of the lateness of crops and the conservatism being exercised in some lines of trade. As it is, however, results are satisfactory, all things considered; the supply of cars is ample, the volume of tonnage going forward is of goodly proportions, and, finally, the outlook favors pretty heavy traffic as soon as the general crop movement gets fully under way. Prices for all farm products are high, and this fact will go a long way toward offsetting short yields of cereals. Anyway, a gain of 9.1 per cent. in the volume of gross earnings for August, as compared with the figures for the like month in 1906, indicates heavy traffic, for in August last year business was very active, traffic congestion ruled, and, indeed, earnings assumed immense proportions, the increase over the figures of August, 1905, being no less than 13.1 per cent. The fact that the railroads are now able to report an increase of 9.1 per cent. for August the current year indicates that last month's figures are the best recorded, for increases since August, 1896, when the last decrease was reported, are of a cumulative character. These remarks refer, of course, to gross receipts only. In order to find out what the net earnings will show on a gain of 9.1 per cent., in view of the heavy cost of operation, one will have to wait for the final returns, which will be published a month hence.

Preliminary reports thus far received show that gross earnings in August aggregated $84,654,266, the actual increase over the same month in 1906 being $7,099,370, or 9.1 per cent., the smallest gain reported for any month since last March. This table gives the returns in group form:

	1907	1906	*Inc., p. ct.*
Northwestern	$9,361,632	$8,414,054	11.2
Central-western	15,125,392	14,448,166	4.7
Trunk lines	20,901,943	19,317,233	8.2
Southern	13,382,954	12,431,890	7.6
Southwestern	10,150,057	9,165,824	10.7
Pacific	15,732,278	13,777,719	14.2
Total	84,654,266	77,554,896	9.1

Three groups report gains in excess of 10 per cent.—the Pacific 14.2 per cent., the northwestern 11.2 per cent. and the southwestern 10.7 per cent. The trunk lines furnish an increment of 8.2 per cent., while the southern group contributes an advance of 7.6 per cent., but the central-western lines show a gain of only 4.7 per cent.

A short statistical history of railway gross earnings is given in the following table, which shows the monthly trend of receipts back to 1901:

	1907 *Inc.*	1906 *Inc.*	1905 *Inc.*	1904 *Dec.*	1903 *Inc.*	1902 *Inc.*	1901 *Inc.*
January	2.4	19.4	6.1	3.8	10.1	7.6	8.1
February	2.0	25.6	†2.7	*.2	13.5	3.9	7.6
March	8.0	9.5	10.3	.05	14.5	6.7	7.4
April	16.0	11.7	8.7	4.5	14.3	11.2	8.9

*Increase. † Decrease.

A number of roads display losses as contrasted with the figures for August, 1906, but the decreases are not especially large, and the majority continue to report quite heavy gains, as the following list of increases in excess of $100,000 shows:

Northern Pacific	$868,959
Canadian Pacific	803,000
Great Northern system	775,294
New York Central	640,011
Missouri Pacific	528,000
Louisville & Nashville	393,085
Lake Shore & Michigan Southern	312,520
Southern	209,187
Michigan Central	208,780
Denver & Rio Grande	282,600
Pittsburgh & Lake Erie	261,992
Grand Trunk	257,308
Canada Northern	184,400
Illinois Central	168,944
Texas & Pacific	123,273
Cleveland, Cincinnati, Chicago & St. Louis	106,099
St. Louis Southwestern	103,611

Returns for practically identical roads for the first eight months of the current calendar year are given in the appended table:

	1907	1906	*Increase*	*P. ct.*
January	$69,909,545	$68,272,841	$1,636,704	2.4
February	61,847,147	60,613,077	1,234,070	2.0
March	76,623,443	70,915,286	5,708,157	8.0
April	79,282,674	68,316,988	10,965,686	16.0
May	82,728,103	71,898,426	10,829,677	15.1
June	82,056,350	72,355,927	9,700,423	13.4
July	89,109,900	79,969,880	9,131,020	11.4
August	84,654,266	77,554,896	7,099,390	9.1
Eight mos.	626,202,428	569,897,314	56,305,114	9.8

Thus the gain in gross earnings for the eight elapsed months of the calendar year amounts to $56,305,114, or 9.8 per cent., the total being $626,202,428.

THE ST. PAUL REPORT.

In nearly all the annual reports of railroad companies for the fiscal year ending June 30, 1907, which are now making their appearance, the same tendency is shown in respect to the relatively greater increase in their operating cost than in the gross earnings. This holds true of the Chicago, Milwaukee & St. Paul Railway's figures, which were published a few days ago, the different items showing the following changes from those of the preceding year.

Year ending June 30	1907	*Changes*
Gross earnings	$60,548,554	Inc. $5,125,501
Operating expenses	38,453,542	Inc. 5,964,029
Net earnings	22,095,012	Dec. 838,538
Other income	....	Dec. 258,359
Total income	22,095,012	Dec. 1,096,887
Taxes	2,285,097	Inc. 555,368
Balance	19,808,915	Dec. 1,652,255
Fixed charges	5,942,140	Inc. 28,290
Balance for stock	13,866,775	Dec. 1,680,545
Preferred dividend (7 per cent.)	3,484,453	Inc. 21,560
Balance	10,382,322	Dec. 1,702,105
Common dividend (7 per cent.)	5,813,306	Inc. 1,740,433
Surplus	4,569,016	Dec. 3,442,538
Improvements, etc.	946,868	Dec. 1,277,821
Surplus	3,622,148	Dec. 2,165,317

In the case of this representative grain-carrying line, the very satisfactory increase of $5,125,501, or 9 per cent., in gross is fairly eaten up by the accompanying expansion of $5,964,029, or 18 per cent., in operating cost, while it is also to be noted that the item of taxes is $555,368 greater than it was in the preceding year. As is the case with many other companies of the same class, not only are the St. Paul's gross earnings of a record-breaking magnitude, but the volume of its traffic was also the largest in the history of the system, the number of tons transported having been 28,596,041, against 26,201,941 the year before, while the tons carried one mile each reached the total of 5,155,662,000, as compared with 4,633,808,000 in 1905-06; and it is also to be noted that the average rate per ton per mile, which was .855 cent, shows only a slight decrease from .861 cent, the average rate of the preceding year. These favorable conditions as to the business of the system were, however, of no avail in the face of the above-mentioned greater cost of operating, and it should be mentioned that the increase in that respect was almost entirely in the two items maintenance of equipment and conducting transportation, each of which absorbed about $3,000,000 more than in the previous year, while maintenance of way was charged with $124,464 less than in 1905-06. In other words, the report shows an abnormal augmentation of expenditures, which, however, is something not peculiar to the St. Paul road. It is furthermore to be noted that the earnings available for dividends were $1,680,545 less than the year before, being equal to 14 per cent. on all the shares, both common and preferred. Owing to the increase of the outstanding common stock, the 7 per cent. dividends thereon called for $1,740,433 more, so that the final surplus of $4,569,016 represents a decrease of $3,442,538. Among other interesting facts, the report refers to the progress of the company's extension to Puget sound, and states that this undertaking will be completed in 1909.

NORFOLK & WESTERN'S YEAR.

The Norfolk & Western system being one of the typical bituminous coal carrying railways, its annual report is of considerable interest. The figures for the twelve months ending June 30 reflect the generally prosperous conditions in the industry which is the company's main dependence, although the coal shipments over its lines, which amounted to 9,400,432 tons, represent a decrease of 110,007 tons from the year before. This, however, was compensated for by the growth of other traffic, the total number of tons of freight transported—20,183,218—showing an increase of 916,684, while the number of tons carried one mile each, which was 5,252,561,000, meant an increase of over 240,000,000 ton-miles. In other words, the traffic of the system was the heaviest in its history, and was, moreover, accompanied by a slight increase in the average rate per ton, which was .495 cent per ton per mile, compared with .481 cent the year before. Conditions as regards the volume of business were, therefore, calculated to render the Norfolk & Western's year a banner one. The actual outcome as respects net results for the year is displayed in the following tabulated form:

Year ending June 30	1907	*Changes*
Gross earnings	$31,164,381	Inc. $2,676,615
Operating expenses	19,514,536	Inc. 2,449,912
Net earnings	11,649,845	Inc. 226,703
Other income	88,948	Dec. 76,397
Total income	11,738,793	Inc. 150,306
Charges and taxes	4,738,474	Inc. 602,362
Balance	7,000,319	Dec. 452,056
Pocahontas Coal, interest, adjustment, etc	939,011	Inc. 533,974
Balance	6,061,308	Dec. 986,030
Preferred dividend, 4 per cent	919,644	....
Balance	5,141,664	Dec. 986,030
Common dividend, 5 per cent.	3,223,460	Inc. 644,692
Balance	1,918,204	Dec. 1,630,722
Betterments and equipment	1,246,652	Dec. 1,703,348
Surplus	671,552	Dec. 72,626

The increase in gross earnings, equivalent to 9 per cent., was offset by the far greater proportionate rise in operating cost, which was over 14 per cent., thereby rendering the net gain merely fractional. In fact, this company, in common with all the leading railroad systems, found that the enhanced prices for material, fuel and labor practically offset the very favorable traffic conditions, while there was also an increase of $600,000 in charges and $533,000 in the amount required to make up the deficit on the obligations of the Pocahontas Coal Company and similar payments. Hence it results that the balance applicable to dividends was nearly $1,000,000 smaller. In the face of this, however, the management saw fit to increase the dividend rate on the common stock, putting that issue upon a 5 per cent. basis, instead of one of 4 per cent. The surplus available for improvements was therefore cut in half; the amount appropriated for betterments and new equipment during the year was cut down by $1,700,000, the total charged to that item being $1,246,000, against nearly $3,000,000 the year before, and comparing poorly with the large amounts which each successive annual report has shown heretofore as being devoted to such purposes by this company. In other words, the report tends to create the impression that the policy of increasing the common dividend last year was not fully justified by the actual results of the road's operations.

RECENT LEGAL DECISIONS.

[*Prepared for* BRADSTREET'S.]

Exclusive Agent—Injunction.

The Supreme Judicial Court of Massachusetts upheld, in the case of Beekman vs. Marsters, the right of an exclusive agent for New England of a Jamestown Exposition hotel to an injunction against a competitor who had induced the hotel corporation to allow him also to act as its agent in New England.

Carrier—Detention of Goods—Damages.

The Supreme Court of Iowa held, in the case of J. H. Cownie Glove Company vs. Merchants' Dispatch Transportation Company, that failure to procure a clearance of goods which a carrier undertook to transport in bond and clear at the port of arrival made it liable for injury to the goods because of their detention.

Agent—Exchange—Specific Performance.

The Supreme Court of Iowa held, in the case of Doolittle vs. Murray et al., that where a person acted as the agent of another whose identity was disclosed, in negotiating an exchange of a stock of goods for land which the principal repudiated, the agent could not be proceeded against as a principal and compelled specifically to perform the contract as if it were made by him in his own right.

Insurance—"Sun Stroke"—Furnace.

The Supreme Court of Kansas held, in the case of Continental Casualty Company vs. Johnson, that the words "sun stroke," when used in an insurance policy in describing one of the risks covered, are not limited to an effect produced by the heat of the sun unless the context or other special considerations require it, but include injury resulting from exposure to the heat of a furnace.

Deed—Restriction—Garage.

The Supreme Judicial Court of Massachusetts held, in the case of Evans vs. Ross, that a proposed garage designed to accommodate about 125 automobiles of large type, to be used in part for a repair shop and supplied with a large portable forge, and in which demonstrators to run them, was a building "offensive to the neighborhood for dwelling houses" within such a restriction contained in a deed.

Void Policy—No Insurable Interest.

The Kentucky Court of Appeals held, in the case of Howe's Ex'r vs. Griffin's Adm'r, that where a policy of insurance was fraudulently procured on the life of one for the benefit of another who had no insurable interest in the life of the insured, the policy was void as against public policy, and that where both parties participated in the fraud by which the policy was obtained, though the money had been paid to the beneficiary named in the policy, the personal representative of the insured could not maintain an action against such party for the proceeds.

Mortgage—Fraud—Consideration.

The Maryland Court of Appeals held, in the case of McCauley vs. Shockey et al., that where a creditor attacks the validity of a conveyance regular upon its face, it is incumbent upon him to show that it was not made upon a good consideration or that it was made with fraudulent intent upon the part of the grantor to hinder, delay or defraud his creditors, and that this intent was known to or participated in by the grantee, but that if it were established that a deed or mortgage was made by a grantor and accepted by the grantee with intent to defraud the creditors of the former, it would not change the situation because a full consideration was paid.

Contract—Unforeseen Conditions.

In the case of Linz vs. Schuck, recently decided by the Court of Appeals of Maryland, it appeared that after a contract to dig a cellar had been made the contractor found that the land was marshy and he was unable to do the work as originally planned. The owner promised to reimburse him for any additional cost if he would complete the work. Evidence was offered by the owner to show that the contractor's employees were negligent in excavating, and that the bad condition of the soil did not extend as deep as the contractor said it did; but it was also shown that the conditions were altogether different from what appeared upon the surface or what was anticipated at the time the contract was entered into. It was contended that the owner was liable for the additional costs and expenses incurred on his promise to pay, and that the general rule that "a promise to do that which a party is already under legal obligation to do is not a valid consideration to support the promise of the other party to the contract to pay additional compensation for such performance," did not apply to the facts in the case. The court held that the plaintiff was entitled to recover the additional cost and expense; that where the party refusing to complete his contract did so by reason of some unforeseen difficulties which were not known or anticipated by the parties when the contract was made, and which cast upon him an additional burden not contemplated by the parties, and the opposite party promised him extra compensation if he would complete his contract, the promise to pay was then supported by a valid consideration.

Statute of Limitations—Action—Insanity.

The Supreme Court of Minnesota held, in the case of Nebola vs. Minnesota Iron Company, that in determining whether a cause of action is barred by the statute of limitations, the day on which it accrued is exclusive, and that where a personal injury caused by the actionable negligence of another and resulting insanity occurred on the same day, the two events were legally simultaneous, for the reason that the law will not take notice of fractions of a day, and that the disability of insanity existed at the time the cause of action accrued, within the meaning of the statute of limitations.

Telegram—Failure to Deliver.

The United States Circuit Court for the Southern District of Georgia held, in the case of The Purdom Naval Stores Company vs. Western Union Telegraph Company, that where a telegraph company failed to deliver a message accepting a corporation's offer to sell its business for a specified price within a certain time, and the corporation thereupon refused, after the expiration of the time, to comply with such offer, the telegraph company was liable to the sender of the message for the difference between the price specified in the offer and the value of the corporation's business at the time an acceptance was attempted.

Telephone Charges—Extra Rates.

The Kentucky Court of Appeals held, in the case of Moberly vs. Richmond Telephone Company, that where a franchise granted by a city to operate a telephone therein provided that the grantee should not make charges exceeding the schedule rates fixed in the ordinance for service to the citizens of the city, and the grantee later extended its system into the county beyond the city limits, connected, however, with the city exchange, the telephone company had the right to charge its city patrons an additional rate for service outside of the city, the schedule of rates being silent as to service beyond the city limits.

Fire Insurance—Limiting Liability.

The Supreme Court of Michigan held, in the case of Attorney-General ex rel. Michigan Lubricator Company vs. Commissioner of Insurance, that a policy bearing a rider providing that in consideration of a reduced rate of premium the company would pay only such proportion of the loss as the sum insured in the policy bore to 80 per cent. of the value of the property insured, and that in no case would it be liable to a greater proportion of any loss than the amount insured bore to the whole of the insurance, was in violation of the act of 1895, which makes it unlawful for any fire-insurance company doing business in the state to limit its liability by reason of failure of the insured to insure the property covered by the policy for any certain proportion or amount of the actual cash value thereof.

Negotiable Instrument—Indorsement.

The Iowa Negotiable Instrument law provides, among other things, that where an instrument is drawn or indorsed to a person as cashier of a bank, it is deemed prima facie to be payable to the bank of which he is an officer, and may be negotiated by the indorsement of either the bank or the officer. In construing this provision of the law the Supreme Court of Iowa held (Johnson vs. Buffalo Center State Bank) that it was competent for the plaintiff, in an action on a certificate of deposit made payable to a third person as cashier of the defendant bank and indorsed by him as cashier, to show that such third person was the cashier of the defendant bank and was acting in that capacity in transferring the certificate sued on. The court further held that under the above statute, as against plaintiff, a bona fide holder of the certificate without notice, it was not competent for the defendant bank, in an action on the certificate, to show that the third person acting as cashier, as aforesaid, was making use of his official title and authority in his own individual interest, and hence that the bank was not bound by his act.

BUSINESS NOTES.

Cotton and Money in Egypt.

Egyptian cotton is now being picked, and by the end of this month marketing will be in full swing. According to the London *Statist*, the area under the crop is large, and if the usual fogs in the Delta, which occur in September, and which frequently cause worms, do not work serious damage, the crop will be an excellent one. If the crop is good there is every hope that those who suffered heavy losses in the recent crisis will be able to meet their obligations, and that business will rapidly revive. On the other hand, if the crop is much injured the consequences may be serious for Egypt. "Whether Egypt will require much gold this year, it is very difficult to form an opinion. Those in the best position to judge seem to think that the demand will be about the same as last year. On the one side, it is to be borne in mind that, owing to the recent crisis, the banks have all supplied themselves well with funds. There has, in fact, been a large export of gold to Egypt since the crisis—a period when money usually returns from Egypt. It is true that some gold has come back, but nothing like what has been sent out. For the moment, therefore, the banks are well supplied, and there seems no reason why there should be need for much more gold than in previous years. On the other hand, it is not to be forgotten that the Egyptian government is not flush in cash. In fact, it is quite the contrary, for, owing to the large expenditure upon its great public works, including irrigation, it has to spend very freely. If the Egyptian government should need further supplies it may have to draw heavily upon the banks, and the banks may have to import more gold than is now expected; but it is not to be lost sight of that the collection of the revenue always proceeds most satisfactorily when once the marketing of the cotton crop begins. Consequently, the government ought to have quite sufficient funds for the remainder of this year."

New Bedford's Whaling Industry.

"The arrival in New Bedford of the whaling brig Sullivan with 3,300 barrels of oil on board and the departure recently of three vessels in search of the whale do not signify, as has been intimated, a revival in the industry which made New Bedford famous as well as affluent in other days," says the New York *Sun*. "It is thirty years since the last whaling vessel sailed into Nantucket harbor with a cargo of oil and by-products aboard, but while the industry has languished in New Bedford it has always had some vitality. In 1906 there were thirty-six vessels, with a tonnage of 8,475, engaged in whaling with the name New Bedford painted above the stern post, and they brought home 16,000 barrels of sperm oil, 4,500 barrels of whale oil and 100,000 pounds of whalebone. For the sperm oil they got about 55 cents a gallon, for the whale oil 35 cents and for the now rare whalebone $5 a pound. Contrast these figures with those of the boom period in whaling sixty years ago. The New Bedford fleet then (1845) consisted of 736 vessels of all kinds, with a tonnage of 233,262. In that year 158,000 barrels of sperm oil, 272,000 barrels of whale oil and 3,000,000 pounds of whalebone were received, while prices were about 90 cents a gallon for sperm oil, 6 cents for whale oil, and for whalebone 40 cents a pound. It has been estimated that in the thirty-seven years between 1835 and 1872 the American whalers destroyed 292,714 whales, but it was not this enormous slaughter that caused so many ships to be laid up or abandoned in the ports of Stonington, Edgartown, Nantucket, Fairhaven, New London and Sag Harbor, as well as in flourishing New Bedford. It was the discovery of petroleum oil as an illuminant that made whaling unprofitable for so many owners. The industry began to decay when the Pennsylvania fields were opened. It was also affected adversely by the invention of substitutes for whalebone, but the abundant supply of a better and cheaper light than the sperm candle and whale oil was the main cause of disaster."

The Price of Copper.

The *Engineering and Mining Journal* points out that just two years ago the price of copper was about 15 cents, and every one thought that was good. Our contemporary says: "We have before us the prospectus of one of the best of the new enterprises that figured prominently at that time, in which one set of estimates was based on that figure, with another set based on 13 cents, and showing that a handsome profit would be realized at it—as, indeed, we believe would be the case. A few months later, when the price rose to 18 cents, there was jubilation and skepticism as to the long continuance of the good thing, because it was feared that consumption would be restricted. But even before the price receded to 18 cents, as it did last month, there were long faces and bewailment over the deplorable condition into which copper production had fallen. It was only about eighteen months ago that the great rise above 18 cents began. Conditions have not changed in the meanwhile, so that the producers who could make a great profit then can still do so now, or even at 15 cents. Doubtless it would have been better in the long run if the price had not gone above 18 cents. The market has simply returned to a more normal and more healthy position. The consumption of copper is not going to cease, even though the attitude and actions of the manufacturers for several months have lent some color to that belief. The trouble has been uncertainty and lack of confidence; but when knowledge as to the real statistical position is available—absence of which is one of the greatest unsettling factors—confidence will be restored and business will be resumed on normal lines. We believe that this will not be delayed much longer. When this consummation is reached it is to be hoped that the market will no longer have the skyrocket features that have characterized it during the last two years, It is to be hoped, moreover, that investors in copper shares will make up their minds to disregard the mischievous practice of various public advisers of computing earnings per share and percentage on going market price on the basis of temporary high quotations for the metal, which is a constant temptation to the unwary and inexperienced. The shares of good copper-mining companies are among the safest and most profitable forms of investment, but purchases should be made on the basis of the probable price for the metal over a series of years, and due allowance should be made for the gradual exhaustion of even the biggest mines."

Shipments of Anthracite Coal.

The output of anthracite coal in August exceeded all expectations. The tonnage, 5,716,252, has never been exceeded in that month, and represents an increase of 316,041 tons over August, 1906, which was also a record production. Every producing company showed an increase, except Ontario & Western. Jersey Central and Erie made the largest increases—102,670 and 170,981 tons respectively. Ontario & Western was 11,198 tons behind last August. The enormous output of the month was well taken care of, the stocks of coal at tidewater increasing but 92,224 tons. The shipments by the leading companies in August, with the percentage of each, was as follows:

	August, 1907	*Per cent.*	*August,* 1906	*Per cent*
Philadelphia & Reading..	1,173,245	20.53	1,187,971	22.00
Lehigh Valley	1,027,702	17.98	1,083,133	20.00
Central of New Jersey....	740,439	12.95	647,769	11.99
Delaware, Lack. & West..	921,444	16.12	875,383	16.21
Delaware & Hudson.....	566,094	9.90	487,075	9.02
Pennsylvania.....	438,574	7.67	430,209	7.96
Erie	612,540	10.72	441,559	8.18
Ontario & Western	236,214	4.13	247,412	4.58
Total.....	5,716,252	....	5,400,511	....

The output for eight months to August 31 shows the remarkable increase over 1906 of 8,435,522 tons. The tonnage last year, it must not be forgotten, was curtailed about 6,000,000 tons on account of the strike in April and May, but leaving this out of account, the output this year is remarkable, indicating not only a heavy consumptive demand for coal, but a larger colliery capacity than could have been expected after more than four years of extraordinary activity in the mines. Previous to this year the largest production in the first eight months of any year was that of 1903. The output this year is 1,771,233 tons ahead of that year. The shipments of anthracite by months for four years have been as follows, in tons:

	1907	1906	1905	1904
January.....	5,249,946	5,458,084	4,408,578	4,134,245
February.....	4,563,720	4,712,099	3,922,601	4,326,269
March	5,235,814	5,797,167	5,258,567	4,375,933
April.....	5,916,583	488,203	5,278,041	5,407,786
May	5,999,272	3,254,230	6,005,158	5,185,079
June	5,924,260	5,676,018	5,844,052	5,728,795
July	5,602,435	4,981,448	4,546,743	4,623,227
August.....	5,716,552	5,460,511	5,041,838	4,325,734
September	....	4,527,886	5,082,232	3,967,600
October.....	....	5,384,768	5,205,694	5,431,542
November	....	5,182,153	5,421,584	5,124,068
December.....	....	4,836,028	5,395,113	5,063,144
Total.....	44,203,582	55,698,595	61,410,201	57,392,522

The stocks of coal on hand at tidewater on August 31 were 737,254 tons, as compared with 645,030 tons on July 31, an increase of 92,224 tons. The stocks on hand on June 30 were 593,411 tons. Since that date 17,243,247 tons of coal have been produced, and stocks have increased 143,843 tons.

CURRENT BUSINESS NEWS.

Commercial.

The price of all grades of manila and wrapping paper has been advanced one-eighth of a cent per pound by the manufacturers. As compared with quotations the first of the year, heavy paper is 5/8@¾ cent higher at present.

The Kentucky state report gives the condition of corn September 1 as 91, against 89 in August, 1907, and 100 in September, 1906, when the crop was 105,000,000 bushels. The wheat-yield average per acre was ten bushels, against thirteen bushels a year ago, and the oats yield per acre eighteen bushels, against twenty-one last year.

The Northwestern Grain Dealers' Association estimates the wheat crop of the Canadian northwest at 82,000,000 bushels.

The Iowa state report makes the estimated yield of corn 288,000,000 bushels, against 388,000,000 last year. Oats estimated yield is 136,000,000 bushels, against 142,000,000. Spring-wheat estimated yield is 4,300,000 bushels, against 5,600,000.

The American Smelting & Refining Company has reduced the price of pig lead to 4¾ cents per pound. The reduction in the price of pig lead ½ cent per pound, to 4.75 cents, marks the second big reduction within the last two months. The last cut was announced on July 3—5.75 cents to 5.25 cents.

The *Iron Age* says: "Whereas before the establishment of American tinplate manufacture this country took much more of the Welch product than all other countries combined, the United States to-day receives less than one-seventh of the exports from Wales, though still the largest single customer. For the fiscal year ended June 30 our imports of tin and terne plates were 63,629 gross tons, as compared with 53,937 tons in the previous year. Meanwhile our production is at the rate of about 550,000 gross tons a year."

The following table shows for each of the five principal spring-wheat states the condition when harvested, as reported on September 1, in each of the last four years, and the condition on August 1, 1907:

	Sept. 1, 1907	*Aug.* 1, 1907	*Sept.* 1, 1906	*Sept.* 1, 1905	*Sept.* 1, 1904
Minnesota	77	80	79	84	69
North Dakota	71	72	84	89	63
South Dakota	79	83	88	89	56
Iowa	80	85	93	91	66
Washington	97	98	75	91	80
United States	77.1	79.4	83.4	87.3	66.2

The London *Economist* makes its index number of average prices of commodities September 1, 2519, compared with 2571 August 1, and 2341 September 1 last year.

Grain receipts at Minneapolis, in bushels, for fiscal year, September 1 to September 1:

	1906–07	1905–06
Wheat	92,643,730	97,532,750
Corn	5,297,930	2,757,570
Oats	20,374,750	27,860,950
Barley	11,692,010	14,274,020
Rye	1,911,730	1,689,380
Flax	10,162,240	12,231,670
Total	142,080,390	157,346,340

The Missouri state report shows no change in the corn condition there last month. It is spotted. Southwest section damaged by drought. Northern part above average, while other sections are average. Fair weather is needed. All corn will ripen unless there is killing frost this month. Condition last September was 86, but improved to 90 in October, and crop turned out 234,000,000 bushels. Government August report called the crop 228,000,000 bushels. Wheat yield per acre is placed at 14 bushels, against 13.6 last month and 15.5 a year ago, when crop was 36,000,000 bushels. Forty per cent. of the wheat land has been plowed. Slight decrease is expected in the wheat acreage. Most of the threshing is done. Oat yield 21 bushels, against 22 a year ago.

Foreign crop conditions as published Tuesday in Broomhall's Liverpool *Corn Trade News:* United Kingdom—The weather is favorable, but reports indicate that poor progress was made in harvesting during the past week. Supplies are very small. France—Latest reports confirm a good outlook for the crop. Markets are steadier. Germany—The harvesting of wheat has made slow progress, and supplies are extremely small. The demand for foreign grain continues good. The condition of rye continues unsatisfactory, and the anxiety regarding the failure of the potato crop is increasing. Hungary—Favorable rains have fallen, which are beneficial for the corn crop. The corn crop has, however, been damaged, but a fair yield is expected. Roumania—The corn crop this year will be a short one. Russia—There are continued disappointing threshing returns, but our own advices are less unfavorable than others. The weather for oats in the northern regions continues unfavorable, and the seeding of new oats is irregular. The outlook for corn is generally unfavorable. Italy—Our correspondent estimates that the wheat crop this year will amount to 32,000,000 bushels more than last year. The crop of 1906 was 161,600,000 bushels. Algeria—The crop outlook is disappointing.

The following table shows for each of the states having one million acres or upward in corn the condition on September 1 in each of the last three years, and that on August 1, 1907, with the ten-year September averages:

	Sept. 1, 1907	*Aug.* 1, 1907	*Sept.* 1, 1906	*Sept.* 1, 1905	10-*yr av'ge*

From all accounts the season's pack of Bartlett pears in New York state will be exceedingly short, not more than 20 to 25 per cent. of an average, according to some reports.

According to the Silk Association of America, the noticeable feature of the silk season, which ended June 30, was the high prices for raw silk. The supply of raw silk was in excess of any previous record, but the world's stock carried over to the new crop year was smaller than it has been for many years past. Last season the supply was 42,307,640 pounds, omitting tussahs, whereas the supply for this season is reckoned at 47,213,714 pounds, exclusive of tussahs. The selling for fall has been on a conservative but sound basis. The orders have been sufficiently heavy to warrant the production of staples along satisfactory lines by all manufacturing concerns. For spring, 1908, the feeling is very bright and extremely promising. All new introductions—and there are many of them—have met with instant favor, and there is a strong and confident feeling in every line of the business. Stocks of manufactured silks are not heavy for retail buying, as the manufacturing trade has been conducted on conservative lines for many months past. Stocks in the hands of the garment manufacturing trades have been moved at retail where garments remained unmade.

The following table shows for each of the thirteen principal oat states the condition when harvested, as reported on September 1, in each of the last three years, and that on August 1, 1907, with the ten-year averages:

	Sept. 1, 1907	*Aug.* 1, 1907	*Sept.* 1, 1906	*Sept.* 1, 1905	10-*yr av'ge*

United States	65.5	75.6	81.9	90.3	82.6

The Illinois September report makes the wheat acreage 1,442,160 acres, with yield 24,693,328 bushels, or seventeen bushels per acre. The government report last month pointed to 41,010,000 bushels for Illinois. Oats area is estimated at 3,008,313 acres, the smallest in fifteen years, with a yield of twenty-nine bushels per acre, making a total crop of 89,147,000 bushels. The government indications last month were for 109,590,000 bushels, and the total crop last year, government figures, 107,000,000 bushels.

The Michigan state report makes the corn condition 78, against 80 in August, and 94 in 1906, when the crop was 64,000,000 bushels. Condition of wheat is 94. Yield of oats twenty-one bushels, against twenty-nine last year, when the crop was 40,000,000 bushels.

The summarized statistical report of lake commerce through the "Soo" canals for August, 1907 and 1906, follows:

East-bound—	1907	1906
Copper, net tons	7,206	9,376
Grain, bushels	3,123,216	5,473,662
Building stone, net tons	220	832
Flour, barrels	850,935	877,540
Iron ore, net tons	6,120,880	5,228,559
Iron, pig, net tons	....	3,248
Lumber, M. ft. B. M	99,889	123,606
Wheat, bushels	7,312,829	4,369,589
General merchandise, net tons	24,730	28,865
Passengers, number	9,121	12,512
West-bound—		
Coal, hard, net tons	204,589	191,926
Coal, soft, net tons	1,448,467	1,163,914
Flour, barrels	....	8,850
Manufactured iron, net tons	47,427	31,696
Salt, barrels	81,867	68,878
General merchandise, net tons	134,828	126,922
Passengers, number	9,798	11,433
Summary—		
East-bound, net tons	6,697,307	5,818,146
West-bound, net tons	1,847,526	1,525,581
Total freight, net tons	8,544,833	7,343,727
Vessel passages, number	3,013	3,240
Registered tonnage, net	6,352,462	5,728,762

Broomhall cables that the Russian central statistical committee has issued preliminary estimates of the probable results of this season's crops in bushels, which estimates compare as follows with last year's final returns:

	Preliminary, 1907	*Final*, 1906
Wheat	470,400,000	504,800,000
Rye	760,800,000	632,400,000
Barley	288,320,000	298,400,000
Oats	929,000,000	699,000,000
Corn	47,944,000	67,440,000

The August statement of the British Board of Trade shows increases of £4,047,400 in Great Britain's imports and £3,862,400 in exports. The principal increase in the imports was raw materials. The main increase in the exports consisted of coal, £1,000,000, and manufactured goods, of which textile fabrics totaled £1,000,000.

The governments of the Netherlands and the United States have come to an understanding in the matter of a tariff agreement. This agreement will shortly be submitted to the Netherlands Parliament for ratification. It provides for the reduction in the American duties on brandy and other spirituous liquors imported from Holland, in return for which Holland agrees to impose lower duties on certain imported meats, but otherwise to maintain the existing tariff arrangements. With regard to tinned meats from America, the import duty thereon will be reduced by 25 cents per 100 kilograms. Holland further binds herself to in nowise differentiate unfavorably against American goods during the continuance of this agreement. The United States further consents to apply to Holland the new American regulations regarding the market value of goods having no sale in the country of origin.

In a report from Rio de Janeiro Consul-General G. E. Anderson states that the final official figures for the coffee crop of Brazil for the year ending June 30 show that the total entries in all Brazil reached 20,409,180 bags, representing an increase over the previous year of 9,353,802 bags, or 84.6 per cent., and an amount over the average for the past four years of 8,948,797 bags, and exceeding the previous banner crop of 1901-02 by 4,132,715 bags, or 25.4 per cent.

Financial.

The Transvaal mines last month produced 544,000 ounces fine gold. This is the estimate of London Kaffir houses, and if proved correct will be the second largest monthly output of the Rand. Last December production reached 550,167 ounces fine. Value of the August ouput, roughly, is $11,560,000. Comparison of the value of last month's output with previous months, and with August in other years, is as follows:

August, 1907	$11,560,000	August, 1906	$10,812,915
July, 1907	11,314,065	August, 1905	9,102,485
June, 1907	10,779,895	August, 1904	6,634,340
May, 1907	11,139,190	August, 1903	5,775,195
April, 1907	11,405,000	August, 1902	3,456,610
March, 1907	11,436,950	August, 1901	604,765
February, 1907	10,482,170	August, 1900	None
January, 1907	11,418,705	August, 1899	9,102,480

According to the *Journal of Commerce*, the output of new securities from January 1 to date has reached a total of $1,657,168,500, compared with $1,150,971,214 for the same period last year, an increase of $506,197,286. Short-term notes made a total of $280,511,000 of this amount, and new stocks represented a par of $681,259,500. Less than $1,000,000,000 of the amounts authorized has been actually disposed of.

Wm. A. Read & Co.
INVESTMENT SECURITIES
25 Nassau Street, New York
BOSTON CHICAGO BALTIMORE

The second of the larger copper companies to reduce its dividend because of the condition of the copper market is Calumet & Hecla, which has declared a quarterly dividend of $15 a share, against the four previous payments of $20. Calumet produces about 94,000,000 pounds per annum at 8¼ cents.

It is stated that Canadian companies will pay out $11,000,000 in dividends in October. The Canadian Pacific Railway will pay the largest sum.

The Utah Consolidated Mining Company, of New Jersey, has declared a dividend of $1 per share on its capital stock, payable October 15. The last quarterly dividend was $1.25 per share and 25 cents extra.

This table, taken from the *Journal of Commerce*, shows the principal note issues maturing within the current year:

	P. ct.	*Mature*	*Amount*
American Locomotive	5	Oct. 1	$1,000,000
National Railroad of Mexico	5	Oct. 1	8,500,000
Republic Iron & Steel Co.	5	October	944,000
Pennsylvania Co.	4½	Nov. 1	50,000,000
Kansas City Railway	5	Dec. 15	3,000,000
Total, 1907			63,444,000

The Wolverine Mining Company has reduced its dividend to $7.50 a share, as compared with the last previous dividend of $10 a share.

Justice Hendrick of the New York Supreme Court, Second Department, on Friday denied the application of the attorney-general for leave to begin an action against the Interborough-Metropolitan for the purpose of vacating its charter.

Railroads.

According to figures presented to the Institute of Electrical Engineers, the net saving over steam by the use of electricity on the railroads of the United States averages $638 per mile, which, if applied to the entire railroad system, would effect a saving of $138,500,000 per annum.

Industrial.

Statistics of production of pig iron, taken from the *Iron Age*, show that the output in August fell about 5,000 tons below July, the production of anthracite and coke iron in August having been 2,250,410 gross tons, as compared with 2,255,660 tons in July. The capacity of the furnaces active on September 1 was only 508,568 tons per week, as compared with 513,471 tons on August 1, and 528,170 tons, the record, on July 1. In spite of the blowing in of new furnaces, the production does not therefore develop.

It is stated that orders for the reduction of copper production have been issued by the Amalgamated Copper Company, North Butte Mining Company, Coalition Mining Company and Pittsburgh & Montana Company. There is no present intention to close the mines, but the reduction will amount to about 60 per cent. and will continue until the surplus copper is taken up. According to reports an effort will be made to avert a general shutdown, but unless there is an improvement in the metal market all mining will be suspended. All extensive construction work and unusual development work have been stopped, so it is said, and in general operating expenses will be cut down as much as possible.

Shipments of iron ore in August exceeded all previous monthly records, aggregating 6,806,811 tons, against 5,665,815 tons in August, 1906. For the season shipments total 24,341,552 tons, a gain of 1,620,457 tons over 1906. Fully 16,000,000 tons more must be taken down if a total of 40,000,000 tons is to be attained.

Miscellaneous.

The Belfast shipbuilding firm of Harland & Wolff admit officially that they are at work upon plans for a White Star Line steamer that is to be bigger than the Lusitania. The keel of this vessel is to be laid in a few months, and she will be fitted with reciprocating engines and turbines. According to reports, the new vessel is to be of 40,000 tons register.

STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Fall jobbing trade in dry goods and wearing apparel generally tends toward expansion as the ultimate outcome of leading crops becomes more assured, and as evidences increase of higher prices offsetting smaller yields. From the northwest reports are of orders previously held back now coming forward, and there is evidence also of more life in southern trade and of improvement in collections in that section as the cotton crop begins to move to market in good volume. Other favorable developments also are the increased shipments of grain and flour for export, confirming earlier and current advices that foreign takings of our cereals are increasing. Further evidence of this is also found in the weakening of foreign exchange and the reports that commercial bills against grain and cotton are appearing in larger volume. On the other hand, there are more irregular features presenting themselves in several leading industries, and the crop outlook as a whole is only fair when compared with recently preceding years. Weather too cool for corn this week makes it certain that the rather low condition figures shown in the government crop reports on September 1 will not be bettered materially, and only a late warm fall can mature other late crops on the full acreage. In the leading industries the notable feature is the sharp break in copper prices continuing the steady decline of that metal, the talk of overproduction and of necessary shutting down of mines.

In the iron industry there is reported further shading of prices of pig iron at leading markets, though inquiry is better at the concessions. The cotton goods manufacturing trade offers a sharp contrast to others in the reports of further advances in quotations of printed fabrics. Coal also is better called for east and west. The general level of commodity prices moved lower in August, mainly because of weakness in manufactured goods offsetting higher prices of farm products. These latter have, however, weakened this week, and values as a whole are lower than for nine months past. The money situation is also an irregular one, it being reported more active and firmer at the west, but rather easier at the east. More cautious buying in many lines east and west, and the general complaint of slow collections despite improvement at the south, are still attributed in part to this cause. The New York City bond issue proved fully as favorable as predicted, being oversubscribed five times, and was additionally satisfactory as demonstrating that there is plenty of money to be had at a price, but good effects of this sale were largely neutralized by a further sharp break in copper stocks and resulting unsettlement in other securities. Clearings reports show losses from a year ago, though outside of a few cities gains are still in the majority. Building in August showed increased expenditures at a majority of cities, but losses at large cities result in a net decline from August, 1906, and July, 1907. Building material lags, despite increased buying of lumber at the west, and prices tend to ease. August railway earnings point to a gain of at least 9 per cent. over the same month a year ago.

Crop reports are still irregular, but in no case will the more important crops show as large yields as a year ago. The reverse to this is, however, that the farmers fortunately situated as to yields are getting much higher prices this year than last. Telegrams to BRADSTREET'S from the northwest are that a good though not as large a crop of spring wheat will be gathered as a year ago. Advices as to that crop are, indeed, better from the northwestern cities of the country than from Chicago, which takes a less favorable view of the outcome in that section. Flax will be a good crop despite frost-damage reports. As to corn, the weather has been too cool or wet for best developments in ripening, and the late arrival of frost is a requisite for a good crop. In Iowa the plant is well out of danger; in Missouri warmer weather is needed; in Nebraska about two-thirds of last year's yield is indicated. In Ohio neither corn, wheat or oats will equal earlier expectations. Rain in the Pacific northwest has not hurt wheat as much as feared, and the crop outturn as a whole will be one of the best ever recorded. Timely rains have improved pasturage in that section and in the east, but dairy interests in the latter section have suffered from the prolonged drought.

Cotton crop reports are likewise irregular, ranging from talk of a shortage in Texas to only an average crop in Alabama and an excellent outturn in Georgia and the Carolinas. Dry weather continues in Texas, but temperatures are lower. A short crop is predicted in that state. In the lower Mississippi valley conditions are good. In Alabama the plant is reported to have deteriorated from its early good promise. In Georgia conditions are better despite some shedding, and in the Carolinas the outlook is one of the best in years. Picking is general, though later than usual. A long fall and late frost arrival will affect yields materially. Labor is scarce.

Speculative prices for commodities showed a reactionary tendency early this week, being helped therein by less than expected bullish government crop reports and less active export demand following the recent advance, but later tended to harden again on less favorable weather and crop reports. Wheat declined steadily early, partly on realizing on the late advance and partly on large exports from other countries, and while the government report at first was regarded as bullish, the realizing thereon was heavy, causing a drop of 2 to 3 cents to the low of the week, reached on Wednesday. Following cold weather reports on Thursday and claims of poor quality of grain harvested in the northwest, there was a rally of a cent from the lowest. Corn weakened early on failure of threatened frosts to materialize, and lost about 2 cents on futures up to Friday. Oats also weakened 2 cents.

Cotton was weak, with the course of prices pretty steadily downward throughout the week, futures losing 50 to 60 points, while spots lost 75 points from the high price ruling at the close of last week. Larger movement of new crop, better than expected crop reports, and, finally, the government report of condition August 25, were the moving features, aside from the great central fact that present prices are high for this period of the year—the highest, in fact, for many years. The revision of grades of cotton by the committee of the Exchange had a slightly unsettling effect upon quotations for the time being.

Generally speaking, the drift of commodity prices was toward a lower level in August, as nine out of thirteen groups receded, and the general index number on September 1 showed a decline of 1 per cent. from the level set on August 1. This declining tendency has proceeded pretty steadily since March 1, when the high level of the present movement was reached, being only slightly checked in the latter part of May, and finding the only real opposition in August in the shape of higher prices for farm products, which were affected by crop and weather conditions. The general index number on September 1 was $8.8297, which is the lowest number reached since November 1, 1906. Metals, raw textiles (except cotton and silk), hides, naval stores and live animals showed most weakness, while breadstuffs and dairy products showed most strength.

This week witnessed at San Francisco the practical cessation of relief measures, several thousand people living in public places seeking private quarters.

Although the success of the New York City bond issue was very favorably regarded, all bullish influences were overshadowed by the further decline in copper prices and reports that the mines of the Amalgamated Copper Company might be closed down. Heavy liquidation and short selling, with severe breaks in Amalgamated and other copper stocks, naturally depressed the general list, the Steel stocks in particular developing weakness. Considerable activity developed in the New York City 4½ per cent. bonds, which sold up to 103½ in the market after the allotments were announced. Foreign exchange has declined sharply, demand sterling being 4.85.50.

United States and Canadian wheat stocks combined increased slightly on September 1 as compared with August 1, the gain in the former stocks offsetting decreases in the latter. European stocks gained only slightly in August, as against a large gain a year ago. The combined American and European stock on September 1 gained only 4,200,000 bushels, as against 10,000,000 bushels in August a year ago, and the world's stock on September 1 was only 14,300,000 bushels larger than on the same date a year ago, and 34,400,000 bushels larger than on September 1, 1905.

Reports by the Agricultural Department as to leading crops show lower conditions and smaller probable yields than in 1906. All cereal crops are below the ten-year average, and the output of cereals this year is 14.4 per cent. below 1906. Wheat yields promise to be 14 per cent. smaller, corn 13 per cent. and oats 18 per cent. less than in 1906. Potatoes promise 7 per cent. less. Cotton conditions are below the ten-year average and about approximate those of 1905 at this date. There are, however, 5,000,000 more acres in cotton this year than then, so that a crop of 12,000,000 to 12,500,000 bales is possible if the crop, which is late, fully matures.

Pig-iron markets continue quiet, although there has been a somewhat better movement in basic, forge and foundry iron at the east, where the tone has improved. In the west and south the situation has not improved, and prices at the latter point are weaker, if anything. It is to be noted, however, that production is declining, that some furnaces in the Pittsburgh district and in the valleys have been blown out, and that the prospects favor a shortage of about 30 per cent. in the season's shipment of Bessemer ores; but, on the other hand, it is declared that a smaller tonnage will be required the coming winter and spring. Steel billets and sheet bars are scarcer and prices have hardened. Specifications on all finished materials are heavy. New demand for structural material is fair. The market for steel rails is being watched with interest for developments, but thus far little new business has been placed. Cast-iron pipe is in good demand, and now that New York City has successfully floated its bond issue, some large orders are expected. Old material is in a little better demand, but, on the whole, the markets are still dull and weak. Wire and wire products are in good demand. Copper, spelter, lead and tin are again lower. Copper is very weak, and prices tend to strike a lower level than the 16 to 16½ cents quoted for lake or the 15½ to 16 cents named for electrolytic, which compare with high points of 25.75 cents and 25.37½ cents respectively. While the market price is now within hailing distance of 15 cents, at which figure it was freely asserted a heavy buying movement would develop, nothing of the kind is expected, as the instability of quotations renders prospective buyers even more cautious, and in fact 12-cent copper is talked of. In any event stocks have accumulated in large proportions, and the financial strain of carrying such heavy supplies is proving burdensome. In order that conditions following the growth of supplies may be ameliorated, the leading interest has, it is stated, ordered a partial suspension of work at its mines.

Reports o BRADSTREET'S from sixty-seven American ies show an expenditure for building in August of $46,925,419, a decrease of 5 6 per cent. from August a year ago and of 8 per cent. from July, 1907. Forty of the sixty-seven cities show increases in expenditure as compared with August a year ago, but decreases at the larger cities of the country explain the net decline in all building.

Bank clearings for the week ending September 12 aggregate $2,669,796,000, 24 per cent. over last week (a holiday period), but 14.7 per cent. below this week last year. Outside of New York exchanges amount to $1,095,472,000, 17 per cent. over last week and 6.6 per cent. over the week last year.

Business failures for the week ending September 12 number 172, against 130 last week, 164 in the like week of 1906, 188 in 1905, 167 in 1904 and 170 in 1903.

Wheat, including flour, exports from the United States and Canada for the week ending September 12 aggregated 5,291,866 bushels, against 2,923,710 bushels last week, 4,953,216 bushels this week last year and 6,648,609 bushels in 1901. For the first eleven weeks of the fiscal year the exports are 34,500,982 bushels, against 30,625,847 bushels in 1906-07 and 69,603,818 bushels in 1901-02. Corn exports for the week are 677,135 bushels, against 507,104 bushels last week and 985,393 bushels in 1906. For the fiscal year to date the exports are 13,814,815 bushels, against 7,442,647 bushels in 1906-07.

IN CANADA.

Canadian trade is good, though some caution has been induced by crop and money market uncertainties, which are now apparently closer to solution. A fair wheat crop of good quality is now being harvested, and frost damage alone is feared. Collections still drag, particularly from the west, but less apprehension is felt as to the money situation. Drought has done some damage in the eastern provinces, particularly affecting the dairy industry by curtailing pasturage. Export trade is active and old grain is moving freely. Montreal reports trade brisk, millinery especially active, but western collections slow. Toronto reports wholesale and retail trade stimulated by the exposition. Travelers report caution in ordering, due to money uncertainties. Collections from the west show little improvement. Winnipeg reports wholesale trade good, a wheat crop of good quality being harvested, real estate less active and collections slow. Vancouver reports some effect of anti-Oriental disturbances upon trade. Labor is very scarce, and the shortage in coal and coke affects smelting operations. The expenditures for building at five Canadian cities for August aggregated $2,460,276, a decreace of 27.9 per cent. from the same month a year ago. Failures for the week number 22, as against 15 last week and 17 in this week a year ago. Clearings for the week aggregate $83,518,000, a gain of 18.3 per cent. over last week and of 3.6 per cent. over this week a year ago.

TRADE REPORTS.

At New York an active business is being done in cottons, silks and dress goods. Cotton goods are strong in price. Large orders have been received for silks and dress goods, and no cancellations of orders booked are coming in. In connection with dress goods, a large business has been transacted in ladies' fine cloths. Woolens for men's wear are in fair demand, but in this line a good many cancellations have been received; collections are somewhat backward. Woolen and worsted yarns, while holding steady in price, have considerably fallen off in demand, owing to manufacturers

having been supplied ahead and not being inclined to stock up at present high prices. Cotton yarns are in about the same condition, and spinners are not trying to force business. In the cloak, suit and waist lines business is steadily increasing, principally in orders for future deliveries. Collections are somewhat slow, but the trade anticipates a good fall business. Raw silk continues dear. Owing to scarcity of help and strike troubles in some of the larger throwing establishments, manufacturers are buying very conservatively. Woolen and cotton rags are still inactive, but prices are held firm and high. The wholesale millinery business has been satisfactory. Artificial feathers and flowers are also selling well. There is little change in the wholesale notion business. Trade conditions are normal, but collections do not show any improvement. Prices allow only a small margin of profit to pearl-button manufacturers, but they are well supplied with orders. Butter receipts are only moderate and the price has advanced ½ cent. Eggs continue firm. Business in leaf tobacco has been rather quiet. There has been no break in price, nor is one expected in the near future. Manufacturers of cigars are fairly busy on an active demand, and the retail trade shows improvement. Anthracite coal is in brisk demand, and the largest producers are working their collieries to their full capacity. In gas fixtures, fancy metal goods, hardware, tin and enameled ware, china, glassware and woodenware the volume of business is about normal, but complaint of slow collections is general, and many dealers who have for years past been taking advantage of discounts now take full time, and sometimes a little more. Interest in the metal market this week centers mainly in copper, the reduced price of which has not, however, brought out the anticipated orders, and the feeling obtains that a further reduction will be necessary to induce buying. Pig iron continues in fair demand. Manufacturers of structural steel report an active business and improved collections. Pig-lead prices have been reduced. Machinery dealers report a falling off in business and slow collections. Electrical goods are fairly active, but in this line also collections are slow. The hide market is dull and there is practically no trading in goatskins. Crude rubber prices are lower than they have been for some years, but buying is, nevertheless, inactive. Manufacturers of high-class jewelry find the volume of business about normal. In the paper trade there is a gradually increasing demand as the season advances, and prices, which have hardened in the past six months, are firm. Collections locally have been only fair, but out of town are reported good. In real estate, business is dull. In the building trade there is not much doing and few new plans have been filed. Conditions in the lumber and building-materials trades are rather unsatisfactory, demand still being limited. For some kinds and grades of lumber prices are good, but for other sorts they have fallen off. Cement has fallen off in price and stocks on hand are heavy, many contracts being held up and some railroad work stopped altogether. Wholesale lumber firms doing business throughout the country report business fairly satisfactory, notwithstanding the condition of the money market.

The following telegrams show trade conditions at the cities mentioned for the week ending September 13:

BOSTON.—Dry-goods jobbing is active, and there is demand from retailers for earlier deliveries than had been contracted for, goods in some instances ordered for delivery the first of October being wanted by the middle of September. Retail trade as yet is backward, weather being unfavorable for fall sales. There are, apparently, small stocks of last fall and winter goods in the hands of retailers. Cotton goods are still strong. Advances of ½ cent per yard on prints go into effect with jobbers September 23, shirting prints to be increased from 6¼ to 6¾ cents, and mourning and indigo blues from 6½ to 7 cents. Hesitation in buying for future requirements prevails, owing to extreme high prices and to tightness in money. Accommodation is granted by banks for usual requirements of good customers, but in some cases loans or renewals of notes have been refused. Leather remains strong, though buyers claim to have secured concessions in some lines. Shoe manufacturers expect the present season to be short. Shipments are still falling behind those of last year for the same period. There has been a quiet, steady demand for different kinds of paper, but fall business has not commenced. The close money market has had a tendency to restrict orders. Prices show a firm tone, and advances in some lines later in the season are talked of. Except in old paper, no increased activity in paper stock is apparent. Trade in electrical supplies continues of good volume, but complaints are made of slow payments. Business in furniture lines is somewhat ahead of last year, but collections continue slow. Business is reported light in northern and eastern lumber, principally owing to tightness of the money market. Southern lumber is quiet. Hardwoods are fairly active, with prices firm. Pig iron is dull. In anthracite coal the outlook is promising, there being a brisk foreign demand. Bituminous is active, dealers who have been holding off in expectation of lower prices now being eager for coal. Wholesale liquor dealers report an increased demand for rectified whiskies and fair demand for all grades of liquors. Brewers continue busy, and demand for beer and ale is steady. Leaf-tobacco dealers report fair business on all grades of leaf. Manufacturers are getting ready for fall orders. There has been a marked falling off in the receipts of butter, and the market is firm at advanced prices. A continued scarcity in fruit is noted, with the exception of apples, which are coming in more freely.

PROVIDENCE.—The jewelry business has started in in considerable volume for September. In the machinery and tool trade the volume of business is good, prices firm and some difficulty experienced in obtaining deliveries. Cotton goods are firm in price, with demand strong. Chemicals and dyestuffs are moving freely, with prices firm. Collections are somewhat slow.

PORTLAND, ME.—Fall trade is starting well and promises to equal last year. Reports from the Aroostook potato crop are encouraging, and the increase in acreage will about equal the shortage in the crop.

PHILADELPHIA.—Wool is inactive, though there is a fair demand for certain grades. Mills, however, are not disposed to stock up, and trading lacks snap. Prices are fairly steady. Cotton yarns are weak and collections reported only fair. Dry-goods jobbers report nearby trade somewhat off, but western and southern business is very good. Prices are stiff and collections slow. Flour continues high in price and hard to sell, buyers taking only what they actually need. Chemicals and dyestuffs are very dull, and the demand, except for staple lines, has fallen off very considerably. Prices are firm, but collections are reported very slow. Paints and glass move freely at good prices. Lumbermen report business rather dull and prices somewhat unsteady. There is general complaint in the trade about difficulty in making collections. The hide and skin market continues weak, there being little demand. Leather demand is fair, supply good and prices firm. Shoe dealers report moderate business, with no appreciable change in prices. Tobacco is selling somewhat better; the inquiries are much more numerous, but as prices are so high, buyers look further for something lower. Havana remedios first cap are quoted at 80 to 85 cents, second cap 60 to 65 cents. Zimmers, at 22½ cents asked, are in demand and hard to find. There have been a few sales of new Pennsylvania (sample just in) at 20 to 22 cents, scarcely enough to gauge the market. Liquor distillers are not disposing of goods very freely. The price of rye has been forced from 70 cents to 90 cents. Other interests have advanced cooperage from $2.25 to $4.25 a barrel, and the prospect of getting 20 per cent. more for the goods to be produced this fall is not bright. Spirits have advanced 2 cents a gallon a second time this fall. Wholesalers are dull, with collections slow. While there is no particular improvement in the iron trade, prices have not receded, and this is regarded as favorable, strengthening an impression that they may not go lower. The coal business is quite satisfactory, prices being firm, and indications for a good fall and winter trade growing stronger.

PITTSBURGH.—There has been some inquiry for pig iron during the week, but no transactions, and the market is comparatively lifeless. Furnaces, however, are running full, and consumers are urging shipment on existing contracts. Finishing mills continue actively employed on orders already in hand, and there is the usual amount of current business being received. Large buyers are holding off, and the situation in this respect is still a waiting one. Coke is firm, and there is a free movement. Pig-iron prices for spot delivery at the valley furnaces are as follows: Standard Bessemer, $22; chilled basic, $21; No. 2 foundry, $21.25, and gray forge, $21.25. Standard Connellsville furnace coke is quoted at $2.80, and foundry coke, $3.25 to $3.50, at the ovens. In general merchandise lines a satisfactory business is being done.

BUFFALO.—During the past week retail trade suffered some interruption owing to Buffalo's "Old Home Week" celebration, but in jobbing and wholesale lines the week compares favorably with the corresponding week of last year. Local manufacturers are operating to the full capacity of their plants, and there is an active demand for labor. In financial circles money is reported somewhat easier, but small investors still seem rather backward.

BALTIMORE.—The volume of fall trade continues very satisfactory in all lines, a pleasing feature being a material increase in the number of new accounts, millinery jobbers reporting a large number of these, and business in their line is the best for years. Umbrella manufacturers are busily employed, with an increasing volume of business despite the advance in prices. Shirt manufacturers report similar conditions. Harness manufacturers are ahead of 1906 in orders, but are somewhat behind with shipments. Manufacturers of clothing, while noting an increase in the volume of house business, expect the greater part of business for the season to be given the salesmen on their next trip, purchases now being of the filling-in variety. Shoe jobbers report sales in excess of 1906, with quite a number of North Carolina buyers in the market, who are ordering goods for immediate shipment. The trade expects an increased number of buyers from nearby points. In groceries, business for the week has shown an improvement both in country and in city. Flour still has an upward tendency. A material improvement is shown in spirits, with better collections. Distant business in fertilizers has not yet opened up fully, but moderate orders have been received from nearby points, and the general outlook is good for fall trade. Trading in crockery and woodenware is active, with slight improvement noted in collections. Brush manufacturers report good orders. In lumber, large stocks are on hand, with only a fair demand, receipts being larger than usual. General collections show but little improvement, but with the movement of the crops a change for the better is shortly expected. Bank loans are fully taken at 6 per cent.

CINCINNATI.—Trade in general is good, with dry goods leading. Many retailers are attending the yearly meeting of the Jewelers' Association of Ohio, and this has also helped trade. Manufacturers of shoes are busy and retailers are doing a good trade. Whiskey is quiet. Collections are backward. Fall trading is now on at retail, and the volume done has encouraged merchants to look forward to good results later. Corn has improved in the last few weeks, but will not be a full crop. Yields of oats and wheat are not up to the average, and quality not so good as usual. The tobacco crop will be large.

CHICAGO.—General trade has increased, and lines that do not show gains are holding their own. There is more caution used in the buying than at this time in recent years, interior distributers confining their purchases more to absolute wants, and prefer to buy frequently rather than to load up heavily at the start. The volume of business in dry goods, clothing and shoes is about up to last year's. Structural material is in active request and orders for 10,000 tons are in sight, and there is a larger tonnage likely to be placed in the near future. Railroads are taking small lots of rails, and consumers generally are buying supplies moderately. Demand for pig iron is limited to odd lots, and the market remains easy. Wire and nails are having a good sale. Increased calls for steam coal and for eastern anthracite coal are the features of the western coal trade, and prices are steady. For lumber there is more disposition to load up on the part of interior retailers, and there is a large call for local consumption, builders and box makers buying. Groceries are selling to a fair extent, with the aggregate no greater than last year. Butter and eggs are higher, with a healthy trade. Decreased receipts of cattle and sheep make a stronger market. Hogs sold well, with little change in prices and a slight increase in arrivals. Money strong, with an increase in shipments of currency to the interior. Collections are fair, but not so good as last year. Cool weather has retarded the maturing of the corn crop, and while there is a fair percentage of the area that is well advanced and is nearly out of danger from frost damage, the great bulk of the crop requires until after October 1 to place it past extensive damage by a severe frost. All reports of damage to the crop in western Iowa and Nebraska have been confirmed by the government report, which shows deterioration. The seven surplus states which raise the bulk of the crop have a prospect of 1,488,000,000 bushels, based on government data, a loss of 40,000,000 bushels from the August returns and of 232,000,000 bushels less than last year's final figures; the total crop is 409,000,000 bushels short of last year's, the greatest loss being in Iowa. Losses in spring wheat have been fair, and the government suggests 164,000,000 bushels, a reduction of 5,000,000 bushels from last month and of 11,000,000 bushels from last year. The oat crop shows sensational losses, being estimated at 763,000,000 bushels, a drop of 113,000,000 bushels in the past month and of 199,000,000 bushels from last year. The twelve largest states raised 590,000,000 bushels, or 176,000,000 bushels less than last year. Flax in the northwest is being cut, and the late crop has received slight damage from frost. In the Canadian northwest unfavorable weather prevailed, but the greater part of the crop there has been cut, except in the western districts. Grain is moving marketward in liberal volume, deliveries of oats exceeding last year's.

INDIANAPOLIS.—Wholesale dry-goods and hardware houses report excellent trade. While collections during the summer months were slow, they are now rapidly improving.

TERRE HAUTE.—Retail clothing sales are good. Dry goods and notions are active at wholesale. Collections are fair.

LOUISVILLE.—Business in jobbing and manufacturing lines is fairly good. Clothing manufacturers are preparing samples for spring, but orders are few. Dry-goods houses report business equally as good as last year, and orders from visiting out-of-town merchants are larger than in 1906. Whiskey dealers and wholesalers report business opening up in fine shape. Orders for fall are coming in in unprecedented size. Fine whiskey of three years and older is held at firm prices, averaging 25 cents a gallon over 1906. Drugs and groceries report a good business, both reporting about 10 per cent. over a year ago. Collections are improving.

ST. LOUIS.—Nearby traders from Missouri and Illinois are now in the market. While orders are being placed freely, there is also considerable care being exercised. Cotton goods, dress goods and silks are in demand for immediate delivery at firm prices. Jobbers of hats, gloves and kindred lines have had a good trade. Demand for ladies' ready-to-wear suits exceeds all previous years. Orders now on hand will keep manufacturers busy until early spring. Manufacturers of shoes have had an exceptionally good season, but are behind on orders for fine shoes. Groceries and drugs continue active at firm prices. Lumber and hardware show a slight falling off, but the increased prices in some lines keep the average well ahead of last year at the same period. Retail trade, especially among department stores, is quiet, it being too late to buy summer goods and too early to buy winter goods. Flour continues active at advanced prices. Millers have orders booked for future delivery which will keep them busy until spring. Export trade is the best in years. On the whole, the business outlook is very encouraging. Collections range from fair to good, although in some sections where crops are late short extensions have been asked. Money is in good demand at 6 per cent. Banks are taking care of regular customers and buying but little outside paper. Cold, wet weather during the past few days has done much to retard the maturing of corn, but so far no damage has resulted from it. With a few days of hot, dry weather, the crop, which is exceptionally large and fine, will be out of danger.

ST. JOSEPH.—The condition of corn in Missouri continues above the average and better than last year. In Kansas the condition is partly good. In some western counties the crop is estimated at 40 to 60 per cent.

KANSAS CITY.—Jobbers in dry goods and kindred lines report an unusually good season. The increase in volume of sales has been unprecedented. Business in other lines has fully met expectations. Retail trade is active and collections range from fair to good. Money is in good demand at increased rates. The weather continues favorable for maturing corn.

MILWAUKEE.—The state fair this week has brought many country merchants here, who have been placing orders quite liberally, and retail trade was also stimulated. Collections are fair.

SIOUX CITY.—The live-stock fair induced numbers of merchants to come to the city, and jobbers and retailers have been busy. The weather is fine. There is no frost, and corn is practically clear of damage. Rain is needed for pastures. Fall plowing is in progress.

DAVENPORT.—Wholesale and retail trade is fair. The weather is fairly cool, but sufficiently

warm to ripen corn. Collections are fair. Demand for money is good.

ST. PAUL.—All lines are doing a brisk business. Many large orders for dry goods have been placed, which were held back on account of the crop situation. The increase of business over last year is general in all lines. Collections are good at this time, due to the movement of grain at present high prices. Ninety cents for barley is the price to-day. The outlook for future business and the cleaning up of accounts is very favorable. Flax is likely to be a good crop, despite the rumors of injury by frost. Corn is not relied on greatly in this territory and it is quite late, but the ears are on green stems. Frost before the 25th will affect it.

MINNEAPOLIS.—Trade in general is more quiet than last week, though some state fair visitors stayed over until this week and placed some orders. Business, on the whole, is in a healthy condition, with good prospects. Flour is looking up, though buyers are still backward, as is usual at this season, when new wheat will soon be a factor. Building operations are very active and all material is in demand. Wheat harvesting is complete, and the yield will probably be fully as large as anticipated. Estimates of 175,000,000 bushels for the three states are believed to be conservative. Yields of other cereals are large and of excellent quality.

OMAHA.—Trade in all leading lines equals expectations. Retail trade is seasonably good, although a little slow. Collections show some improvement. Corn is maturing under favorable conditions. The crop will be comparatively light in proportion to the acreage, and best authorities say the yield will only be about two-thirds of last year's crop.

LINCOLN.—Wholesale and retail lines report fair business and collections.

SIOUX FALLS.—Trade and collections are good. Favorable weather prevails for threshing wheat and maturing corn, a fair crop of which is assured.

CHARLESTON.—Trade is good in all lines, and merchants are very much enthused over the crop outlook. Cotton is opening faster than it can be picked, and in some sections pickers are receiving more than 60 cents per 100 pounds, which is the prevailing price. Collections are fair.

RICHMOND.—Wholesale dealers in dry goods and notions have fall shipments well under way, and some filling-in orders are noted. The amount of business already exceeds the average. Local jobbers of railway and machinists' supplies are active, and through the season have done a larger business than usual. Continued favorable reports regarding cotton and tobacco crops in Virginia and North Carolina are being received. Retail trade is dull. Collections show no improvement.

SAVANNAH.—Cotton is being marketed rapidly and is of better grade than last year. Collections are fair.

AUGUSTA.—Retail trade is fair and wholesale is improving. Cotton picking is active, and with a late fall a good crop is anticipated.

ATLANTA.—Jobbers in Christmas goods are beginning to receive a good volume of orders, and believe their trade this year will equal, if not exceed, that of last year. Collections show a slight improvement, but are still dragging to some extent. Jobbers, however, are optimistic. Cotton appears to be in good condition, but some complaints are heard of bolls dropping off on account of the recent dry spell.

MACON.—Crops are in good condition. The outlook for fall trade is good.

BIRMINGHAM.—Southern foundry pig iron No. 2 market is weak. Coal is not very active. Lumber continues to show a decline in prices. Trade in general is inclined to be somewhat dull, with slow collections. The cotton crop is short.

MOBILE.—The movement of cotton has now begun in earnest. It is about ten days behind last year, but the volume compares favorably with the opening of the season last year. Trade in all lines is brisk. Jobbers are looking forward to a good fall trade. With the movement of cotton, collections are improving rapidly.

MONTGOMERY.—Wholesale dealers in dry goods, clothing and shoes report business as fair. Trade is quiet in grocery and other lines. Retail trade is poor and collections are slow. Conservative authorities estimate a depreciation of 20 to 25 per cent. in cotton from first reports. Other crops are reported to be in a fairly satisfactory condition.

CHATTANOOGA.—Trade conditions are lively. Building is active.

MEMPHIS.—Cooler weather stimulates retail trade. Wholesale business compares favorably with the same time last year. Collections are slow. Cotton is opening rapidly, and picking is under way in certain sections.

NEW ORLEANS.—Both retail and jobbing trade is of good volume. The outlook is encouraging. Crops are promising, there being no unfavorable conditions so far, except a scarcity of labor.

FORT WORTH.—Drought is still unbroken, but the temperature is lower. A cotton-crop shortage is expected. Trade is only fair, and collections are slow.

DALLAS.—Trade shows considerable improvement, and collections are better. Fall trade is opening up well.

WACO.—Trade is good, with some improvement in collections. Dry weather continues, and the short crop of cotton will soon be out. Farmers, as a rule, are accepting present prices.

SAN FRANCISCO.—The thousands of refugees who have been housed on public parks have been moving into private quarters and relief work is practically at an end. The political situation shows a steady improvement. Collections are still slow.

SPOKANE.—The damage to wheat from rains is much less than was thought to be the case. Harvesting is being rushed. Help is scarce. Business is active, and collections are about the average.

TACOMA.—Wholesalers report an increased demand in all lines. Good rains have been of great benefit to dairy interests. Collections are fair.

PORTLAND, ORE.—Wholesale and retail trade continues active, with good collections. Building operations show a marked increase over previous years. The Pacific northwest will harvest a record crop this year.

TORONTO.—Wholesale houses have been busy attending to visiting customers at the annual exposition. The net result was the booking of large sorting orders and a very decided impetus to the retail trade of the city. Travelers report excellent business from all directions, although buyers are using caution in placing orders. This is not so much due to any fear regarding future business conditions as it is to the recent tightness in money. There is now a feeling that the money situation stands in the way of some amelioration, although cheap money is by no means looked for for some time yet. Collections do not show much improvement. From Ontario points they are fairly good, but from the west they are still slow, and no doubt they will continue so until the crop is well marketed. The dry-goods trade still shows great activity, and values of all lines are firm. The outlook favors a good sorting trade in all lines, although this depends largely upon crop conditions in the west. In Ontario the crops have been fair to good. Drought in the latter part of the season did considerable damage. Large shipments of groceries are being made. The firmness in canned goods is a feature. Salmon prices are particularly firm. Canned fruits are also opening higher than last year. Fair quantities of fresh fruits are arriving, but prices are firm. Provisions are steady to firm. Butter and cheese are firm owing to the continued bad condition of pasturage, but rains during the latter part of the week may have some effect. Wool is quiet, with an inclination toward firmness.

MONTREAL.—Business has assumed a rather more pronounced air of cheerfulness. There has for some time been a feeling of apprehension regarding agricultural production, and tight money has also had its effect. As to the first, the result to the farmers of the year's operations has been such as to warrant good, healthy trade conditions, although the total return will probably fall behind last year. There is now talk in authoritative quarters that the situation in the money market is somewhat relieved. It is claimed the banks, in preparing for the crop movement, took greater precautions than have proved necessary and that easier money is now in sight. Wholesale and retail trade here is fairly brisk. City trade has been quite active, and travelers report good business in the country. Collections are still inclined to be slow. All lines of dry goods are moving well. The fall millinery trade was heavy, large numbers of buyers having been present. Values generally hold very firm. There is, however, but little speculative buying. Orders, while good, reflect a healthy tone of conservatism. The hardware trade holds up well. Butter and cheese have advanced; the export demand for the latter is quiet. The shipping trade is active. Large quantities of grain are going forward, and there will be plenty of old grain here to keep vessels busy until the new crop is ready to ship.

VANCOUVER-VICTORIA.—Trade has been to some extent affected here during the past week by the race riots. This, however, has been little more than local, and throughout the province business in all lines continues to move briskly. Much depends upon the outcome of the anti-Oriental agitation. Labor is badly needed in all parts of the province. All lines of wholesale goods are going forward well, and retail trade is brisk. Orders for fall and winter goods continue heavy. Values are firm in all lines. The shortage of coal and coke is still affecting the smelting industry, and the matter is steadily becoming more serious. Collections are generally good.

WINNIPEG.—Trade here continues to reflect the feeling of satisfaction, which is general, regarding the crop situation. Harvesting is well under way, and nothing but frost is to be feared. The quality of the wheat is generally excellent. Wholesale trade is showing a good tone, and retail business is fair. There is now very little real-estate speculation, compared with what was being done a short time ago, although there is considerable legitimate trading. Collections are still slow from most districts. Reports from ranching districts say the year will be a profitable one for cattle men. The stock is in good condition and heavy shipments are going east, while prices are good. Grain prices are also holding up well.

Money Market.

The subscription for the New York City $40,000,000 bond issue, the final payment by participants in the Union Pacific convertible bond underwriting, which amounted to around $37,000,000, and the maturing of the call for the redemption of the Japanese government 6 per cents, coming together on last Tuesday, naturally caused a withdrawal of funds from the New York loan market in the early part of the week. As a result, the call-loan rate touched as high figures as 6½@6 per cent., with renewals at 6 per cent. The rate, however, dropped by Wednesday to 3¾@3 per cent., when the funds temporarily tied up in the above operations were released. The time money market was rather narrow but showed no special change, six months' funds commanding 6 per cent., while for three to four months 5¾@5½ per cent. were the quotations, there being a somewhat firmer feeling as to such arrangements toward the end of the week. Commercial paper continued very dull, with 7@6½ per cent. as the quotations, but local institutions are out of the market, and it is noted as one of the features of the situation that Chicago banks are understood to have bought some prime paper in New York at 7 per cent. Foreign houses are also understood to have been lenders on a moderate scale, the selling of finance bills being credited with a share in causing the further sharp decline in foreign exchange. The banks continue to gain money from the Treasury, and apparently lost only a small amount to the interior, the estimated net gain being over $2,000,000.

New York Banks.

Such changes in the averages as were shown in the New York Clearing House statement of last Saturday were unimportant. At the same time the decrease of $1,426,800 in cash was directly opposite to the estimated actual movement of currency for the week, according to which the banks should have gained around $2,000,000, this discrepancy being possibly due to unreported local causes. An increase of $611,800 in the loans reflected the increase of stock market activity, while the deposits gained $170,800, or over $500,000 less than the difference between the changes in loans and cash respectively. This made the reserve requirements only $42,700 smaller, and the surplus reserve was consequently reduced by $1,384,100. The figures of the statement compare as follows with those of the preceding week:

	Sept. 7	August 31	Changes
Loans	$1,088,597,200	$1,087,985,400	I. $611,800
Specie	210,317,400	200,889,500	D. 572,100

Bank Clearings.

[By Telegraph to BRADSTREET'S.]

BRADSTREET'S Bank Clearings Report for the week ending September 12 shows an aggregate of $2,669,796,000, as against $2,143,846,000 last week and $3,119,979,000 in the corresponding week last year. Canadian clearings for the week aggregate $83,518,000, as against $70,556,000 last week and $80,591,000 in this week a year ago. Following are the detailed returns by cities for this week and last, with percentages of increase or decrease as compared with this week in 1906:

	September 12	*Inc.*	*Dec.*	*September 5*
New York	$1,574,324,000	....	24.7	$1,213,555,000

Foreign Exchange.

Rates for all classes of exchange have undergone a decided decline this week under the free offerings of commercial bills which are coming out, supplemented by considerable amounts of finance bills, some of the latter being presumably drawn in connection with foreign subscriptions to the New York City 4½ per cent. loan. The inquiry for remittances was also light, and it was noted that the easier tone of the New York money market toward the end of the week had no effect in staying the downward tendency in exchange. Continued improvement of a substantial kind in the foreign financial market was of course a factor, and satisfaction was shown in relation to the favorable showing made by the Bank of England. From the beginning of the week the tone of the market was heavy, demand sterling falling from around 4.86.25 on last Monday to 4.85.75 by Wednesday, while on Thursday there was a violent break, carrying the quotation for sight bills to as low as 4.85.20, with corresponding weakness in other classes of exchange. It will be noted that this week's minimum for demand sterling is the lowest since last April, when the actual rate was around 4.84, and when gold was taken from London for New York. On Friday there was a moderate rally in the quotations, due, apparently, to covering of short sales.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Sept. 7	*Sept. 9*	*Sept. 10*	*Sept. 11*	*Sept. 12*	*Sept. 13*
4.83½ @ 4.87½	4.83½ @ 4.87½	4.83½ @ 4.87½	4.82½ @ 4.86½	4.82½ @ 4.86½	4.82½ @ 4.86½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.86.20 @ 4.86.25	4.86.20 @ 4.86.25	4.86.00 @ 4.86.15	4.85.70 @ 4.85.85	4.85.20 @ 4.85.50	4.85.40 @ 4.85.60

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.82.40 @ 4.82.50	4.82.30 @ 4.82.50	4.82.15 @ 4.82.25	4.82.00 @ 4.82.10	4.81.60 @ 4.82.00	4.81.65 @ 4.81.70

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.86.15; commercial bills, 4.81¾; francs, 5.21¼ less 1-64@5.17½ less 3-32; reichsmarks, 94 less 1-32@94⅞ less 1-32.

The Bank of England's discount rate is unchanged at 4½ per cent. Its weekly return on Thursday showed an increase of £490,502 in the gold held, and the proportion of reserve to liability rose from 50.03 per cent. to 51.28 per cent., which last is the highest percentage thus far in 1907. In the London open market call money is easier at 2 per cent., and discounts at 4 per cent. The Bank of France this week reported a decrease of 3,700,000 francs in gold. Its rate is unchanged at 3½ per cent., the Paris market for discount being 3⅜ per cent. At Berlin the bank rate is still 5½ per cent. and the market 5 per cent.

New York Securities Market.

Favorable developments were by no means lacking in connection with the financial situation and the stock market, embracing as they did the success of the New York City bond subscription on last Tuesday, the decision of the lower court in Pennsylvania against the constitutionality of the 2-cent fare bill, and the fact that the bond subscription, with the winding up of the Union Pacific convertible bond underwriting, produced only a temporary hardening in money rates. The disposition which Wall street had exhibited at the close of last week, to take a more cheerful view and to look on the probable favorable outcome of the city bond subscription as marking a turn in the tendency of investors to keep out of the market, was set at naught, however, by developments in connection with copper quotations and the heavy decline in the price of Amalgamated Copper, accompanied by similar severe recessions in American Smelting and other members of the same group. This movement got under way at the beginning of the week, a rather significant indication of the non-success of the reduction of copper to 18 cents as a means of stimulating buying by consumers being supplied by the cutting of the Calumet & Hecla dividend for the quarter from $20 to $15 per share. The weakness of the copper stocks, however, assumed an aggravated form as the market progressed, and the break became still wider in its dimensions on reports that the Amalgamated Copper Company contemplated shutting down its mines at Butte with a view to stopping the piling up of unsold stocks of the metal, and possibly obviating serious questions as to wages with its laborers at that point. There was a great deal of bearish activity, without doubt, but the selling of Amalgamated and other similar stocks had the unmistakable appearance of liquidation. As a net result, Amalgamated fell from 71 to 58, the latter being the lowest price it has touched since 1904, and is less than one-half its market value in the month of January last. Among other factors which contributed toward the break in the copper shares was the circulation of renewed reports that Mr. H. H. Rogers was seriously ill. In the face of this demoralization in a group of such speculative importance the rest of the list could not be sustained, and some bullish manipulation which was attempted early in the week in the Hill group—Northern Pacific and Great Northern—had to be abandoned; nor were the Harriman stocks supported, Union Pacific developing heaviness with the rest, while one of the features of the later transactions was the renewal of bearish activity in the United States Steel shares. The argument in this connection was that the decline in copper and other metals might extend to the iron and steel industries. The New York market also paid some attention to the position of the Philadelphia market, which on last Thursday became decidedly demoralized, with heavy liquidation and declines in local stocks, such as Philadelphia Rapid Transit and United Gas Improvement. On Friday there was further professional bearish manipulation with renewed weakness during the morning hours, followed, however, by a sharp rally in the later trading.

Boston Stock Market.

Prices of principal stocks, with volume of transactions, on the Boston Stock Exchange, have been as follows:

	Price		Sales

Boston Shoe and Leather Market.

The leather market is holding up strong in spite of the weaker condition of the hide market. It is claimed that comparatively few hides were bought at the extreme high prices, most of the stock now finished having been bought when hides were not far from present levels, and concessions will not be possible for months to come. Buyers claim to have found some weak spots in side leather and in rough and finished splits. Sole leathers are firm. Hides are quiet. Sole-leather tanners have bought sufficient packer hides to relieve the Chicago market, but side-leather tanners are holding back for better terms, buying being only from hand to mouth. Shoe manufacturers are working their shops on full time, but all expect the season to be short. Mail orders are coming in, some urging great haste in shipment, but the character of the orders indicates continuance of very conservative buying. The *Shoe and Leather Reporter's* figures, giving shipment of shoes from Boston, are as follows: Last week, 80,066 cases; preceding week, 91,006; last year, 87,636; total for 1907, 3,389,849; total for 1906, 3,538,036; decrease, 148,187.

Wool Markets.

There appears to be a feeling of greatly increased confidence in the market, more buyers are looking around, and there has been a larger amount of wool actually sold for the past week. The financial situation seems to have cleared to an extent which will permit of larger operations by the mills, though some of them are still buying only as the wool is actually needed; but, on the other hand, some of the largest manufacturers are taking lots of desirable wool whenever it can be obtained. The sales of the week have been largely in territory wools, with worsted wools having the best demand, though clothing wools have sold fairly well for the finer grades. Among the sales of the week was a large lot of Montana wool in the original bags at 25½@26½ cents, and Idaho at 24 cents, in the original bags. Idaho fine staple sold at 25 cents, quarter blood territory at 26 cents, and half and three-eighths blood Wyoming and Idaho at 26@27 cents. Idaho clothing was moved at 22 cents, Utah clothing at 22½@23 cents, and No. 3 valley Oregon at 25 cents. Best eight months Texas sold at 22@23 cents, with ordinary at 20@21 cents, twelve months selling, to arrive, at 27 cents. California wools were very quiet, middle counties selling lower at 21@23 cents. Fleeces are scarce, but fine washed delaine sold at 39@39½ cents for Ohio. About 40,000 pounds Ohio unmerchantable delaine sold at 33 cents, with unwashed delaine at 31@32 cents. About 150,000 pounds quarter blood fleeces brought 30@31 cents, with half and three-eighths blood Ohio and Michigan at 30@34 cents, half blood Ohio at 33½ cents, XX Ohio at 35 cents and X Ohio at 33 cents. New Zealand crossbreds, 44s to 46s, were in fair demand and sold at 41@42 cents, with South American quarter blood at 35 cents. The Australian season is now open, and many buyers will attend the sales. The sales at Sydney opened last week, with prices from 7½@10 per cent. higher than last year. The Melbourne sales will open October 8, and the others will follow closely. It is estimated that the Australian clip this year will not be more than 50,000 bales larger than last year. The New South Wales and Riverina wools are rather poor, being heavy, short and tender. The Victoria wools are of good quality, though not of so long staple as last year.

THE TURBINE ENGINE.

"As in the case of most great inventions, the principle of the far-famed 'turbine' engines which drove the Lusitania across the Atlantic is almost as old as the hills," says the *Evening Sun*. "In brief, it is simply that of the old-fashioned and perennial windmill, with steam substituted for wind as a driving power.

"Consequently, it may be remarked, every old canal boat at Coenties slip with a creaking windmill to pump out her bilge water can claim relationship with the first lady of the seas, whose engines are blown around by steam in plain windmill fashion, for all the magnificent and wonderfully complicated machinery they contain.

"From the inventor's standpoint, of course, it was one thing that the principle of the turbine was blatantly displayed on every hillside in the shape of revolving windmills and quite another to think of applying it to a steam engine. As might be expected, the development of the turbine steam engine has been slow and often delayed by disheartening failure. Even to-day, when the power of the mammoth Lusitania has driven a white cone before her 2,800 miles cross seas, the new type of engine is still on trial in the eye of engineers, and much is yet to be proved about them before their supremacy over the old-style engine is assured.

"Every one knows by this time that the 'turbine' engines of the Lusitania are radically different from the old-fashioned engines on locomotives and elsewhere. Just what the difference is may not be so well understood. The word 'turbine' in itself conveys very little idea to the lay mind, and the word 'reciprocating,' which is the technical name for the old-style type of engine, is a terrible name to hand out to an ignorant public thirsting for knowledge. Let it be said at the outset that 'reciprocating' means to engineers nothing more or less than a back and forth motion, as distinguished from a circular motion.

"Oddly enough, if any one happened to be cast away on a desert island and wished to invent a steam engine, the chances are ten to one that, given no knowledge of how one operates, he would get to work on the theory of the new turbine as the simplest and most obvious idea. To the lay mind, the old-style 'reciprocating' engine, which James Watt invented more than a century ago, and which engine is in general use to-day, seems much more complicated and harder to understand.

"The theory of the 'reciprocating' engine can best be illustrated by blowing into a tube, first on one end and then on the other. Obviously anything that fits fairly tightly in the tube will be moved back and forth by the air pressure. This is exactly the to-and-fro motion which is obtained in an engine cylinder by letting steam blow first into one end and then into the other, driving a 'piston' to and fro. Every locomotive and every steamboat engine (except for the turbines) works in just that way.

"Right here occurs one trouble with the 'reciprocating' type of engine, which, as will be seen later, the turbine eliminates. As stated above, the old-style engine sets up a to-and-fro motion. Now the wheels of a locomotive, of course, revolve, as do also the paddle wheels of a ferryboat and a sound steamer and the propellors which drive the ocean liners.

"Therefore, the to-and-fro motion must be changed to a circular motion before it can be put to use in turning locomotive wheels, paddle wheels or propellers. Hence, the device of a 'crank,' which necessarily is present in locomotives and steam vessels in some form. The perpendicular rod in a sewing machine, attached at one end to the foot-rest and at the other to the circumference of a wheel, is an obvious example of a crank. The bottom end moves up and down only; the top end describes a perfect circle.

"Turning from the old-style reciprocating engine to the new 'turbine,' it will be seen at once that the new engine is radically and essentially different in its operation. Also, it embodies much the simpler and more obvious idea of the two, it would seem.

"In the turbine the steam is blown upon revolving blades, exactly as the wind blows on a windmill. It therefore sets up at once a circular motion, instead of starting a to-and-fro motion, as the old-style 'reciprocating' steam engine does. The engine can therefore drive the propellers (in the case of an ocean liner) directly, and all the friction and strain of a 'crank' are eliminated.

"Of course the engines on the Lusitania resemble a windmill about as much as a locomotive resembles a wheelbarrow. But the underlying principle is unchanged. If one pictures a dozen windmill wheels placed one behind the other in a row and all attached to the same shaft, and then conceives of them as placed within a long tube, an approximation of the turbine engine is obtained. Steam driven in at one end will obviously strike all the blades of the wheels in succession and set the whole mass of them spinning together.

"In the marine turbine the shaft to which the steam blades are attached is a continuation of the same shaft to which the propellor is attached, the revolutions of which in the water astern drive the vessel ahead. One improvement, to be found in the Parsons turbine used on the Lusitania, would almost suggest itself. As the steam strikes a slanting blade it is driven off on an angle away from the shaft toward the tube, and in order to deflect it again so that it will strike the next blade behind straight on, a stationary blade is affixed to the interior of the tube at the proper angle and spot. With the addition of these stationary blades the essential apparatus of the Parsons turbine is complete."

Remington
Billing Typewriter

What It Does

It writes your bills with double the speed of the pen.

It writes bill and charge sheet at one writing—no more need for separate charge entries.

It writes at the same time any additional charge or order copies that your system may require.

It adapts itself perfectly to your system or the needs of any business.

It improves system, insures against errors—makes short cuts which were impossible under former methods.

It extends the field of the typewriter to form and tabular work of every kind and description and always with an immense saving of time, labor and expense.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 21, 1907.

Since the allotments of the New York City 4½ per cent. fifty-year bonds were announced a week ago, those securities have been the object of a buying movement of no small dimensions and have displayed a corresponding degree of strength. While the average price at which the successful bids were awarded was only about 102, the price in the open market has steadily risen, and toward the end of the present week transactions at as high as 106⅝ were recorded. This movement cannot be charged to covering of short contracts made by people who had the temerity to sell the new bonds in advance of the allotments. It would seem, in fact, to proceed mainly from investment buying by people who are in command of capital which they desire to place in a safe and satisfactory way, but who, in view of the agitation against railroad and other corporations, hesitate to put their funds into securities of the latter class. At the same time the strength of the New York City bonds has not failed to give a more cheerful tone to the bond market at large. It cannot be said that any marked demand for securities of this description has as yet made its appearance. Dealings in bonds are still restricted, the conditions in that respect reflecting the high rates which prevail for loans and the general disposition to let railroad securities alone for the time being. On the other hand, it may be remarked that some issues, notably the new Union Pacific 4 per cent. convertibles, are exhibiting a certain amount of strength. In the latter case the advance is regarded with a good deal of interest because of the recent dissolution of the underwriting syndicate and the distribution of the bonds among the participants therein, a fact which ordinarily would have been followed by a decline, rather than an improvement, in the prices of these securities.

It appears that the date has been set for the convening of the Philippine National Assembly. That body, under the terms of a proclamation issued this week, will meet on October 16. It goes without saying that the occasion will be a notable one in the history of the islands. One of the matters worthy of notice is that there is a prospect of the passage of a public utilities law based upon the recent railway rate legislation of Congress. This is the view of the outlook taken, it is said, by the members of the Philippine Commission. It appears that the insular ship subsidy law has proven highly successful in operation, and that while only a comparatively small appropriation has been involved, a decided improvement in the service has been effected. The proceedings of the Assembly ought also to furnish information to the people of the United States, to whom the management of colonies at a distance is as yet practically an untried experiment. There would seem to be much to be learned both as to what to do and what to avoid doing as the result of even our brief tenure of the title to the islands.

On Tuesday last the representatives of the Central American states signed in Washington a protocol providing for the meeting of a conference in the near future to settle matters in issue between the republics. No precise date for the meeting of the conference has been fixed, for the reason that a month or more will be required for the delegates to get to Washington with such instructions as their governments may require to carry with them into an international conference. So far as can be learned, no special provision has been made for representation at the conference, the understanding being that each country will have one vote. It is understood that while the United States and Mexico will give the conference any assistance in their power, they will studiously refrain from interfering in the proceedings in any way. It is to be hoped that the outcome will justify the time and thought and patience already expended upon the project, which has long engaged the attention of the authorities at Washington. If so, the work will carry with it its reward, for the constant liability to trouble in the strip joining the two Americas has been a serious weakness in the political system of the new world, and the statesmen who will remove the condition will deserve well not only of their age but of the time to come.
